If the issue of methodology is essential for any researcher, it is perhaps even more so in African Studies. Area studies start primarily from a geographical and empirical, not a theoretical delimitation of their object of research. This makes the problem of the relevance of methods in relation to a complex and multilayered research object the first obstacle to overcome. Interdisciplinarity is, of course, the answer, but most researchers abandon this attractive approach when they move towards realism in assessing the extent of what they can reasonably handle. The individualism deeply entrenched in the academic profession makes the results of many (interdisciplinary) collective research projects often hypothetical. Researchers are faced with the usual problem of trying to marry a concern for accurate assessment of multidimensional realities with a more focused and rigid scientific approach, or the conflict between 'area studies and the discipline'¹?
