

Glossary of IT Terms

ACCESS POINT (AP)

A device that allows wireless computers and other devices to communicate with a wired network.

ACTIVE DIRECTORY

An Active Directory manages the identities and relationships of distributed resources that make up a network. It stores information about network-based entities and provides a consistent way to name, describe, locate, access, manage and secure information about these resources.

BANDWIDTH

A measurement of the amount of data that can be transmitted over a network at any given time. The higher the network's bandwidth, the greater the volume of data that can be transmitted.

CACHE

A region of computer memory where frequently accessed data can be stored for rapid access.

CGI

A Common Gateway Interface is a mechanism used by most web servers to process data received from a client browser. CGI scripts contain the instructions that tell the web server what to do with the data.

CLOUD

A network of remote servers hosted on the Internet and used to store, manage, and process data in place of local servers or personal computers.

IaaS

Infrastructure as a Service: In the most basic cloud-service model, providers of IaaS offer computers - physical or virtual machines - and other resources.

IT ASSESSMENT

The process of gathering information on part or whole of an IT network infrastructure, and then presented in a detailed report. This report typically analyzes the current state of technology or services and identifies areas needing improvement.

PING

Packet Internet Groper; a utility used to determine whether a particular computer is currently connected to the Internet. It works by sending a packet to the specified IP address and waiting for a reply.

MALWARE

Software programs designed to damage or do other unwanted actions on a computer; common examples of malware include viruses, worms, trojan horses, and spyware.

NaaS

Network as a service (NaaS) is a business model for delivering enterprise-wide area network services virtually on a subscription basis.

VPN

Virtual Private Networking is a means of securely accessing resources on a network by connecting to a remote access server through the Internet or other networks.
