Plastic Optical Fibres Jean Marcou, Club des fibres optiques plastiques, 1997-01-01 **POF Sensors , Optical Fiber Sensor Technology** K. T. V. Grattan, B. T. Meggitt, 2000-09-30 This book has been designed to be an essential reference work on all aspects of Optical Fiber Sensors and the associated technology Optical Fiber Sensor Technology Fundamentals deals with the fundamentals of the subject in terms of the essential physics and mathematical background required for a fuller understanding of optical fiber systems It draws upon a group of authors from industry and academia with an international reputation for their work in the field Optical Fiber Sensor Technology Fundamentals provides the essential first step in the appreciation of the essential principles of optical fiber devices The chapters are of a fundamental nature yet topical in their use of material well illustrated and referenced and point to hundreds of key references accessible in the open literature to interested readers Commercial systems applications and patent data are included where appropriate in the chapters with particular reference to the applicability to industry of the techniques described This volume is an authoritative comprehensive and up to date reference text and will be of interest to researchers and industry professionals working in the field of optical fibers optoelectronics and measurement and sensing *Third International Conference on Plastic Optical Fibres & Applications* , 1994 26th International Conference on Plastic Optical Fibres Rogerio Nogueira, Ana Maria Rocha, 2017-09-13 26th International Conference on Plastic Optical Fibres POF 2017 September 13 to 15 2017 Aveiro Portugal *Plastic Optical Fibers and Applications* IGIC, Inc. Zamzow, Werner Daum, 2013-03-09 Optical information and data transmission has been an integral part of the economic life for many years The demand for ever increasing transmission rates a high horizon of expectations and the expansion of pan European networks led to a boom in glass fiber

technologies Using the physical properties of glass fibers for transmitting high data rates while simultaneously bridging long distances is the main objective here As a result of this development the technical and economical allocation of the so called last mile and short distance in house transmission to the subscriber s desk inside a building has gained much significance Existing copper networks whose utilization ratio is constantly improved by technical upgrading are used here today POF or Polymer Optical Fiber now provides us with another interesting new and economical transmission element for this particular field of applications While the technology has already been developed in the seventies no economical system solutions existed until late in the nineties But now that transmitter and receiver modules in the visible wave length range 400 800 nm are available at reasonable prices the situation is different The first technical and economical breakthrough was made in the automotive industry in 1998 with the D2B and with Most in the year 2000 respectively The first optical fiber systems are now successfully used in high comfort up market car models Providing fast and safe connections is one of NEXANS s main objectives

Optical Fiber Sensor Technology L.S. Grattan, B.T. Meggitt, 2013-03-09 Environmental and chemical sensors in optical fiber sensor technology The nature of the environment in which we live and work and the precarious state of many aspects of the natural environment has been a major lesson for scientists over the last few decades Public awareness of the issues involved is high and often coupled with a scepticism of the ability of the scientist and engineer to provide an adequate or even rapid solution to the preservation of the environment before further damage is done and to achieve this with a minimum of expenditure Monitoring of the various aspects of the environment whether it be external or internal to ourselves and involving chemical physical or biomedical parameters is an essential process for the well being of mankind and of the individual Legislative requirements set new standards for measurement and control all around us which must be met by the most appropriate of the technologies available commensurate with the costs involved Optical fiber sensor technology has a major part to play in this process both to complement existing technologies and to promote new solutions to difficult measurement issues The developments in new sources and detectors covering wider ranges of the electromagnetic spectrum with higher sensitivity

allow the use of techniques that some time ago would have been considered inappropriate or lacking in sufficient sensitivity
