## **Sense And Nonsense Evolutionary Perspectives On Human Behaviour:**

**Sense and Nonsense** Kevin N. Laland, Gillian R. Brown, 2011-04-07 This book asks whether evolution can help us to understand human behaviour and explores diverse evolutionary methods and arguments. It provides a short readable introduction to the science behind the works of Dawkins, Dennett, Wilson and Pinker. It is widely used in undergraduate courses around the world.

**Sense and Nonsense** Gillian R. Brown, Kevin N. Lala, 2024-10-08 Evolutionary theory is one of the most wide ranging and inspiring scientific ideas and it offers a battery of methods that can be used to interpret human behaviour. However, researchers disagree about the best ways to use evolution to explore humanity and a number of schools of thought have emerged. *Sense and Nonsense* third edition provides an introduction to the ideas, methods and findings of five such schools: namely sociobiology, human behavioural ecology, evolutionary psychology, cultural evolution and gene culture coevolution. In this revised and updated edition of their successful monograph, Brown and Lala provide a balanced and rigorous analysis that scrutinises both the evolutionary arguments and the allegations of the critics, carefully guiding the reader through the mire of confusing terminology, claim and counter claim and polemical statements. This readable and informative introductory book will be of use to undergraduate and postgraduate students, for example in psychology, anthropology and zoology, as well as experts on one approach who would like to know more about the other perspectives and lay persons interested in evolutionary explanations of human behaviour. Having completed the book, the reader will feel better placed to assess the legitimacy of claims made about human behaviour under the name of evolution and to make judgements as to what is sense and what is nonsense.

*Sense and Nonsense* Kevin N. Laland, Gillian R. Brown, 2002-01 Evolutionary theory is one of the most wide ranging and inspiring of scientific ideas. It offers a battery of methods that can be used to help us understand human behavior. Nevertheless, the legitimacy of this exercise is at the center of a heated controversy that has raged for over a century. Many evolutionary biologists, anthropologists and psychologists have taken these evolutionary principles and tried using them to explain a wide range of human characteristics such as homicide, religion and sex differences in behavior. Others, however, are sceptical of these interpretations. Moreover, researchers disagree as to the best ways to use evolution to explore humanity and a number of schools have emerged. *Sense and Nonsense* provides an introduction to the ideas, methods and findings of five such schools: namely sociobiology, human behavioural ecology, evolutionary psychology, memetics and gene culture coevolution. Carefully guiding the reader through the mire of confusing terminology, claim and counter claim and polemical statements, Laland and Brown provide a balanced, rigorous analysis that scrutinizes both the evolutionary arguments and the allegations of the critics. This is a book that will make fascinating reading for popular science readers, undergraduate and postgraduate students, for example in psychology, anthropology and zoology, and to experts on one approach who would like to know more about the other perspectives. Having completed this book, the reader will feel better placed to assess the legitimacy of claims made about human behavior under the name of

*The Ape that Understood the Universe* Steve Stewart-Williams,2019-11-21 The Ape that Understood the Universe is the story of the strangest animal in the world the human animal It opens with a question How would an alien scientist view our species What would it make of our sex differences our sexual behavior our altruistic tendencies and our culture The book tackles these issues by drawing on two major schools of thought evolutionary psychology and cultural evolutionary theory The guiding assumption is that humans are animals and that like all animals we evolved to pass on our genes At some point however we also evolved the capacity for culture and from that moment culture began evolving in its own right This transformed us from a mere ape into an ape capable of reshaping the planet travelling to other worlds and understanding the vast universe of which we re but a tiny fleeting fragment Featuring a new foreword by Michael Shermer

Geertz, 2014-09-11 Attempts to understand the origins of humanity have raised fundamental questions about the complex relationship between cognition and culture Central to the debates on origins is the role of religion religious ritual and religious experience What came first individual religious ecstatic experiences collective observances of transition situations fear of death ritual competence magical coercion mirror neurons or temporal lobe religiosity Cognitive scientists are now providing us with important insights on phylogenetic and ontogenetic processes Together with insights from the humanities and social sciences on the origins development and maintenance of complex semiotic social and cultural systems a general picture of what is particularly human about humans could emerge Reflections on the preconditions for symbolic and linguistic competence and practice are now within our grasp Origins of Religion Cognition and Culture puts culture centre stage in the cognitive science of religion      **Thirteen Theories of Human Nature** Leslie Forster Stevenson, Leslie Stevenson, David L. of neo Darwinian natural selection it is clear that they are not legitimate extensions of neo Darwinian theory Rather they are poor metaphors and misleading analogies which add little to conventional cause and effect historiographical work This book also introduces an alternative evolutionary approach to the study of culture which does not claim that the principles of neo Darwinian evolution should be applicable outside the biological domain Radek Kundt shows that this alternative evolutionary approach nevertheless provides a deeply enriching line of enquiry that incorporates both biological evolutionary history as shaping cultural change and culture as a force acting on the gene
