Casebook of the Brief Psychotherapies Richard A. Wells, Vincent J. Giannetti, 2013-11-11 Following the publication of the Handbook of the Brief Psychotherapies Wells Giannetti 1990 the editors began to conceptualize the idea of a collection of case studies encompassing a number of the commonly encountered clinical problems that have been treated with such approaches The Casebook of the Brief Psychotherapies is the result The Case book details clinical interventions with client populations as diverse as substance abusers torture victims the physically handicapped and other exceptional groups and the economically

disadvantaged with emotional and behavioral problems as well as individuals experiencing sexual dysfunction or eating disorders. In addition, topics such as bereavement, depression, anger, and many crucial aspects of marital and family therapy are discussed by eminent clinical practitioners. Although the cases draw heavily upon cognitive behavioral and strategic structural formulations, psychodynamic, interpersonal, and experiential approaches are also included. The Casebook is clinically oriented with a minimum of theory. Ample case material and commentary allow the reader to experience directly the application of brief therapy to specific client problems. What emerges from this compendium of approaches and problems is a tapestry of action-oriented problem-solving skill-building, rational approaches to therapy that balance the client's ability to change with the demands and limits of time.

Breakthroughs in Six Brief Psychotherapies George Carpetto, 2000. There are many books that depict the psychological world, its richness of theories and counseling models. Yet there are few books that integrate under one cover clusters of counseling models that rightfully need to be treated and considered together because of their inherent commonalities. Treated in this cluster-like fashion, breakthroughs in psychological counseling may be better observed and thus better understood. With an enhanced appreciation from this broader and higher level of knowledge, the counselor can become better equipped, more flexible, and hopefully more effective with clients. Thus the counselor avoids being wedded to any one particular model, as Carl Whitaker had correctly cautioned against many years ago. This book deals with the treatment of six psychotherapeutic models which, despite their differences and unique characteristics, are interwoven into a huge quilt identifiable as modern brief therapy under the rubric of family systems. This book effects a synthesis so that the following models are appreciated for their unique breakthroughs and special connectedness with each other: The models treated relate to the Mental Research Institute problem-focused, the Milan School circular questioning, Steve de Shazer solution-focused, O'Hanlon/Weiner/Davis solution-oriented, Terri Real constructivist, and White/Epston narrative techniques.

Empathic Brief Psychotherapy Barbara B. Seruya, 1997. Dr. Seruya orients mental health professionals to brief therapy in general and to relevant elements of self psychology in particular, identifying new metaphors to form a conceptual bridge from traditional theories and strategies to a patient-centered experience encouraging focus on symptoms and rapid behavioral change.

Case Book of Brief Psychotherapy with College Students Leighton Whitaker, Stewart Cooper, James Archer Jr., 2014-02-25. Short-term therapy doesn't have to be second best. This valuable book explores a variety of brief therapy approaches with young adults between 17 and 25. Each case discussion thoroughly covers the salient points of the client, the problem, and the treatment, as well as segments of the treatment transcripts that illustrate the critical aspects of the counseling. A post hoc question and answer section explores alternative ways the therapist could have handled the client and allows in-depth examination of successful treatment approaches. Case Book of Brief Psychotherapy with College Students offers constructive suggestions for dealing with common presenting problems, including depression, individuation issues, PTSD, impulse control in mandated psychotherapy, cult membership, post-rape trauma.

Charman,2003-10-03 Many students enter graduate programs with little or no experience of psychodynamic psychotherapy Efforts to impart clinical skills have often been less than systematic and beginning psychotherapists have not always been encouraged to think about what they are doing and why they are doing it from a scientific standpoint Thoughtfully building on current debates over efficacy and effectiveness this book outlines a promising approach to training in which the work of therapy is divided into tasks patterned after Luborsky s influential delineation of curative factors significant developments in the course of the therapy that are crucial for effective change Each task step for the therapist cognitive behavioral affective or a combination is analyzed taught separately and then put in sequence with the other task steps Curative factors have been extensively studied in recent years and the approach rests on a solid empirical base In a climate of increased accountability clinicians must demonstrate that they are responding to providers requests to conduct evidence based practices Core Processes in Brief Psychodynamic Psychotherapy will be an invaluable resource not only for students and trainees but for established therapists who find themselves asked to justify their work **Therapeutic Communication** Herschel Knapp,2007-02-13
