Representation of Rings by Sections John Dauns, Karl Heinrich Hofmann, 1968 **Recent Advances in the Representation Theory of Rings and C^* -Algebras by Continuous Sections** John R. Liukkonen, 1974 From March 20 through April 5 1973 the Mathematics Department of Tulane University organized a seminar on recent progress made in the general theory of the representation of rings and topological algebras by continuous sections in sheaves and bundles The seminar was divided into two main sections one concerned with sheaf representation the other with bundle representation The first was concerned with ringed spaces applications to logic universal algebra and lattice theory The second was almost exclusively devoted to C algebra and Hilbert space bundles or closely related material This collection represents the majority of the papers presented by seminar participants with the addition of three papers which were presented by title

Noncommutative Algebraic Geometry and Representations of Quantized Algebras A. Rosenberg, 2013-03-09 This book is based on lectures delivered at Harvard in the Spring of 1991 and at the University of Utah during the academic year 1992 93 Formally the book assumes only general algebraic knowledge rings modules groups Lie algebras functors etc It is helpful however to know some basics of algebraic geometry and representation theory Each chapter begins with its own introduction and most sections even have a short overview The purpose of what follows is to explain the spirit of the book and how different parts are linked together without entering into details The point of departure is the notion of the left spectrum of an associative ring and the first natural steps of general theory of noncommutative affine quasi affine and projective schemes This material is presented in Chapter I Further developments originated from the requirements of several important examples I tried to understand to begin with the first Weyl algebra and the quantum plane The book reflects these developments as I worked them out in reallife and in my lectures In Chapter 11 we study the left spectrum and irreducible representations of a whole lot of rings which are of interest for modern mathematical physics The classes of rings we consider include as special cases quantum plane algebra of q differential operators quantum Heisenberg and Weyl algebras quantum enveloping algebra of the Lie algebra sl_2 coordinate algebra of the quantum group SL_2 the twisted SL_2 of Woronowicz so called dispin algebra and many others

Algebras, Rings and Modules, Volume 2 Michiel Hazewinkel, Nadiya M. Gubarenis, 2017-04-11 The theory of algebras rings and modules is one of the fundamental domains of modern mathematics General algebra more specifically non commutative algebra is poised for major advances in the twenty first century together with and in interaction with combinatorics just as topology analysis and probability experienced in the twentieth century This is the second volume of *Algebras Rings and Modules Non commutative Algebras and Rings* by M Hazewinkel and N Gubarenis a continuation stressing the more important recent results on advanced topics of the structural theory of associative algebras rings and modules

Topological Methods in Galois Representation Theory Victor P.

Snaith, 2014-01-15 An advanced monograph on Galois representation theory by one of the world's leading algebraists this volume is directed at mathematics students who have completed a graduate course in introductory algebraic topology Topics include Abelian and nonabelian cohomology of groups characteristic classes of forms and algebras explicit Brauer induction theory and much more 1989 edition *Glider Representations* Frederik Caenepeel, Fred Van Oystaeyen, 2019-11-05 Glider Representations offer several applications across different fields within Mathematics thereby motivating the introduction of this new glider theory and opening numerous doors for future research particularly with respect to more complex filtration chains Features Introduces new concepts in the Theory of Rings and Modules Suitable for researchers and graduate students working in this area and as supplementary reading for courses in Group Theory Ring Theory Lie Algebras and Sheaf Theory The first book to explicitly outline this new approach to gliders and fragments and associated concepts [Linear Analysis and Representation Theory](#) Steven A. Gaal, 2012-12-06 In an age when more and more items are made to be quickly disposable or soon become obsolete due to either progress or other man caused reasons it seems almost anachronistic to write a book in the classical sense A mathematics book becomes an indispensable companion if it is worthy of such a relation not by being rapidly read from cover to cover but by frequent browsing consultation and other occasional use While trying to create such a work I tried not to be encyclopedic but rather select only those parts of each chosen topic which I could present clearly and accurately in a formulation which is likely to last The material I chose is all mathematics which is interesting and important both for the mathematician and to a large extent also for the mathematical physicist I regret that at present I could not give a similar account on direct integrals and the representation theory of certain classes of Lie groups I carefully kept the level of presentation throughout the whole book as uniform as possible Certain introductory sections are kept shorter and are perhaps slightly more detailed in order to help the newcomer progress with it at the same rate as the more experienced person is going to proceed with his study of the details *Algebras, Rings and Modules* Michiel Hazewinkel, Vladimir V. Kirichenko, 2007 As a natural continuation of the first volume of *Algebras Rings and Modules* this book provides both the classical aspects of the theory of groups and their representations as well as a general introduction to the modern theory of representations including the representations of quivers and finite partially ordered sets and their applications to finite dimensional algebras Detailed attention is given to special classes of algebras and rings including Frobenius quasi Frobenius right serial rings and tiled orders using the technique of quivers The most important recent developments in the theory of these rings are examined The Cartan Determinant Conjecture and some properties of global dimensions of different classes of rings are also given The last chapters of this volume provide the theory of semiprime Noetherian semiperfect and semidistributive rings Of course this book is mainly aimed at researchers in the theory of rings and algebras but graduate and postgraduate students especially those using algebraic techniques should also find this book of interest **Modular Representation Theory and Commutative Banach Algebras** David J. Benson, 2024-07-25 View

