The International Politics of Whaling Peter J. Stoett, 2011-11-01 Whales large mysterious intelligent and endangered In 1986 a global moratorium on whaling was issued by the International Whaling Commission However that decision was not without controversy Some countries such as Norway continue to whale in defiance of the ban In this fascinating book Peter Stoett combines ecological sensitivity with a hard assessment of the political realities of the international regime to examine this important issue The International Politics of Whaling examines contemporary whaling issues with an emphasis on three factors our knowledge of whales and current whale populations and the impact of whaling the actors and institutions involved in the debate over whaling and the ethical dimension Reluctantly he concludes that the current global moratorium on whaling is problematic and that we must focus instead on habitat preservation in order to protect whales more effectively *International Relations Theory and Ecological Thought* Eric Laferrière, Peter J.

Stoett, 2003-09-02 Ecological crises have never been higher on the international political agenda However ecological thought and international relations theory have developed as separate disciplines This ground breaking study looks at the relationship between ecological thought and international relations theory arguing that there are shared concerns peace co operation and security The authors ask what ecological crisis can teach IR theorists as well as what ecological perspectives have been adopted by governments and international NGOs **Canadian Books in Print. Author and Title Index**, 1975

Systems Science and Cybernetics - Volume I Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a

planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

Symbols, Myths and Images of the French Revolution James A. Leith, University of Regina. Canadian Plains Research Center, University of Regina. Department of History, 1998 From 18 26 September 1996 the

Department of History of the University of Regina hosted a colloquium entitled Symbols Myths and Images of the French Revolution in honour of James A Leith Queen s University a leading historian of revolutionary France for over three decades who began his teaching career in Saskatchewan The colloquium brought together an international panel of scholars to discuss the visual imagery propaganda and cultural dimensions of the French Revolution a subject which since Professor Leith began his career has come to occupy an ever larger place in revolutionary historiography An Analysis of the Extraterrestrial Life Detection Problem Richard Stuart Young,Robert B. Painter,Richard D. Johnson,1965 Arcturians: How to Heal, Ascend, and Help Planet Earth David K. Miller,2013-04-01 On the Mayan Calendar every day of the year represents the energy of one of the twenty solar glyphs and one of the thirteen numbers called tones The solar glyph indicates your soul purpose and the tone is the energy you will use to attain this purpose The Planet Earth D. R. Bates,2016-10-13 The Planet Earth Second Edition reviews remarkable advances in understanding the physical aspects of the Earth including technical developments that have made various new types of observation and measurement possible as well as a deepened understanding of the fundamental laws of nature that have given the necessary basis for the interpretation of many of the complex phenomena concerned Topics covered include the Van Allen radiation belts the Mohole project continental drift and polar wandering the theory of magnetic storms and aurorae and the possibility of extra terrestrial sources of life This book is comprised of 18 chapters and begins with an overview of the work and achievements of the International Geophysical Year The reader is then introduced to the Earth s physical properties such as the deep interior crust oceans climate and geomagnetic field as well as its origin age and possible ultimate fate Subsequent chapters explore the composition and structure of the Earth s atmosphere the general circulation of the atmosphere and oceans the ice ages meteorology and weather forecasting and experimental proof of the existence of the ionosphere The airglow aurorae and magnetic storms meteors cosmic radiation and radiation belts are also described The final chapter examines the genesis of life on Earth This monograph is intended for students and practitioners of planetary and geophysical sciences Environmental Hazards and Human Health Richard B. Philp,1995-04-13 The need for government regulation of the use and disposal of toxic chemicals and the nature of the risk associated with them is certain to increase over the next few years Information concerning the hazards of new chemicals will also emerge The high cost of completely eliminating some synthetic chemicals from the environment makes it essential to have an appreciation of their real relative risks against the background of natural hazards encountered daily This text is the only one currently available that addresses these questions and provides a knowledge base of the principles of toxicology pharmacokinetics and pharmacodynamics toxicity testing and so on describes mechanistically the major natural and anthropogenic toxicants in the environment and applies this knowledge to an understanding of the nature and extent of risks that are posed to society at large as well as to the work force This text differs from similar ones by placing xenobiotics of human origin in perspective to naturally occurring ones Examples of industrial accidents are used

liberally and 24 case studies of toxic reactions taken from real occurrences are included Review questions provide an opportunity for self evaluation A Core Bibliography on Global Issues Related to Environment, Resources, Population, and Sustainable Development ,1991 **Introduction to Environmental Remote Sensing** Eric C. Barrett,Leonard F. Curtis,2013-05-13 Taking a detailed non mathematical approach to the principles on which remote sensing is based this book progresses from the physical principles to the application of remote sensing **Mathematics of Planet Earth** Hans Kaper,Christiane Rousseau,2015-03-31 Our planet faces many challenges In 2013 an international partnership of more than 140 scientific societies research institutes and organizations focused its attention on these challenges This project was called Mathematics of Planet Earth and featured English and French language blogs accessible to nonmathematicians as part of its outreach activities This book is based on more than 100 of the 270 English language blog posts and focuses on four major themes A Planet to Discover A Planet Supporting Life A Planet Organized by Humans and A Planet at Risk Readers will learn about the challenges that confront the Earth today and how mathematics and mathematicians contribute to a better understanding of some of these challenges *Canadian Books in Print 2002* Edited by Butler Marian,Marian Butler,2002-02 Containing more than 48000 titles of which approximately 4000 have a 2001 imprint the author and title index is extensively cross referenced It offers a complete directory of Canadian publishers available listing the names and ISBN prefixes as well as the street e mail and web addresses **Orbital Debris: Technical Issues and Future Directions** ,1992 *God, Science, and Religious Diversity* Robert T. Lehe,2018-07-24 Two major obstacles to belief in God in the twenty first century are the idea that science is incompatible with religious faith and the idea that the diversity of religions undermines the credibility of belief that any one religion could be truer than the others This book addresses both of these challenges to belief in God and explores a connection between them It argues that science and religion are not only compatible but that some recent scientific discoveries actually support belief in the existence of the Creator God The diversity of religions is widely believed to undermine the credibility of religious truth claims because of the assumed lack of any way to settle disagreements between different religions This book argues that one rational way to adjudicate disagreements between the claims of diverse religions is to assess their consistency with contemporary science The book considers how Christian theism and Buddhism fare in harmonizing their metaphysical frameworks with contemporary scientific cosmology Although both theistic and Buddhist worldviews resonate with many recent scientific discoveries the Big Bang theory and cosmic fine tuning favor the Christian doctrine of creation **Proceedings of Topical Issues in International Political Geography** Radomir Bolgov,Vadim Atnashev,Yury Gladkiy,Art Leete,Alexey Tsyb,Sergey Pogodin,2020-10-03 This proceedings book addresses the main issues of contemporary political geography and international relations providing a platform for discussion and collaboration of experts in the fields of Political Geography Geopolitics International Relations and International Law Participants from all over the world consider the controversies and challenges posed by globalization focusing in particular
