*Semiconductor Optical Modulators* Koichi Wakita, 2013-11-27 The introduction of GaAs AlGaAs double heterostructure lasers has opened the door to a new age in the application of compound semiconductor materials to microwave and optical technologies A variety and combination of semiconductor materials have been investigated and applied to present commercial uses with these devices operating at wide frequencies and wavelengths Semiconductor modulators are typical examples of this technical evolutions and have been developed for commercial use Although these have a long history to date we are not aware of any book that details this evolution Consequently we have written a book to provide a comprehensive account of semiconductor modulators with emphasis on historical details and experimental reports The objective is to provide an up to date understanding of semiconductor modulators Particular attention has been paid to multiple quantum well MQW modulators operating at long wavelengths taking into account the low losses and dispersion in silica fibers occurring at around 1.3 and 1.55  $\mu\text{m}$  At the present time MQW structures have been investigated but these have not been sufficiently developed to provide characteristic features which would be instructive enough for readers One problem is the almost daily publication of papers on semiconductor modulators Not only do these papers provide additional data but they often modify the interpretations of particular concepts Almost all chapters refer to the large number of published papers that can be consulted for future study

Broadband Optical Modulators Antao Chen, Edmond Murphy, 2016-04-19 provides the full exciting story of optical modulators a comprehensive review from the fundamental science to the material and processing technology to the optimized device design to the multitude of applications for which broadband optical modulators bring great value Especially valuable in my view is that the authors are internationally