the abstract A Tour of Representation Theory Martin Lorenz, 2018 Offers an introduction to four different flavours of representation theory representations of algebras groups Lie algebras and Hopf algebras A separate part of the book is devoted to each of these areas and they are all treated in sufficient depth to enable the reader to pursue research in representation theory Tulane University Ring and Operator Theory Year, 1970-1971 Karl H. Hofmann, 2006-11-15 *The Based Ring of Two-Sided Cells of Affine Weyl Groups of Type $\widetilde{A}_{n-1}$* Nanhua Xi, 2002 In this paper we prove Lusztig's conjecture on based ring for an affine Weyl group of type $\widetilde{A}_{n-1}$ **An Algebraic Introduction to K-Theory** Bruce A. Magurn, 2002-05-20 This is an introduction to algebraic K theory with no prerequisite beyond a first semester of algebra including Galois theory and modules over a principal ideal domain The presentation is almost entirely self contained and is divided into short sections with exercises to reinforce the ideas and suggest further lines of inquiry No experience with analysis geometry number theory or topology is assumed Within the context of linear algebra K theory organises and clarifies the relations among ideal class groups group representations quadratic forms determinants quadratic reciprocity and Brauer groups of fields By including introductions to standard algebra topics tensor products localisation Jacobson radical chain conditions Dedekind domains semi simple rings exterior algebras the author makes algebraic K theory accessible to first year graduate students and other mathematically sophisticated readers Even if your algebra is rusty you can read this book the necessary background is here with proofs **New Directions in Homotopy Theory** Nitya Kitchloo, Mona Merling, Jack Morava, Emily Riehl, W. Stephen Wilson, 2018-05-29 This volume contains the proceedings of the Second Mid Atlantic Topology Conference held from March 12-13 2016 at Johns Hopkins University in Baltimore Maryland The focus of the conference and subsequent papers was on applications of innovative methods from homotopy theory in category theory algebraic geometry and related areas emphasizing the work of younger researchers in these fields **Integral Representations and Applications** Klaus W. Roggenkamp, 2006-11-14 **Recent Developments in Representation Theory** Alex Martsinkovsky, Gordana Todorov, Kiyoshi Igusa, 2016-08-26 This volume contains selected expository lectures delivered at the Maurice Auslander Distinguished Lectures and International Conference held May 1-6 2014 at the Woods Hole Oceanographic Institute Woods Hole MA Several significant developments of the last decade in representation theory of finite dimensional algebras are related to combinatorics Three of the five lectures in this volume deal respectively with the Catalan combinatorics the combinatorics of Gelfand-Zetlin polytopes and the combinatorics of tilting modules The remaining papers present history and recent advances in the study of left orders in left Artinian rings and a survey on invariant theory of Artin-Schelter regular algebras *Representation Theory of Finite Groups and Finite-Dimensional Algebras* Michler, Ringel, 2012-12-06 From April 1 1984 until March 31 1991 the Deutsche Forschungsgemeinschaft has sponsored the project Representation Theory of Finite Groups and Finite Dimensional Algebras The proposal for this project was submitted by B Huppert Mainz B Fischer Bielefeld G Michler Essen H Pahlings Aachen and C M Ringel Bielefeld in order to strengthen

the interaction between the different research areas in representation theory The Deutsche Forschungsgemeinschaft has given many research positions and fellowships for young algebraists enabling them to do research at their own universities or as visitors at well known research institutions in America Australia England and France The whole project benefitted very much from an extensive exchange programme between German and American scientists sponsored by the Deutsche Forschungsgemeinschaft and by the National Science Foundation of the United States This volume presents lectures given in a final conference and reports by members of the project It is divided into two parts The first part contains seven survey articles describing recent advances in different areas of representation theory These articles do not only concentrate on the work done by the German research groups but also inform on major developments of the subject at all The volume omits those topics already treated in book form In particular it does not contain a survey on K
