**Plant Tissue Culture** Sant Saran Bhojwani, Vibha Dhawan, Renu Arora, 1990 The first volume of this Plant Tissue Culture PTC bibliography published in 1986 covered the literature from 1900 to 1985 This supplement to the PTC bibliography covers the papers and books published in the period 1986-1989 with some references of 1985 and before which were not available when the original volume was compiled The detailed Introduction to this volume includes a table with a graphic presentation of the trend of research in the field of PTC during this 5 year period It is interesting to note that during the past five years alone about 6000 papers have been published which is almost half of the literature published from 1900 to 1985 Another table lists the periodicals and their respective volumes surveyed for this book Appended is an Index to Plant Names which facilitates the search of the literature either subject wise or species crop wise

**Plant Propagation by Tissue Culture** Edwin F. George, Michael A. Hall, Geert-Jan De Klerk, 2007-10-24 For researchers and students George's books have become the standard works on in vitro plant propagation For this the third edition of the classic work authors with specialist knowledge have been brought on board to cover the hugely expanded number of topics in the subject area Scientific knowledge has expanded rapidly since the second edition and it would now be a daunting task for a single author to cover all aspects adequately However this edition still maintains the integration that was characteristic of the previous editions The first volume of the new edition highlights the scientific background of in vitro propagation The second volume covers the practice of micropropagation and describes its various applications

*Experiments in Plant Tissue Culture* John H. Dodds, Lorin W. Roberts, 1985-10-31 The second edition of *Experiments in Plant Tissue Culture* makes available new information that has resulted from recent advances in the applications of plant tissue culture techniques to agriculture and industry This comprehensive laboratory text takes the reader through a graded series of experimental protocols and also provides an introductory review of each topic Topics include a plant tissue culture laboratory aseptic techniques nutritional components of media callus induction organ formation xylem cell differentiation root cultures cell suspensions micropropagation embryogenesis isolation and fusion of protoplasts haploid cultures storage of plant genetic resources secondary metabolite production and quantification of procedures This volume offers all of the basic experimental methods for the major research areas of plant tissue culture and it will be invaluable to undergraduates and research investigators in the plant sciences

Biotechnology is an emerging field of science and as such the government of India is laying a large and exclusive impetus on it Plant tissue culture is the basic and the most important aspect of Biotechnology Therefore plant tissue culture has been introduced as a compulsory course in the Undergraduate and Postgraduate syllabi of all the Agricultural Universities ICAR institutes and other plant science related educational organizations This book has been designed to benefit the students the research scholars and the scientists for developing a level of self confidence to conduct the experiments independently and can acquire the practical skills along with the basic know how about the techniques being used Each chapter is devoted to a separate aspect of plant tissue culture and the chapters are arranged in the order of increasing technical complexity The opening chapters present a brief historical survey of the field of plant tissue culture a background in sterilization techniques The text deals with the experimental details of each and every technique The protocols have been simplified legibly to include details and notes that we hope will help the user avoid unnecessary errors and confusion All the applications of plant tissue culture have been very well discussed and the techniques associated with them described in detail This being a complete book on Plant tissue culture will solve all types of problem of the users who will not have to use other resource books for the same purpose      *Experimental Embryology of Vascular Plants* B. M. Johri, 2012-12-06 A long time ago botany used to be regarded as the *scientia amabilis* the friendly science eminently suitable for leisured amateurs Since then and particularly in this century it has grown tremendously in its importance and in its intimate contacts with various other disciplines of science some of which like plant genetics and plant physiology at one time indeed used to be included under the broad term botany In spite of the fact that such subjects have expanded into major scientific fields of their own botany the mother science continues to maintain its central place this is because it deals with plants which constitute one of the most vital life supporting systems of this planet Furthermore interacting and benefiting from advances made in other sciences it has steadily progressed in a number of areas Experimental embryology of vascular plants is one such field where spectacular advances have been made in recent years The time is therefore particularly opportune for the publication of an authoritative book on the subject It is very appropriate that the book has been planned and edited by Professor B M Johri one of India's foremost botanists whose contributions in embryology plant morphology and morphogenesis are internationally known He was closely associated over a number of years with Professor P Maheshwari the great botanist and embryologist to whom the book is dedicated      Introduction to Plant Tissue Culture M. *Phytochemicals in Plant Cell Cultures* Indra K. Vasil,2012-12-02 Cell Culture and Somatic Cell Genetics of Plants Volume 5 *Phytochemicals in Plant Cell Cultures* provides comprehensive coverage of the wide variety of laboratory procedures used in plant cell culture fundamental aspects of cell growth and nutrition and plant regeneration and variability This book consists of five main topics phenylpropanoids naphthoquinones and anthraquinones mevalonates alkaloids glucosinolates polyacetylenes and lipids and biologically active compounds This publication specifically discusses the coumarins in crown gall tumors natural occurrence of bufadienolides and accumulation of protoberberine alkaloids The flavor production in tissue cultures of allium species and callus cultures derived from carrot root explants is also reviewed This volume is valuable to experienced researchers and those newly entering the field of plant cell and tissue culture      **Embryology of Angiosperms** B. M. Johri,2012-12-06 Thirty four years have elapsed since the publication of the late Professor P Maheshwari s text *An Introduction to the Embryology of Angiosperms* a work which for many years served as an invaluable guide for students and a rich source book for research workerso Various texts dealing with sections of the braad spectrum of topics encompassed by Maheshwari in his book have appeared in the interim but a compendious modem work dealing with the whole field has been lacking This present volume splendidly meets the need and it is altogether fitting that Professor B M

