A Beginner's Psychology Edward Bradford Titchener,2020-09-28 In this Beginner s Psychology I have tried to write as nearly as might be the kind of book that I should have found useful when I was beginning my own study of psychology That was nearly thirty years ago and I read Bain and the Mills and Spencer and Rabier and as much of Wundt as a struggling acquaintance with German would allow Curiously enough it was a paragraph in James Mill most unpsychological of psychologists that set me on the introspective track though many years had to pass before I properly understood what had put him off it A book like this would have saved me a great deal of labour and vexation of spirit Nowadays of course there are

many introductions to psychology and the beginner has a whole library of text books to choose from Still they are of varying merit and what is perhaps more important their temperamental appeal is diverse I do not find it easy to relate this new book to the older Primer which will not be further revised There is change all through every paragraph has been rewritten The greatest change is however a shift of attitude I now lay less stress than I did upon knowledge and more upon point of view The beginner in any science is oppressed and sometimes disheartened by the amount he has to learn so many men have written and so many are writing the books say such different things and the magazine articles are so upsetting Envidious is the senior who can reply when some scientific question is on the carpet There are three main views A's and B's and C's and you will find them here and there and elsewhere But as time goes by this erstwhile beginner comes to see that knowledge is after all a matter of time itself If he keeps on working knowledge is added unto him and not only knowledge but also what is just as valuable as knowledge the power of expert assimilation so that presently when some special point is in debate he is not ashamed of the plea of ignorance He has learned that one man cannot compass the full range of a science and he is assured that so many hours of expert attention will make him master of the new matter He comes in this way not surely to underestimate knowledge but to be less anxious about it and as that preoccupation goes the point of view seems to be more and more important Why is it that beginners in science are so often disjointed in their thinking so often superficial unable to correlate what they know logically all at sea There is no doubt that they are whether they study physics or chemistry biology or psychology I think the main reason is that they have never got the scientific point of view they are taught Physics or Biology but not Science Hence I have in this book written an inordinately long introduction and have kept continually harping on the difference between fact and meaning I try to make the reader see clearly what I take Science to be It does not matter whether he agrees with me that is a detail I shall be fully satisfied if he learns to be clear and definite in his objections realizes his own point of view and sticks to it in working out later his own psychological system Muddledness is the enemy and there is a good deal of muddled thinking even in modern books
