Planets And Satellites:

The sun, its planets and their satellites Edmund Ledger, 1882 **Orbiting the Sun** Fred Lawrence Whipple, 1981
Incorporates data collected by the Viking Mariner Voyager Pioneer and Russian space missions and is accompanied by spectacular photographs Planets and Satellites Robert Estalella, 1993 Discusses the characteristics of the nine planets of the solar system describing surface features lengths of days and natural satellites Includes suggestions for making a model of the solar system The Dynamics of Natural Satellites of the Planets Nikolay Emelyanov, 2020-10-16 The Dynamics of Natural Satellites of the Planets is an accessible reference for understanding the celestial mechanics of planetary moons through the lens of both theory and observation Based on decades of research by the author the book utilizes state of the art observations of the natural satellites in the solar system to establish models measurements and calculations to better understand the theory of the satellite movement and dynamics It presents an extensive set of study methods and results on the motion of natural satellites of the planets and includes reviews and references to related publication for further explanation By relating observations to numerical theory the book serves as a quick and comprehensive reference for applying the theory of orbital dynamics to observational data on orbits and physical properties of the natural satellites in order to formulate state of the art explanations and models particularly for determining the parameters of satellite motion Combines astronomy and celestial mechanics providing astrometric data from observations to inform methods and models for predicting natural satellite dynamics Includes both theory and observation in one place and presents new models based on observations Organized into small sections each providing specific measurements calculations or models making it a quick and comprehensive reference Planetary Satellites Joseph A. Burns, 1977 In this important source book on natural satellites thirty four distinguished contributors from various fields of satellite astronomy offer a thorough examination of Orbits and Dynamical Evolution Solar System Moons Jürgen Blunck, 2009-09-19 Starting from Mars outward this concise handbook provides thorough information on the satellites of the planets in the solar system Each chapter begins with a section on the discovery and the naming of the planet s satellites or rings This is followed by a section presenting the historic sources of those names The book contains tables with the orbital and physical parameters of all satellites and is illustrated throughout with modern photos of the planets and their moons as well as historical and mythological drawings The Cyrillic transcriptions of the satellite names are provided in a register Readers interested in the history of astronomy and its mythological backgrounds will enjoy this beautiful volume **Planets and Satellites** Gerard Peter Kuiper, Barbara M. Middlehurst, 1961 Satellites of the Outer Planets David A. Rothery, 1999 Extensively revised and updated this new edition of David A Rothery s acclaimed geological guide to the outer solar system includes results and close up color and black and white images from both the 1995 1999 Galileo mission to Jupiter and the Voyager space probe Rothery a noted planetary scientist explains the geological aspects of the major satellites of the outer planets from Jupiter to Neptune and the Pluto

Charon system In particular he shows how tectonic and volcanic processes driven by heat from within have shaped the rigid outer layers of these worlds Rothery also discusses the similarities and differences among them and the ways in which they resemble Earth like planets This fascinating book is written in an introductory style ideal for first or second year college courses Amateur geologists and astronomers will also find its insights rewarding

Habitability of Other Planets and Satellites Jean-Pierre de Vera, Joseph Seckbach, 2013-07-30 Is the Earth the right model and the only universal key to understand habitability the origin and maintenance of life Are we able to detect life elsewhere in the universe by the existing techniques and by the upcoming space missions This book tries to give answers by focusing on environmental properties which are playing a major role in influencing planetary surfaces or the interior of planets and satellites The book gives insights into the nature of planets or satellites and their potential to harbor life Different scientific disciplines are searching for the clues to classify planetary bodies as a habitable object and what kind of instruments and what kind of space exploration missions are necessary to detect life Results from model calculations field studies and from laboratory studies in planetary simulation facilities will help to elucidate if some of the planets and satellites in our solar system as well as in extra solar systems are potentially habitable for life
