Service And Device Discovery:

Service and Device Discovery Golden G. Richard, 2002 When you turn on your cell phone the first thing you see is the message looking for service During the delay to follow your phone is busy locating the network and negotiating admission to it This is called programming service discovery interfaces it is not easy but it is a prerequisite for all telecom services This title teaches developers how to do it right It explains and compares competing platforms Bluetooth Jini Salutation SLP and UPnP Device-to-Device based Proximity Service Yufeng Wang, Athanasios V. Vasilakos, Qun Jin, Hongbo Zhu, 2017-07-12

D2D based proximity service is a very hot topic with great commercial potential from an application standpoint Unlike existing books which focus on D2D communications technologies this book fills a gap by summarizing and analyzing the latest applications and research results in academic industrial fields and standardization The authors present the architecture fundamental issues and applications in a D2D networking environment from both application and interdisciplinary points of view

Communicating Process Architectures 2009, 2009 This book is a collection of the papers presented at the 32nd Communicating Process Architecture conference CPA held at the Technical University Eindhoven the Netherlands from the 1st to the 4th of November 2009 Concurrency is a fundamental mechanism of the universe existing in all structures and at all levels of granularity To be useful in this universe any computer system has to model and reflect an appropriate level of abstraction For simplicity therefore the system needs to be concurrent so that this modeling is obvious and correct Today the commercial reality of multicore processors means that concurrency issues can no longer be ducked if applications are going to be able to exploit more than an ever diminishing fraction of their power This is a second but very forceful reason to take this subject seriously We need theory and programming technology that turns this around and makes concurrency an elementary part of the everyday toolkit of every software engineer This is what these proceedings are all about Subjects covered in this volume include system design and implementation for both hardware and software tools for concurrent programming languages libraries and run time kernels and formal methods and applications