lohri long an associate and close colleague of Professor Maheshwari and himself a prolific contributor to the subject should have undertaken the task of editing it When Maheshwari wrote it was still feasible for one author to handle the subject but today even someone with his fine breadth of vision and depth of understanding could not alone do it justice So the effort has to be a collaborative one and Professor lohri's achievement has been to bring together a team of authoritative collaborators assign them their responsibilities and put them to work to produce a text as integrated in its treatment as the diversity of the subject would allow The product vividly illustrates the advances that have been made in the study of angiosperm reproductive systems in the last 30 years and the book is surely destined to become the new standard for student and researcher alike

*A Handbook of Plant Tissue Culture* Philip Rodney White, 1943 The history of plant tissue culture The living materials The laboratory Nutrients How cultures are started Culture techniques Growth measurements and their interpretation Tissue culture and the study of problems in the pathology and general physiology of plants Morphogenesis

**Trees I** Y. P. S. Bajaj, 2012-12-06 Biotechnology has come to a stage where by replacing some of the age old practices of breeding it can produce novel and improved plants and animals that can better serve human beings and their purposes The techniques of cellular and subcellular engineering such as gene splicing and recombinant DNA cloning hybridomas and monoclonal antibodies production of human insulin protein engineering industrial fermentation artificial insemination cryopreservation and ovum transfer plant tissue culture and somatic hybridization nitrogen fixation phytomass production for biofuels etc have advanced greatly in the past decade due to the availability of better equipment and the consolidation of knowledge Product orientation has removed biotechnology from the area of pure academic interest to one of

utility where the final product is a spur to action Businesses have started pouring money into projects which has aided greatly in improving equipment information exchange and arousing the interest and imagination of the public The common goal of science industry and the public opens wide vistas and great hopes for biotechnology The business of biotechnology addresses itself to issues of factory farming technology transfer joint ventures international cooperation and to specific topics as well as the production of diagnostic kits Industry is particularly concerned with the pharmaceutical field and microbial biotechnology from which profitable return can accrue Commercial interests have led to better management practices and systematisation

**Applied Genetics of Leguminosae Biotechnology** Pawan K. Jaiwal, Rana P. Singh, 2013-06-29

Legumes include many very important crop plants that contribute very critical protein to the diets of both humans and animals around the world Their unique ability to fix atmospheric nitrogen in association with Rhizobia enriches soil fertility and establishes the importance of their niche in agriculture Divided into two volumes this work presents an up to date analysis of in vitro and recombinant DNA technologies for the improvement of grain forage and tree legumes Volume 10B presents the current state and future prospects of in vitro regeneration and genetic transformation expression and stability of transgenes modification of traits in almost all the important legumes for example soybean peanut pea french bean chick pea pigeon pea cowpea mung bean black gram azuki bean lentil Lathyrus lupinus Lotus spp Medicago spp Trifolium spp Winged bean Guar and tree legumes for their improvement

**Haploids in Crop Improvement I** Y. P. S. Bajaj, 2012-12-06 Haploid plants have the gametophytic number of chromosomes They are of great importance especially in studies on the induction of mutations and also for the production of homozygous plants they are needed in large numbers The conventional methods employed by plant breeders for their production are cumbersome time consuming laborious and rather inefficient Sometimes it may take years to produce a pure line However with the introduction of in vitro techniques especially anther culture for the induction of androgenesis it has become increasingly evident that these methods considerably accelerate the production of haploids for plant breeding programs During the last decade in vitro produced haploids have been incorporated into breeding programs of many agricultural crops and positive results have been obtained especially with rice wheat potato barley maize asparagus sunflower brassica tobacco etc Among these rice and wheat are the best examples in which a number of improved varieties have been released In wheat the breeding cycle can be shortened by three or four generations when the pollen haploid breeding method is used instead of conventional cross breeding The release of the wheat varieties Jinghua 1 and Florin is a typical example of what can be achieved with other crops Taking these developments into consideration the present volume Haploids in Crop Improvement I was compiled

**Cell Culture in Phytochemistry** Indra Vasil, 2012-12-02 Cell Culture and Somatic Cell Genetics of Plants Volume 4 Cell Culture in Phytochemistry reviews phytochemistry by employing plant cell cultures This book discusses the realization of industrial plant cell culture for the production of phytochemicals and molecular biological approach to understand the regulation of product synthesis The topics covered
