Sensory Abilities Of Cetaceans Laboratory And Field Evidence:

Sensory Abilities of Cetaceans Jeanette A. Thomas, Ronald A. Kastelein, 2013-11-11 This book evolved through the efforts of several organizations and the dedication of many individuals In 1987 we received a request to propose a workshop topic for the Fifth International Theriological Congress ITC to be held in August 1989 in Rome Italy After looking up the meaning of the word theriological in the dictionary and discovering that it pertains to mammalian behavior we decided a symposium on sensory abilities of whales and dolphins would be an interesting topic The ITC convenes only every five years and has the distinction of being very well attended by scientists from around the world We thought that hosting a workshop in conjunction with the ITC would attract a variety of international scientists that rarely have the opportunity to interact Fortunately for all involved our prediction was correct The first two days of the workshop 23-24 August 1989 were held in conjunction with ITC and the nearly 1 000 attending scientists were able to view our posters and listen to lectures The third day was limited to only about 65 invited scientists who were divided into topical working groups chaired by a rapporteur

Hearing by Whales and Dolphins Whitlow W.L. Au, Richard R. Fay, 2012-12-06 Cetaceans inhabit oceans seas and even some rivers throughout the world Hearing and sound production are thought to serve crucial functions in the behavior natural history or life cycle of all of these animals Although difficulties in studying large aquatic animals have limited experimental auditory research on many species knowledge about the acoustic behavior of these animals has been increasing dramatically In this volume experts in different areas of the field provide an overview of the bioacoustics of whales and dolphins as well as a thorough introduction to the subject for investigators of hearing in other animals Topics covered include the structure and function of cetacean auditory systems the unique sound production system of odontocetes acoustic communication psychoacoustics echolocation and models of sound propagation

Echolocation in Bats and Dolphins Jeanette A. Thomas, Cynthia F. Moss, Marianne Vater, 2004 Although bats and dolphins live in very different environments are vastly different in size and hunt different kinds of prey both groups have evolved similar sonar systems known as echolocation to locate food and navigate the skies and seas While much research has been conducted over the past thirty years on echolocation in bats and dolphins this volume is the first to compare what is known about echolocation in each group to point out what information is missing and to identify future areas of research Echolocation in Bats and Dolphins consists of six sections mechanisms of echolocation signal production the anatomy and physiology of signal reception and interpretation performance and cognition ecological and evolutionary aspects of echolocation mammals theoretical and methodological topics and possible echolocation capabilities in other mammals including shrews seals and baleen whales Animal behaviorists ecologists physiologists and both scientists and engineers who work in the field of bioacoustics will benefit from this book

Dolphin Communication and Cognition Denise L. Herzing, Christine M. Johnson, 2023-10-31 Experts survey the latest research on dolphin communication and cognition offering a comprehensive reference to findings in

the laboratory and from the field Dolphin researchers have collected an impressive amount of data over the last twenty years thanks to advances in technology for monitoring recording and analyzing dolphin behavior as well as increasing interest in exploring and modeling dolphins cognitive capacities This volume offers a comprehensive reference to the latest research on dolphin communication and cognition reporting on findings from both the laboratory and the field The contributors review a wide range of topics including vocalization abstract reasoning abilities imitation and learning social cognition echolocation and ethical issues in working with cetaceans The book begins by examining the dolphin brain and its evolution the anatomy of its unique sound production and reception systems and its sensory abilities It next treats communication reviewing the complexity of dolphins vocalization and then describes research on cognition from both experimental and developmental perspectives Finally the book considers the future of dolphin research including a series of provocative questions that remain unanswered posed by the volume s expert contributors Contributors Mats Amundin Whitlow Au Ted W Cranford Nicola Erdsack John Ford Wolf Hanke Louis M Herman Denise L Herzing Christine M Johnson Petr Krysl Stan Kuczaj Marc Lammers Lori Marino Paul Nachtigall Julie Oswald Adam A Pack Heidi Pearson Sam Ridgway Jeanette Thomas Randall Wells Thomas I White Hal Whitehead Kelley Winship Bernd W rsig Mariana Islands Range Complex ,2010 *The Exploitation of Mammal Populations* V.J. Taylor,N. Dunstone,2012-12-06 Human exploitation of other mammals has passed through three historical phases distinct in their ecological significance though overlapping in time Initially Homo sapiens was a predator particularly of herbivores but also of fur bearing predators From about 11 000 years ago goats and sheep were domesticated in the Middle East rapidly replacing gazelles and other game as the principal source of meat The principal crops including wheat and barley were taken into agriculture at about the same time and the resulting Neolithic farming culture spread slowly from there over the subsequent 10 500 years In a few places such as Mexico Peru and China this Middle Eastern culture met and merged with agricultural traditions that had made a similar but independent transition These agricultural traditions provided the essential support for the industrial revolution and for a third phase of industrial exploitation of mammals In this chapter these themes are drawn out and their ecological significance is investigated Some of the impacts of humans on other mammals require consideration on a world wide basis but the chapter concentrates parochially on Great Britain What have been the ecological consequences of our exploitation of other mammals 2 2 HISTORICAL PHASES OF EXPLOITATION 2 2 1 Predatory man Our nearest relatives chimpanzees orang utans and gorillas are essentially forest species deriving most of their diet from the fruits of forest trees and the shoots and leaves of plants **Hawaii Range Complex** ,2008 **Southern California Range Complex** ,2008 Review of the Effects of Aircraft Overflights on Wildlife Ann E. Bowles,1994 **Marine Mammals and Noise** W. John Richardson,Charles R. Greene Jr.,Charles I. Malme,Denis H. Thomson,2013-10-22 Many marine mammals communicate by emitting sounds that pass through water Such sounds can be received across great distances and can influence the behavior of these undersea creatures In the past few decades the

