Primate Encounters Models Of Science Gender And Society:

Primate Encounters Shirley C. Strum, Linda Marie Fedigan, 2000 A study of primatology discussing its history the scientists in the field and the issues that have shaped its development particularly gender technology and the media

Primate Encounters Shirley Carol Strum, Linda Marie Fedigan, 2000 *Routledge Handbook of Human-Animal Studies* Garry Marvin, Susan McHugh, 2014-04-16 Human animal studies is an academic field that has grown exponentially over the past decade It explores the whys hows and whats of human animal relations why animals are represented and configured in different ways in human cultures and societies around the world how they are imagined experienced and given significance what these relationships might signify about being human and what about these relationships might be improved for the sake of the individuals as well as the communities concerned The Routledge Handbook of Human Animal Studies presents a collection of original essays from artists and scholars who have established themselves internationally on the basis of specific and significant new contributions to human animal studies This international interdisciplinary handbook will be of interest to students and scholars of human animal studies sociology anthropology biology environmental studies geography cultural studies history philosophy media studies gender studies literature psychology ethology and visual studies **Primate Life Histories, Sex Roles, and Adaptability** Urs Kalbitzer, Katharine M. Jack, 2018-10-29 Professor Linda M Fedigan Member of the Order of Canada and a Fellow of the Royal Society of Canada has made major contributions to our understanding of the behavioural ecology of primates Furthermore Linda Fedigan pioneered and continues to advance scholarship on the role of women in science as well as actively promoting the inclusion of women in the academy A symposium in honour of her career was held in Banff Alberta Canada in December 2016 during which former and current students and collaborators as well as scientists with similar research interests presented and discussed their work and their connections to Linda Fedigan These presentations and discussions are here presented as chapters in this festschrift The original works presented in this book are organized around four major research areas that have been greatly advanced and influenced by Linda Fedigan Primate life histories Sex roles gender and science Primate environment interactions Primate adaptation to changing environments

Primate Ethnographies Karen B. Strier, 2016-01-08 Applies an ethnographic perspective to the study of primates Primate Ethnographies 1 e is a collection of first person accounts of immersive field studies of primates people and institutions revealing the wide spectrum of primate science primatology Essays cover such primates as lemurs New World monkeys Old World monkeys and apes Readers experience the excitement of discovery and the challenges of primate field research Primate Ethnographies can be used as a textbook or a companion reader *Echoes of Our Origins* Shirley C. Strum, 2025-09-09 This book follows Dr Shirley Strum's 50 year journey with baboons in Kenya challenging assumptions about primate behavior and offering insights into human nature science and conservation Provided by publisher **The Promise of Contemporary Primatology** Erin P. Riley, 2019-08-19 This book argues for a contemporary primatology that

recognizes humans as integral components in the ecologies of primates This contemporary primatology uses a broadened theoretical lens and methodological toolkit to study primate behavior and ecology in increasingly anthropogenic contexts and seeks points of intersection and spaces for collaborative exchange across the natural sciences social sciences and humanities The book begins by exploring the American tradition of anthropology providing historical and disciplinary context for the emergence of field primatology and how it became a part of this tradition It then examines how primatology transformed into a field dominated by evolutionary approaches and highlights how the increasingly anthropogenic environments in which primates live present opportunities to understand primate adaptability at work In doing so it explores how an extended evolutionary approach can help explain behavioral variation in these contemporary environments Focus is then given to the ethnoprimateological approach a contemporary approach that provides a pluralistic framework drawing from the natural and social sciences and humanities needed to study human primate coexistence in the Anthropocene Finally the book considers how such a crossing of disciplines can inform primate conservation in the future An important interdisciplinary reassessment this book will be of significant interest to primatologists biological anthropologists and scholars of anthropology more generally as well as evolutionary and conservation biologists

Humans and Other Animals Prof. Samantha

Hurn,2012-04-20 What are our attitudes towards other animals and how does this affect our humanity This work of anthrozoology explores the myriad and evolving ways in which humans and animals interact the divergent cultural constructions of humanity and animality found around the world and individual experiences of other animals This book looks at case studies covering blood sports such as hunting fishing and bull fighting pet keeping and petism eco tourism and wildlife conservation working animals and animals as food It addresses the idea of animal exploitation raised by the animal rights movements as well as the anthropological implications of changing attitudes towards animal personhood and the rise of a posthumanist philosophy in the social sciences more generally

Centralizing Fieldwork Jeremy MacClancy, Agustín Fuentes,2010-12-01 Fieldwork is a central method of research throughout anthropology a much valued much vaunted mode of generating information But its nature and process have been seriously understudied in biological anthropology and primatology This book is the first ever comparative investigation across primatology biological anthropology and social anthropology to look critically at this key research practice It is also an innovative way to further the comparative project within a broadly conceived anthropology because it does not focus on common theory but on a common method The questions asked by contributors are what in the pursuit of fieldwork is common to all three disciplines what is unique to each how much is contingent how much necessary Can we generate well grounded cross disciplinary generalizations about this mutual research method and are there any telling differences Co edited by a social anthropologist and a primatologist the book includes a list of distinguished and well established contributors from primatology and biological anthropology

Gender in Cross-Cultural Perspective Adrienne E. Strong, Richard Powis,2024-08-19 This fully updated new edition of

Gender in Cross Cultural Perspective carefully introduces and responds to changes in anthropological approaches to and perspectives on gender. With two new editors and new authors from the Global South and underrepresented communities it combines theoretically and ethnographically based chapters to examine gender roles and ideology around the world. The book is divided thematically into five parts with the editors opening each section with a succinct introduction to the principal issues. The book retains some of the classic chapters while offering new contributions and extended discussions throughout on methodology. It also has entirely new contributions that reflect more recent developments in the discipline including more emphasis on LGBTQ communities, COVID and migration. This new edition also features additional support for teaching and learning including a film list and discussion questions that are now offered as supplemental online materials. The eighth edition of *Gender in Cross Cultural Perspective* continues to be an essential resource for undergraduate and graduate students encountering the anthropology of gender for the first time.

