Balick, Paul Alan Cox, 2020-08-19 Is it possible that plants have shaped the very trajectory of human cultures Using riveting stories of fieldwork in remote villages two of the world's leading ethnobotanists argue that our past and our future are deeply intertwined with plants Creating massive sea craft from plants indigenous shipwrights spurred the navigation of the world's oceans Today indigenous agricultural innovations continue to feed clothe and heal the world's population One out of four prescription drugs for example were discovered from plants used by traditional healers Objects as common as baskets for winnowing or wooden boxes to store feathers were ornamented with traditional designs demonstrating the human ability to understand our environment and to perceive the cosmos Throughout the world the human body has been used as the ultimate canvas for plant based adornment as well as indelible design using tattoo inks Plants also garnered religious significance both as offerings to the gods and as a doorway into the other world Indigenous claims that plants themselves are sacred is leading to a startling reformulation of conservation The authors argue that conservation goals can best be achieved by learning from rather than opposing indigenous peoples and their beliefs **KEY FEATURES** An engrossing narrative that invites the reader to personally engage with the relationship between plants people and culture Full color illustrations throughout including many original photographs captured by the authors during fieldwork New to this edition Plants That Harm a chapter that examines the dangers of poisonous plants and the promise that their study holds for novel treatments for some of our most serious diseases including Alzheimer's and substance addiction Additional readings at the end of each chapter to encourage further exploration Boxed features on selected topics that offer further insight Provocative questions to facilitate group discussion Designed for the college classroom as well as for lay readers this update of Plants People and Culture entices the reader with firsthand stories of fieldwork spectacular illustrations and a deep respect for both indigenous peoples and the earth's natural heritage Plants and People Alexandre Chevalier, Elena Marinova, Leonor Pena-Chocarro, 2014-04-30 This first monograph in the EARTH The Dynamics of Non Industrial Agriculture 8 000 years of Resilience and Innovation series approaches the great variety of agricultural practices in human terms It focuses on the relationship between plants and people the complexity of agricultural processes and their organisation within particular communities and societies Collaborative European research among archaeologists archaeobotanists ethnographers historians and agronomists using a broad analytical scale of investigation seeks to establish new common ground for integrating different approaches By means of interdisciplinary examples this book showcases the relationship between people and plants across wide ranging and diverse

Migration, Participation and the Making of Homes Susanne Berliner, 2025-07-31 This book is an ethnographic inquiry into the socio ecological relationalities in an intercultural community garden in Germany created in 2015 as a Refugees Welcome project It explores this quietly political space of civic everyday which seeks to foster care for

both people and planet In three narrations the book offers power critical reflections on social encounters participation in equalities and home making In innovative ways the narrations also shed light on how people s doings are entangled with the more than human plants soils animals water and more Migration Participation and the Making of Homes increases our understanding of how communities navigate social heterogeneity and how people with refugee biographies shape their surroundings as active agents The narrations show that a cosmopolitan spirit is alive in this garden and the plants play a significant part in its expression Yet while the garden works as a retreat from hostilities that people may experience outside it also remains a racialised space Power relations work in complex ways positioning individuals as not belonging where conflicts occur At the same time in instances less shaped by the local habitus new dynamics develop between guest and host The narrations demonstrate how all people in the garden are engaged in unique home making processes and in the making of the shared home which is the garden The gardeners connect in the joy of tending and watching life grow as the plants speak in their own way about vital continuity Contributing to the social scientific exploration of the dynamics of migration belonging and community making in pluralistic societies this book takes a transdisciplinary shape entering into dialogue with literature from various fields As such it will be of interest for researchers and university students of all levels in the areas of sociology education social work anthropology environmental studies political science and related fields This book will also be useful for civil organisations working in refugee support and or integration policymakers and local governments

People, Plants, and Protected Areas John D. Tuxill, Gary Paul Nabhan, 2001 An invaluable practical guide to the management and conservation of plant resources in their natural habitats *Plant and Human Health, Volume 1* Munir Ozturk, Khalid Rehman Hakeem, 2018-10-02 Early anthropological evidence for plant use as medicine is 60 000 years old as reported from the Neanderthal grave in Iraq The importance of plants as medicine is further supported by archeological evidence from Asia and the Middle East Today around 1 4 billion people in South Asia alone have no access to modern health care and rely instead on traditional medicine to alleviate various symptoms On a global basis approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life threatening conditions that include diabetes hypertension and cancers As the demand for plant based medicine rises there is an unmet need to investigate the quality safety and efficacy of these herbals by the scientific methods Current research on drug discovery from medicinal plants involves a multifaceted approach combining botanical phytochemical analytical and molecular techniques For instance high throughput robotic screens have been developed by industry it is now possible to carry out 50 000 tests per day in the search for compounds which act on a key enzyme or a subset of receptors This and other bioassays thus offer hope that one may eventually identify compounds for treating a variety of diseases or conditions However drug development from natural products is not without its problems Frequent challenges encountered include the procurement of raw materials the selection and implementation of appropriate high throughput bioassays and the scaling up of preparative procedures Research scientists should therefore

arm themselves with the right tools and knowledge in order to harness the vast potentials of plant based therapeutics The main objective of Plant and Human Health is to serve as a comprehensive guide for this endeavor Volume 1 highlights how humans from specific areas or cultures use indigenous plants Despite technological developments herbal drugs still occupy a preferential place in a majority of the population in the third world and have slowly taken roots as alternative medicine in the West The integration of modern science with traditional uses of herbal drugs is important for our understanding of this ethnobotanical relationship Volume 2 deals with the phytochemical and molecular characterization of herbal medicine Specifically it focuess on the secondary metabolic compounds which afford protection against diseases Lastly Volume 3 discusses the physiological mechanisms by which the active ingredients of medicinal plants serve to improve human health Together this three volume collection intends to bridge the gap for herbalists traditional and modern medical practitioners and students and researchers in botany and horticulture

Significance of Indian Medicinal Plants and Mushrooms Dr. Ved Prakash, **Food Plants of the Sonoran Desert** Wendy C. Hodgson,2022-02-08 The seemingly inhospitable Sonoran Desert has provided sustenance to indigenous peoples for centuries Although it is to all appearances a land bereft of useful plants fully one fifth of the desert s flora are edible This volume presents information on nearly 540 edible plants used by people of more than fifty traditional cultures of the Sonoran Desert and peripheral areas Drawing on thirty years of research Wendy Hodgson has synthesized the widely scattered literature and added her own experiences to create an exhaustive catalog of desert plants and their many and varied uses Food Plants of the Sonoran Desert includes not only plants such as gourds and legumes but also unexpected food sources such as palms lilies and cattails all of which provided nutrition to desert peoples Each species entry lists recorded names and describes indigenous uses which often include nonfood therapeutic and commodity applications The agave for example is cited for its use as food and for alcoholic and nonalcoholic beverages syrup fiber cordage clothing sandals nets blankets

lances fire hearths musical instruments hedgerows soap and medicine and for ceremonial purposes The agave entry includes information on harvesting roasting and consumption and on distinguishing between edible and inedible varieties No other source provides such a vast amount of information on traditional plant uses for this region Written to be easily accessible to general readers the book is an invaluable compendium for anyone interested in the desert s hidden bounty Journal of the American Society of Mechanical Engineers American Society of Mechanical Engineers,1916 **Ji xie gong cheng shi** ,1917
