*Lees' Loss Prevention in the Process Industries* Frank Lees, 2005-01-10

Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport

Plants have become larger and are often situated in or close to densely populated areas

Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough Bhopal Chernobyl Three Mile Island the Phillips 66 incident and Piper Alpha to name but a few

The field of Loss Prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property

This book is a detailed guidebook to defending against these and many other hazards

It could without exaggeration be referred to as the bible for the process industries

This is THE standard reference work for chemical and process engineering safety professionals

For years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety

An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference

instead

Frank Lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field
