Petridis,S. K. Pichorides,N. Varopoulos,2006-11-14 In recent years there has been a tremendous growth in psychology as a
field of study and in the number of students of clinical psychology in particular The latter is partly due to the proliferation of
professional schools of psychology that are devoted to practitioner oriented degrees rather than the traditional research
oriented course of study Whatever school students emerge from however they are obliged to demonstrate proficiency in
providing clinical services This multi volume handbook is devoted to describing the core competency areas in providing
psychological services which is relevant to practitioners as well as clinical researchers As such it covers assessment and
conceptualization of cases the application of evidence based methods supervision consultation cross cultural factors and
ethics The Handbook comprises three volumes with contributions by experts in each area The goal is to provide detailed
descriptions of competence levels and describe the developmental trajectory required to reach the highest of these levels
Each chapter in Volume I will follow a similar format including an overview basic competencies and expert competencies This
will facilitate easy comparison across chapters All will be illustrated with case examples Subsequent volumes will have a
similarly structured format that will include maintenance factors mechanisms of change evidence based treatment
approaches and a focus on the transition from basic skills to expert functioning It is expected that the systematic
presentation of skills will provide a gold standard against which to measure individual performance and in this regard will be
valuable to students instructors and credentialing bodies **Pade Approximation and its Applications** L.