oceans have become increasingly noisy as underwater sounds from propellers sonars and other human activities make it difficult for marine mammals to communicate This book discusses among many other topics just how well marine mammals hear how noisy the oceans have become and what effects these new sounds have on marine mammals The baseline of ambient noise the sounds produced by machines and mammals the sensitivity of marine mammal hearing and the reactions of marine mammals are also examined An essential addition to any marine biologist's library **Marine Mammals and Noise** will be especially appealing to marine mammalogists researchers policy makers and regulators and marine biologists and oceanographers using sound in their research Philosophy of the Environment Sophie Grace Chappell, 2020-03-31 No detailed description available for The Philosophy of the Environment

An Introduction to Marine Mammal Biology and Conservation Simmonds, M.P, Bauer, A, Parsons, ECM, Wright, A.J, McCafferty, D, 2013 The charismatic mammals that live in the ocean are a constant source of interest both for scientists and our society at large Their biology behavior and conservation are of utmost importance as a vast number of species are currently threatened Intended for the upper level undergraduate or graduate student within biology marine biology or conservation environmental science An Introduction to Marine Mammal Biology and Conservation provides a broad introduction to marine mammal biology using cutting edge information and student friendly learning tools The text begins with chapters on the evolution and classification of marine mammals and their general biology It moves on to discuss the behavior and ecology of different groups of marine mammals such as polar bears otters and cetaceans Part 3 dives into many different conservation issues facing marine mammals as well as discussions on how they can be addressed Closing chapters provide information on how scientists study marine mammals how society can enjoy observing the animals while making sure they are preserved and a word to students looking to pursue a career with marine mammals Helpful Sidebars are included throughout to refresh basic biological information Includes hot topic discussion boxes written by top researchers in the field Point Counterpoints on controversial issues make for great in class discussion Intended for the upper level undergraduate or graduate course within biology marine biology or conservation environmental science 2013 350 pages

Cerebral Cortex Edward G. Jones, Alan Peters, 2012-12-06 The cerebral cortex especially that part customarily designated neocortex is one of the hallmarks of mammalian evolution and reaches its greatest size relatively speaking and its widest structural diversity in the human brain The evolution of this structure as remarkable for the huge numbers of neurons that it contains as for the range of behaviors that it controls has been of abiding interest to many generations of neuroscientists Yet few theories of cortical evolution have been proposed and none has stood the test of time In particular no theory has been successful in bridging the evolutionary gap that appears to exist between the pallium of non mammalian vertebrates and the neocortex of mammals Undoubtedly this stems in large part from the rapid divergence of non mammalian and mammalian forms and the lack of contemporary species whose telencephalic wall can be seen as having transitional characteristics The monotreme cortex for example is unquestionably

mammalian in organization and that of no living reptile comes close to resembling it Yet anatomists such as Ramon y Cajal on examining the finer details of cortical structure were struck by the similarities in neuronal form particularly of the pyramidal cells and their predisposition to laminar alignment shared by representatives of all vertebrate classes

The Sonar of Dolphins Whitlow W.L. Au, 2012-12-06 Over the ages humans have always been fascinated by dolphins This fascination heightened in the 1950s when oceanariums and aquariums began to use dolphins as show performers to demonstrate their prowess and display how tractable and trainable they were in part due to their extraordinary ability to echolocate This is the first book to present a comprehensive and organized treatise on dolphin biosonar Such an effort is long overdue since there is a paucity of books on this subject The book introduces concepts ranging from physics to the creation of mathematical models as an aid to the quantification and understanding of biosonar capabilities Topics further range from auditory pathways and processes to the anatomy of the dolphin's head to signal processing models to a comparison of the sonar of bats and dolphins
