Planning and the Rural Environment Joan Davidson, Gerald Wibberley, 2016-04-20

Planning and the Rural Environment examines the environmental issues affecting countryside planning. Emphasis is placed on the look and feel of the open countryside, the function and appearance of the rural environment rather than the problems of its people and the settlements in which they live. Also discussed is the conflict of interest generated between some of the major planning systems concerned with the development of rural activities and the protection of rural resources. Comprised of 13 chapters, this volume begins with an assessment of conflicting views of how a countryside of the future should develop and the degree of control and direction that should take place. The following chapters consider how the emerging range of environmental problems and opportunities in rural planning can best be illustrated. In particular, the dominance of agriculture as a rural activity is analyzed together with forest and woodland management, leisure activity in the countryside and conservation of resources and wildlife. The next section is devoted to uplands and the urban fringe, paying particular attention to some of the ways in which rural interests interact in two very different areas. Finally, the development of rural planning is reviewed and issues that are expected to shape the countryside of the future are considered. This book should be of interest to postgraduate students of rural planning and specialists in various fields of countryside planning. [The Routledge Companion to Rural Planning](#) Mark Scott, Nick Gallent, Menelaos Gkartzios, 2019-01-15

The Routledge Companion to Rural Planning provides a critical account and state of the art review of rural planning in the early years of the twenty first century. Looking across different international experiences from Europe, North America and Australasia to the transition and emerging economies including BRIC and former communist states, it aims to develop new conceptual propositions and theoretical insights supported by detailed case studies and reviews of available data. The Companion gives coverage to emerging topics in the field and seeks to position rural planning in the broader context of global challenges: climate change, the loss of biodiversity, food and energy security and low carbon futures. It also looks at old established questions in new ways at social and spatial justice, place shaping, economic development and environmental and landscape management. Planning in the twenty first century must grapple not only with the challenges presented by cities and urban concentration but also grasp the opportunities and understand the risks arising from rural change and restructuring. Rural areas are diverse and dynamic. This Companion attempts to capture and analyse at least some of this diversity, fostering a dialogue on likely and possible rural futures between a global community of rural planning researchers. Primarily intended for scholars and graduate students across a range of disciplines such as planning, rural geography, rural sociology, agricultural studies, development studies, environmental studies and countryside management, this book will prove to be an invaluable and up to date resource.
