　　Sequential Analysis and Optimal Design Herman Chernoff,1972-01-01 An exploration of the interrelated fields of design of experiments and sequential analysis with emphasis on the nature of theoretical statistics and how this relates to the philosophy and practice of statistics　*Sequential Analysis and Optimal Design* Herman Chernoff,1972-01-31 An exploration of the interrelated fields of design of experiments and sequential analysis with emphasis on the nature of theoretical statistics and how this relates to the philosophy and practice of statistics　**Ten Lectures on the Probabilistic Method** Joel Spencer,1994-01-01 This update of the 1987 title of the same name is an examination of what is currently known about the probabilistic method written by one of its principal developers Based on the notes from Spencer s 1986 series of ten lectures this new edition contains an additional lecture The Janson Inequalities These inequalities allow accurate approximation of extremely small probabilities A new algorithmic approach to the Lovasz Local Lemma attributed to Jozsef Beck has been added to Lecture 8 as well　**Lectures on the Logic of Computer Programming** Zohar Manna,1980-01-01 This monograph deals with aspects of the computer programming process that involve techniques derived from mathematical logic The author focuses on proving that a given program produces the intended result whenever it halts that a given program will eventually halt that a given program is partially correct and terminates and that a system of rewriting rules always halts Also the author describes the intermediate behavior of a given program and discusses constructing a program to meet a given specification　**Adaptive Methods for Partial Differential Equations** Ivo Babushka,Jagdish Chandra,Joseph E. Flaherty,1989-01-01 Proceedings of the Workshop on Adaptive Computational Methods for Partial Differential Equations Rensselaer Polytechnic Institute October 13 15 1988 T p verso　**Multilevel Projection Methods for Partial Differential Equations** Stephen F. McCormick,1992-01-01 Mathematics of Computing Numerical Analysis　**Foundations of Stochastic Differential Equations in Infinite Dimensional Spaces** Kiyosi Ito,1984-11-01 A systematic self contained treatment of the theory of stochastic differential equations in infinite dimensional spaces Included is a discussion of Schwartz spaces of distributions in relation to probability theory and infinite dimensional stochastic analysis as well as the random variables and stochastic processes that take values in infinite dimensional spaces

　　Advances in Stochastic Simulation Methods N. Balakrishnan,V.B. Melas,S. Ermakov,2012-12-06 This is a volume consisting of selected papers that were presented at the 3rd St Petersburg Workshop on Simulation held at St Petersburg Russia during June 28 July 3 1998 The Workshop is a regular international event devoted to mathematical problems of simulation and applied statistics organized by the Department of Stochastic Simulation at St Petersburg State University in cooperation with INFORMS College on Simulation USA Its main purpose is to exchange ideas between researchers from Russia and from the West as well as from other coun tries throughout the World The 1st Workshop was held during May 24 28 1994 and the 2nd workshop was held during June 18 21 1996 The selected proceedings of the 2nd Workshop was

