Ecological Data William K. Michener,James W. Brunt,2009-04-01 Ecologists are increasingly tackling difficult issues like global change loss of biodiversity and sustainability of ecosystem services These and related topics are enormously challenging requiring unprecedented multidisciplinary collaboration and rapid synthesis of large amounts of diverse data into information and ultimately knowledge New sensors computers data collection and storage devices and analytical and statistical methods provide a powerful tool kit to support analyses graphics and visualizations that were unthinkable even a few years ago New and increased emphasis on accessibility management processing and sharing of high quality well maintained and understandable data represents a significant change in how scientists view and treat data These issues are complex and despite their importance are typically not addressed in database ecological and statistical textbooks This book addresses these issues providing a much needed resource for those involved in designing and implementing ecological research as well as students who are entering the environmental sciences Chapters focus on the design of ecological studies data management principles scientific databases data quality assurance data documentation archiving ecological data and information and processing data into information and knowledge The book stops short of a detailed treatment of data analysis but does provide pointers to the relevant literature in graphics statistics and knowledge discovery The central thesis of the book is that high quality data management systems are critical for addressing future environmental challenges This requires a new approach to how we conduct ecological research that views data as a resource and promotes stewardship recycling and sharing of data Ecological Data will be particularly useful to those ecologists and information specialists that actively design manage and analyze environmental databases However it will also benefit a wider audience of scientists and students in the ecological and environmental sciences **North American Science Symposium** ,1999

Pattern Discovery in Biomolecular Data Jason T. L. Wang,Bruce A. Shapiro,Dennis Shasha,1999-10-28 Finding patterns in biomolecular data particularly in DNA and RNA is at the center of modern biological research These data are complex and growing rapidly so the search for patterns requires increasingly sophisticated computer methods Pattern Discovery in Biomolecular Data provides a clear up to date summary of the principal techniques Each chapter is self contained and the techniques are drawn from many fields including graph theory information theory statistics genetic algorithms computer visualization and vision Since pattern searches often benefit from multiple approaches the book

presents methods in their purest form so that readers can best choose the method or combination that fits their needs The chapters focus on finding patterns in DNA RNA and protein sequences finding patterns in 2D and 3D structures and choosing system components This volume will be invaluable for all workers in genomics and genetic analysis and others whose research requires biocomputing

Advances in Databases and Information Systems Witold Litwin,Tadeusz Morzy,Gottfried Vossen,1998 This book constitutes the refereed proceedings of the Second East European Symposium on Advances in Databases and Information systems ADBIS 98 held in Poznan Poland in September 1998 The 25 revised full papers presented were selected from a total of 90 submissions and six extended abstracts within a special section East meets West The papers are organized in topical sections on query languages optimization collaborative systems schema integration storage and version management object systems knowledge discovery and the Web and systems design

Next Generation Information Technologies and Systems Ron Y. Pinter,Shalom Tsur,2003-07-31 The Next Generation Information Technologies and Systems NGITS workshop series is a biannual event held in Israel since 1993 Like its predecessors NGITS 99 brings together active members of the international research community interested in information technology and knowledge based systems Many of the base technologies in the traditional areas of database management systems information retrieval and resource optimization are being deployed nowadays in novel systems and applications that flourish with the astonishing increase in computational power storage capacity communication and of course the advent of the world wide web These new fronts in turn present an ever growing set of challenges to the technologies such as data availability information integrity and knowledge extraction fuelling an exciting set of activities Our workshop clearly reflects this trend offering a rich sample of the state of the art at the close of the millennium and a glimpse of what is to come in the next one In response to the call for papers we received 34 high quality submissions 22 of which were carefully selected by the Program Committee for presentation at the workshop and inclusion in these proceedings These include 17 full length papers as well as 5 short papers that will be accompanied by demonstrations during the workshop In addition it is our pleasure to feature two invited talks given by Professor J Ullman of Stanford University and IBM Fellow C Mohan

Database Annotation in Molecular Biology Arthur M. Lesk,2005-09-01 Two factors dominate current molecular biology the amount of raw data is increasing very rapidly and successful applications in biomedical research require carefully curated and annotated databases The quality of the experimental data especially nucleic acid sequences is satisfactory however annotations depend on features inferred from the data rather than measured directly for instance the identification of genes in genome sequences It is essential that these inferences are as accurate as possible and this requires human intervention With the recognition of the importance of accurate database annotation and the requirement for individuals with particular constellations of skills to carry it out annotators are emerging as specialists within the profession of bioinformatics This book compiles information about annotation its current status what is required to improve it what skills must be brought

to bear on database curation and hence what is the proper training for annotators The book should be essential reading for all people working on biological databases both biologists and computer scientists It will also be of interest to all users of such databases including molecular biologists geneticists protein chemists clinicians and drug developers **The**