The Infanticide Controversy Amanda Rees, 2009-11-15. Infanticide in the natural world might be a relatively rare event but as Amanda Rees shows it has enormously significant consequences. Identified in the 1960s as a phenomenon worthy of investigation, infanticide had by the 1970s become the focus of serious controversy. The suggestion by Sarah Hrdy that it might be the outcome of an evolved strategy intended to maximize an individual's reproductive success sparked furious disputes between scientists, disagreements that have continued down to the present day. Meticulously tracing the history of the infanticide debates and drawing on extensive interviews with field scientists, Rees investigates key theoretical and methodological themes that have characterized field studies of apes and monkeys in the twentieth century. As a detailed study of the scientific method and its application to field research, *The Infanticide Controversy* sheds new light on our understanding of scientific practice, focusing in particular on the challenges of working in natural environments, the relationship between objectivity and interpretation in an observational science, and the impact of the public profile of primatology on the development of primatological research. Most importantly, it also considers the wider significance that the study of field science has in a period when the ecological results of uncontrolled human interventions in natural systems are becoming ever more evident.

Classifying Science Rick Szostak, 2007-11-03. Classification is the essential first step in science. The study of science as well as the practice of science will thus benefit from a detailed classification of different types of science. In this book, science is defined broadly to include the social sciences and humanities, is first unpacked into its constituent elements: the phenomena studied, the data used, the theories employed, the methods applied, and the practices of scientists. These five elements are then classified in turn. Notably, the classifications of both theory types and methods allow the key strengths and weaknesses of different theories and methods to be readily discerned and compared. Connections across classifications are explored: should certain theories or phenomena be investigated only with certain methods? What is the proper function and form of scientific paradigms? Are certain common errors and biases in scientific practice associated with particular phenomena, data, theories, or methods? The

classifications point to several ways of improving both specialized and interdisciplinary research and teaching and especially of enhancing communication across communities of scholars The classifications also support a superior system of document classification that would allow searches by theory and method used as well as causal links investigated **"Women, Workers, and Race in LIFE Magazine "** Dolores Flamiano,2017-07-05 The tension between social reform photography and photojournalism is examined through this study of the life and work of German gr ansel Mieth 1909 1998 who made an unlikely journey from migrant farm worker to Life photographer She was the second woman in that role after Margaret Bourke White Unlike her colleagues Mieth was a working class reformer with a deep disdain for Life s conservatism and commercialism In fact her work often subverted Life s typical representations of women workers and minorities Some of her most compelling photo essays used skillful visual storytelling to offer fresh views on controversial topics birth control vivisection labor unions and Japanese American internment during the Second World War Her dual role as reformer and photojournalist made her a desirable commodity at Life in the late 1930s and early 40s but this role became untenable in Cold War America when her career was cut short Today Mieth s life and photographs stand as compelling reminders of the vital yet overlooked role of immigrant women in twentieth century photojournalism **Women Workers and Race in LIFE Magazine** draws upon a rich array of primary sources including Mieth s unpublished memoir oral histories and labor archives The book seeks to unravel and understand the multi layered often contested stories of the photographer s life and work It will be of interest to scholars of photography history women s studies visual culture and media history **The Routledge Companion to Animal-Human History** Hilda Kean,Philip Howell,2018-09-03 The Routledge Companion to Animal Human History provides an up to date guide for the historian working within the growing field of animal human history Giving a sense of the diversity and interdisciplinary nature of the field cutting edge contributions explore the practices of and challenges posed by historical studies of animals and animal human relationships Divided into three parts the Companion takes both a theoretical and practical approach to a field that is emerging as a prominent area of study **Animals and the Practice of History** considers established practices of history such as political history public history and cultural memory and how animal human history can contribute to them **Problems and Paradigms** identifies key historiographical issues to the field with contributors considering the challenges posed by topics such as agency literature art and emotional attachment The final section **Themes and Provocations** looks at larger themes within the history of animal human relationships in more depth with contributions covering topics that include breeding war hunting and eating As it is increasingly recognised that nonhuman actors have contributed to the making of history The Routledge Companion to Animal Human History provides a timely and important contribution to the scholarship on animal human history and surrounding debates Current Controversies in Values and Science Kevin C. Elliott,Daniel Steel,2017-03-27 Current Controversies in Values and Science asks ten philosophers to debate five questions two philosophers per debate that are driving contemporary work in this

important area of philosophy of science The book is perfect for the advanced student building up her knowledge of the foundations of the field while also engaging its most cutting edge questions Introductions and annotated bibliographies for each debate preliminary descriptions of each chapter study questions and a supplemental guide to further controversies involving values in science help provide clearer and richer snapshots of active controversies for all readers

Long-Term Field Studies of Primates Peter M. Kappeler, David P. Watts, 2012-01-07 Some primate field studies have been on going for decades covering significant portions of individual life cycles or even multiple generations In this volume leading field workers report on the history and infrastructure of their projects in Madagascar Africa Asia and South America More importantly they provide summaries of their long term research efforts on primate behaviour ecology and life history highlighting insights that were only possible because of the long term nature of the study The chapters of this volume collectively outline the many scientific reasons for studying primate behaviour ecology and demography over multiple generations This kind of research is typically necessitated by the relatively slow life histories of primates Moreover a complete understanding of social organization and behaviour factors often influenced by rare but important events requires long term data collection Finally long term field projects are also becoming increasingly important foci of local conservation activities
