Wild Relatives of Cultivated Plants in India Anurudh Kumar Singh, 2017-08-14 This book provides a comprehensive overview of the wild relatives of crops and cultivated species found in India covering their distribution phylogenetic relationships with cultivated species traits that are of economic and breeding value and the perceived threats It highlights the opportunities the wild relatives of cultivated species offer in terms of new genes and allelic variability as well as several other exploitable economic and environmental benefits that can be harnessed with their conservation and cultivation This helps facilitate their use both directly and as part of the breeding program for related cultivated species filling the gaps of genetic variability in the primary gene pool It also discusses how they can be used in breeding programs using conventional technologies and the biotechnological approaches of recombinant DNA Transfer of natural genes using recombinant DNA known as Cisgenesis can accelerate the process of incorporating these natural genes without genetic drag of undesirable features and biosafety concerns and beyond taxonomic boundaries in response to the demand for new cultivars to meet the challenges of climate change and ever growing human population **Plant Inventory** ,1934 *Aspects of Plant Sciences: Polypodiaceous ferns of India* Parameswaran Krishnan Kutty Nair, 1985 Contributed articles **The Lepchas; Culture and Religion of a Himalayan People** Halfdan Siiger, 1967 **Out of Nature** Kara Rogers, 2012-02-01 About half of all species under threat of extinction in the world today are plants The loss of plant biodiversity is disturbing for many reasons but especially because it is a reflection of the growing disconnect between humans and nature Plants have been used for millennia in traditional systems of healing and have held a significant place in drug development for Western medicine as well Despite the recent dominance of synthetic drug production natural product discovery remains the backbone of drug development As the diversity of life on Earth is depleted and increasing numbers of species become lost to extinction we continue to lose opportunities to achieve advances in medicine Through stories of drug revelation in nature and forays into botany human behavior and conservation Kara Rogers sheds light on the multiple ways in which humans medicine and plants are interconnected Rogers also highlights the role that plant based products can play in encouraging conservation and protecting the heritage and knowledge of indigenous peoples The book delves into the complexity of biophilia the innate human attraction to life in the natural world and suggests that the reawakening of this drive is fundamental to expanding

conservation efforts and improving medicine Publisher information *The Kew Record of Taxonomic Literature Relating to Vascular Plants for ...* ,1989 **Inventory** United States.
