Brent Garry, Jacob E. Bleacher, 2011 Where on Earth is it like Mars How were the Apollo astronauts trained to be geologists on the Moon Are volcanoes on Earth just like the ones on other planets The exploration of our solar system begins in our own backyard Discoveries on other planetary bodies cannot always be easily explained Therefore geologic sites on this planet are used to better understand the extraterrestrial worlds we explore with humans robots and satellites *Analogs for Planetary Exploration* is a compilation of historical accounts of astronaut geology training overviews of planetary geology research on Mars educational field trips to analog sites plus concepts for future human missions to the Moon This Special Paper provides a great overview of the science training and planning related to planetary exploration for students educators researchers and geology enthusiasts After all as we learn about the solar system we can better understand our own planet Earth **Spaceborne Antennas for Planetary Exploration** William A. Imbriale, 2006-08-08 JPL spacecraft antennas from the first Explorer satellite in 1958 to current R D *Spaceborne Antennas for Planetary Exploration* covers the development of Jet Propulsion Laboratory JPL spacecraft antennas beginning with the first Explorer satellite in 1958 through current research and development activities aimed at future missions Readers follow the evolution of all the new designs and technological innovations that were developed to meet the growing demands of deep space exploration The book focuses on the radio frequency design and performance of antennas but covers environmental and mechanical considerations as well There is additionally a thorough treatment of all the analytical and measurement

techniques used in design and performance assessment Each chapter is written by one or more leading experts in the field of antenna technology The presentation of the history and technology of spaceborne antennas is aided by several features Photographs and drawings of JPL spacecraft Illustrations to help readers visualize concepts and designs Tables highlighting and comparing the performance of the antennas Bibliographies at the end of each chapter leading to a variety of primary and secondary source material This book complements Large Antennas of the Deep Space Network Wiley 2002 which surveys the ground antennas covered in support of spacecraft Together these two books completely cover all JPL antenna technology in keeping with the JPL Deep Space Communications and Navigation Series mission to capture and present the many innovations in deep space telecommunications over the past decades This book is a fascinating and informative read for all individuals working in or interested in deep space telecommunications **Exploring the Solar System R.**

Launius,2012-12-28 Beginning in the early days of the Space Age well before the advent of manned spaceflight the United States followed soon by other nations undertook an ambitious effort to study the planets of the solar system The remarkable fruits of this research revolutionized the public s view of their celestial neighbors capturing the imaginations of people from all backgrounds like nothing else save the Apollo lunar missions From the first space probes to the most recent planetary rovers they have continually delivered impressive discoveries and reshaped our understanding of the cosmos Offering fascinating investigations into this crucial chapter in space history this collection of specially commissioned essays from leading historians opens new vistas in our understanding of the development of planetary science **Solar and Space Physics and Its Role in Space Exploration** National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on the Assessment of the Role of Solar and Space Physics in NASA's Space Exploration Initiative,2004-10-11 In February 2004 the President announced a new goal for NASA to use humans and robots together to explore the Moon Mars and beyond In response to this initiative NASA has adopted new exploration goals that depend in part on solar physics research These actions raised questions about how the research agenda recommended by the NRC in its 2002 report The Sun to the Earth and Beyond which did not reflect the new exploration goals would be affected As a result NASA requested the NRC to review the role solar and space physics should play in support of the new goals This report presents the results of that review It considers solar and space physics both as aspects of scientific exploration and in support of enabling future exploration of the solar system The report provides a series of recommendations about NASA s Sun Earth Connections program to enable it to meet both of those goals Life and Physical Sciences Research for a New Era of Space Exploration National Research Council,Division on Engineering and Physical Sciences,Aeronautics and Space Engineering Board,Space Studies Board,Committee for the Decadal Survey on Biological and Physical Sciences in Space,2010-08-23 In response to requests from Congress NASA asked the National Research Council to undertake a decadal survey of life and physical sciences in microgravity Developed in consultation with members of the life and physical sciences

communities the guiding principle for the study is to set an agenda for research for the next decade that will allow the use of the space environment to solve complex problems in life and physical sciences so as to deliver both new knowledge and practical benefits for humankind as we become a spacefaring people The project s statement of task calls for delivery of two books an interim report and a final survey report Although the development of specific recommendations is deferred until the final book this interim report does attempt to identify programmatic needs and issues to guide near term decisions that are critical to strengthening the organization and management of life and physical sciences research at NASA
