Psychophysics Beyond Sensation Christian Kaernbach, Erich Schröger, Hermann Müller, Hermann Müller, Erich Schröger, 2004-05-20 This volume presents a series of studies that expand laws invariants and principles of psychophysics beyond its classical domain of sensation This book's goal is to demonstrate the extent of the domain of psychophysics ranging from sensory processes through sensory memory and short term memory issues to the interaction between sensation and action The dynamics and timing of human performance are a further important issue within this extended framework of psychophysics Given the similarity of the various cortical areas in terms of their neuroanatomical structure it is an important question whether this similarity is paralleled by a similarity of processes These issues are addressed by the contributions in the present volume using state of the art research methods in behavioral research psychophysiology and mathematical modeling The book is divided into four sections Part I presents contributions concerning the classical domain of psychophysical judgment The next two parts are concerned with elementary and higher order processes and the concluding section deals with psychophysical models The sections are introduced by guest editorials contributed by independent authors These editorials present the authors personal view on the respective section providing an integrated account of the various contributions or highlighting their focus of interest among them While also voicing their own and sometimes different point of view they contribute to the process of discussion that makes science so exciting This volume should be of great interest to advanced students in neuroscience cognitive science psychology neuropsychology and related areas who seek to evaluate the range and power of psychological work today Established scientists in those fields will also appreciate the variety of issues addressed within the same methodological framework and their multiple interconnections and stimulating cross talk

Sensation and Perception Bennett L. Schwartz, John H. Krantz, 2018-01-05 The highly accessible Sensation and Perception presents a current and accurate account of modern sensation and perception from both a cognitive and neurocognitive perspective To show students the relevance of the material to their everyday lives and future careers authors Bennett L Schwartz and John H Krantz connect concepts to real world applications such as driving cars playing sports and evaluating risk in the military Interactive Sensation Laboratory Exercises ISLE provide simulations of experiments and neurological processes to engage readers with the phenomena covered in the text and give them a deeper understanding of key concepts The Second Edition includes a revamped version of the In Depth feature from the previous edition in new Exploration sections that invite readers to learn more about exciting developments in the field Additionally new Ponder Further sections prompt students to practice their critical thinking skills with chapter topics

Principles of Receptor Physiology Werner R. Loewenstein, 2013-03-07 Why should there be a handbook of sensory physiology and if so why now The editors have asked this question marshalled all of the arguments that seemed to speak against their project and then discovered that most of these arguments really spoke in favor of it there seemed to be no doubt that the attempt should be made and that it should be made now No complete overview of sensory physiology has been attempted since Bethe s Handbuch der normalen und pathologischen Physiologie nearly forty years ago Since then the field has evolved with unforeseen rapidity Although electric probing of single peripheral nerve fibers was begun by ADRIAN and ZOTTERMAN as early as 1926 in the somatosensory system and extended to single optic nerve fibers by HARTLINE in 1932 the real upsurge of such single unit studies has only come during the last two decades Single cell electrophysiology has now been applied to all sensory modalities and on almost every conceivable phylogenetic level It has begun to clarify peripheral receptor action and is adding to our understanding of the central processing of sensory information In parallel with these developments there have been fundamental studies of the physics and chemistry of the receptors themselves these studies are leading to insights into the mechanisms of energy transduction and nerve impulse initiation

Complex Brain Functions Robert Miller, Alexey M Ivanitsky, 2000-05-30 There are many difficulties hindering western scientists from becoming acquainted

with Russian scientific literature including both political and language barriers Russian science has a long and proud tradition going back as far as Peter the Great and the founding of the Russian Academy of Science in 1725 However Russian neuroscientists from the 19th century onwards have been largely isolated from the rest of the world

Signals, Sound, and Sensation William M. Hartmann, 2004-09-14 Designed to follow an introductory text on psychoacoustics this book takes readers through the mathematics of signal processing from its beginnings in the Fourier transform to advanced topics in modulation dispersion relations minimum phase systems sampled data and nonlinear distortion While organised like an introductory engineering text on signals the examples and exercises come from research on the perception of sound A unique feature of this book is its consistent application of the Fourier transform which unifies topics as diverse as cochlear filtering and digital recording More than 250 exercises are included many of them devoted to practical research in perception while others explore surprising auditory illusions generated by special signals Periodic signals aperiodic signals and noise along with their linear and nonlinear transformations are covered in detail More advanced mathematical topics are treated in the appendices A working knowledge of elementary calculus is the only prerequisite Indispensable for researchers and advanced students in the psychology of auditory perception

Neurobiology of Sensation and Reward Jay A. Gottfried, 2011-03-28 Synthesizing coverage of sensation and reward into a comprehensive systems overview Neurobiology of Sensation and Reward presents a cutting edge and multidisciplinary approach to the interplay of sensory and reward processing in the brain While over the past 70 years these areas have drifted apart this book makes a case for reuniting sensation and reward

Bioaccessibility and Digestibility of Lipids from Food Myriam M.-L. Grundy,Peter J. Wilde,2021-01-19 The structure of a food influences the way it is transformed during processing and digestion This in turn has an impact on nutrient bioaccessibility release and digestibility and subsequently on the physiological response and health of the individual who consumes that food Although evidence exists on the health benefits associated with the inclusion of certain lipid rich foods e g nuts dairy products and fish in the diet the mechanisms that explain the physiological effects and the long term benefits are not well understood Lipids in themselves have many beneficial health effects they are a source of energy and essential fatty acids they are structural components of cell membranes they are required to solubilise fat soluble compounds and they serve as precursors of hormones In addition the overall structure of the food containing the lipids plays a crucial role in determining health benefits notably by influencing lipid bioaccessibility and digestibility Bioaccessibility and digestibility of lipids from food uniquely focuses on the physico chemical properties of lipids and lipid rich food as well as the subsequent effects on human health Chapters from experts in food digestion examine food structure at both the macro and micro levels covering lipids from plant and animal food products The editors have developed the book for dietitians nutritionists and food scientists Clinicians and other health professionals educators in nutrition and others working in the food industry will also find the material relevant
