Sense Respond:

Sense and Respond S. Parry, S. Barlow, M. Faulkner, 2005-05-31 The authors argue that lean production should be driven by the desire to achieve optimal customer service by sensing and responding to the customer. The customer is at the centre of the process and the organisation needs to respond in a holistic way so that the customer can impact on the design and delivery of products and processes. The book is based upon substantial research and practice by leading practitioners and heralds a paradigm shift in thinking on these issues.

Holistic Flexibility for Systems Thinking and Practice Rajneesh Chowdhury, 2024-06-14 This book explores how the conceptual lens of Holistic Flexibility presents new advancements in systems thinking. Systems thinking is often associated with frameworks and methodologies that often confine the discipline to academic circles in operations research and management science. OR MS Holistic Flexibility for Systems Thinking and Practice challenges this status quo and talks about systems thinking as a state of mind giving it a cognitive character. The book presents both theoretical deliberations and practitioner cases of Holistic Flexibility. The development of systems thinking in OR MS is described leading to the latest debates on the subject and the key pillars of Holistic Flexibility are discussed in detail. A range of case studies are presented that offer a firsthand experience of Holistic Flexibility in practice. Learnings are drawn to highlight the importance of a spiritual approach in management, an understanding which is used to further develop the conceptual lens of Holistic Flexibility since it was first introduced. This book presents a range of competencies required for systems practitioners to address and respond to complex situations in an interconnected world. A bold attempt to pragmatize systems thinking and systems practice, the ideas presented in this book weave a thread between the development of the discipline, current debates and what lies ahead. It will be highly beneficial for OR MS researchers and graduate students who are interested in systems thinking as well as researchers interested in connecting modern management thinking and Eastern mysticism.

Perspectives on Military Intelligence from the First World War to Mali Floribert Baudet, Eleni Braat, Geoffrey van Woensel, Aad Wever, 2017-07-01 With a foreword by Michael Kowalski Chairman of the Netherlands Intelligence Studies Association Many intelligence practitioners feel that the statutory footing on which intelligence agencies have been placed forms an impediment to confronting unprecedented contemporary challenges On the basis of case studies spanning the period from the First World War to the present this book argues that while the intelligence community in the era of globalization has indeed come to face new and complex challenges that require adaptation operating in demanding and changing environments is not new at all This book questions the conventional wisdom of 9 11 or the end of the Cold War as caesurae It also argues that the ability to adapt innovate question and learn from past experience is crucial for the success of intelligence organizations rather than ever expanding funding Agencies ability to reflect adapt and learn from experience determines their subsequent capability to deliver One key development

resulting from globalization is the marked increase in cooperation between intelligence agencies of different countries on the one hand and between investigative agencies and intelligence agencies on the other. This has led to concerns over human rights and privacy and to increased calls for accountability and improved oversight as the increase in cooperation between organizations operating globally also provides scope for the circumvention of domestic restrictions. This book proposes an instrument to assess the effectiveness of existing accountability arrangements and offers new insights into the role of military intelligence in a number of crises e.g. the 1962 Cold War confrontation over Western New Guinea and the functioning of intelligence in peacekeeping operations ranging from Srebrenica to Mali. Thematically comprehensive it offers a mixture of historical, legal, operational and policy aspects analyzed through the lens of institutional learning, bringing together academic and practitioners' perspectives. The focus lies not only on the familiar Anglo-Saxon experience but also on cases from India, the Netherlands, South East Asia, Bosnia, Lebanon and Mali. The book is aimed at both scholars and practitioners studying and/or working in the field of civil and military intelligence and those involved in international relations and international humanitarian law, human rights law. It brings together contributions from authors who spoke at the Conference to commemorate the 100th anniversary of the Dutch Military Intelligence and Security Service organized by the Netherlands Intelligence Studies Association (NISA) and from a number of authors who were specifically invited to participate. About the editors: Floribert Baudet is Associate Professor of Strategy at the Netherlands Defence Academy in Breda; Eleni Braat is Assistant Professor at the Department of History and Art History at Utrecht University; Jeoffrey van Woensel is a military historian who works at the Veteraneninstituut in Doorn; and Aad Wever is an independent scholar who formerly worked at Saxion University of Applied Sciences in Enschede and Ferris State University, MI, USA and who is now retired. Specific to this book: Offers a mixture of historical, legal, operational and policy aspects analyzed through the lens of institutional learning. Brings together academic and practitioners' perspectives. Focusses not only on the familiar Anglo-Saxon experience but also presents cases from India, the Netherlands, South East Asia, Bosnia, Lebanon and Mali.

Smart Materials for Science and Engineering Upendra Kumar, Piyush Kumar Sonkar, 2024-06-05 SMART MATERIALS FOR SCIENCE AND ENGINEERING Smart materials also known as advanced or creative materials are described as advanced materials that react intuitively to environmental changes or as materials that can return to their original shape in response to certain stimuli Smart materials are classified as either active or passive based on their characteristics There are two types of active materials The first kind cannot change its characteristics when subjected to outside stimuli for example photochromatic spectacles that only alter their color when exposed to sunlight The other which includes piezoelectric materials can change one sort of energy thermal electrical chemical mechanical or optical into another When subjected to external pressure it can generate an electric charge As an example optical fibers can transmit electromagnetic waves In contrast passive smart materials can transmit a specific sort of energy They have some amazing qualities that set them apart from other materials such as transiency meaning they can react to different kinds of external stimuli immediately self actuation or the capacity to change their appearance and shape selectivity where the response is divided and expected directness when the response is limited to the activating event shape changing where the material can change its shape to external stimuli their ability to determine their own health also known as self diagnosis and their ability to self heal The ability to synthesize novel materials has substantially progressed thanks to science and technology over the past 20 years They fall mostly into the following four categories polymers ceramics metals and smart materials Among these smart materials are gaining popularity since they have more uses than conventional materials Smart materials are unusual

substances that have the ability to alter their properties such as those that can immediately change their phase when placed near a magnet or their shape simply by applying heat Humanity will be significantly impacted by this new era of smart materials For instance some of them can adapt their properties to the environment some have sensory capabilities some can repair themselves automatically and some can degrade themselves These extraordinary properties of smart materials will have an effect on all facets of civilization There are many different types of intelligent materials including magnetorheological materials electro rheostat materials shape memory alloys piezoelectric materials and more This book describes many forms of smart materials and their possible uses in various fields A literature survey discusses the different types of smart materials such as based ceramics polymers and organic compounds and their needs advantages disadvantages and applications will be comprehensively discussed A discussion of well established smart materials including piezoelectric magnetostrictive shape memory alloy electro rheological fluid and magnetorheological fluid materials will be discussed with their present prospects