published as a special issue of the Journal of Statistical Planning and Inference Russian mathematical tradition has been formed by such genius as Tchebysh eff Markov and Kolmogorov whose ideas have formed the basis for contempo rary probabilistic models However for many decades now Russian scholars have been isolated from their colleagues in the West and as a result their mathe matical contributions have not been widely known One of the primary reasons for these workshops is to bring the contributions of Russian scholars into lime light and we sincerely hope that this volume helps in this specific purpose **Weak Convergence of Measures** Patrick Billingsley,1971-01-01 A treatment of the convergence of probability measures from the foundations to applications in limit theory for dependent random variables Mapping theorems are proved via Skorokhod s representation theorem Prokhorov s theorem is proved by construction of a content The limit theorems at the conclusion are proved under a new set of conditions that apply fairly broadly but at the same time make possible relatively simple proofs **Theory and Applications of Sequential Nonparametrics** Pranab Kumar Sen,1985-01-31 A study of sequential nonparametric methods emphasizing the unified Martingale approach to the theory with a detailed explanation of major applications including problems arising in clinical trials life testing experimentation survival analysis classical sequential analysis and other areas of applied statistics and biostatistics **Solitons in Mathematics and Physics** Alan C. Newell,1985-06-01 A discussion of the soliton focusing on the properties that make it physically ubiquitous and the soliton equation mathematically miraculous **Lectures on Mathematical Combustion** John D. Buckmaster,Geoffrey S. S. Ludford,1983-12-01 An introduction to far reaching developments in theoretical combustion with special emphasis on flame stability a topic that has to date benefited most from the application of modern asymptotic methods The authors provide a modern view of flame theory and a complete description of the longstanding ignition and explosion problems including the solutions that were made available independently by Kapila and Kassoy through activation energy asymptotics the main theme of this monograph *A Matrix Algebra Approach to Artificial Intelligence* Xian-Da Zhang,2020-05-23 Matrix algebra plays an important role in many core artificial intelligence AI areas including machine learning neural networks support vector machines SVMs and evolutionary computation This book offers a comprehensive and in depth discussion of matrix algebra theory and methods for these four core areas of AI while also approaching AI from a theoretical matrix algebra perspective The book consists of two parts the first discusses the fundamentals of matrix algebra in detail while the second focuses on the applications of matrix algebra approaches in AI Highlighting matrix algebra in graph based learning and embedding network embedding convolutional neural networks and Pareto optimization theory and discussing recent topics and advances the book offers a valuable resource for scientists engineers and graduate students in various disciplines including but not limited to computer science mathematics and engineering **Nonlinear Renewal Theory in Sequential Analysis** Michael Woodroofe,1982-01-01 The global approach to nonlinear renewal theory is integrated with the author s own local approach Both the theory and its applications are

placed in perspective by including a discussion of the linear renewal theorem and its applications to the sequential probability ratio test Applications to repeated significance tests to tests with power one and to sequential estimation are also included The monograph is self contained for readers with a working knowledge of measure theoretic probability and intermediate statistical theory   Mathematics Motivated by the Social and Behavioral Sciences Donald G. Saari,2018-02-06 The mathematical challenges coming from the social and behavioral sciences differ significantly from typical applied mathematical concerns Change for instance is ubiquitous but without knowing the fundamental driving force standard differential and iterative methods are not appropriate Although differing forms of aggregation are widely used a general mathematical assessment of potential pitfalls is missing These realities provide opportunities to create new mathematical approaches These themes are described in an introductory expository and accessible manner by exploring new ways to handle dynamics and evolutionary game theory to identify subtleties of decision and voting methods to recognize unexpected modeling concerns and to introduce new approaches with which to examine game theory Applications range from avoiding undesired consequences when designing policy to identifying unanticipated voting where the wrong person could win nonparametric statistical and economic supply and demand properties   *Stochastic Processes in the Neurosciences* Henry C. Tuckwell,1989-01-01 This monograph is centered on quantitative analysis of nerve cell behavior The work is foundational with many higher order problems still remaining especially in connection with neural networks Thoroughly addressed topics include stochastic problems in neurobiology and the treatment of the theory of related Markov processes   *Fundamentals of Radar Imaging* Margaret Cheney,Brett Borden,2009-01-01   **A Unified Approach to Boundary Value Problems** Athanassios S. Fokas,2008-01-01 This text presents a new approach to analysing initial boundary value problems for integrable partial differential equations   **Navier-Stokes Equations and Nonlinear Functional Analysis** Roger Temam,1995-01-01 This second edition attempts to arrive as simply as possible at some central problems in the Navier Stokes equations   **Mathematics of Genetic Diversity** J. F. C. Kingman,1980-01-01 This book draws together some mathematical ideas that are useful in population genetics concentrating on a few aspects which are both biologically relevant and mathematically interesting
