Setting Priorities For Land Conservation:

Setting Priorities for Land Conservation National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Scientific and Technical Criteria for Federal Acquisition of Lands for Conservation, 1993-02-01 This book responds to a congressional request to evaluate criteria by which land is acquired under the Land and Water Conservation Fund. The committee reviews criteria and procedures by which four agencies acquire lands for conservation, examines the historic public policy and scientific bases of criteria, and compares them with nongovernmental organizations and assesses the effectiveness of the agencies in preserving natural resources while achieving agency objectives. **Setting Priorities for Land Conservation** National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Scientific and Technical Criteria for Federal Acquisition of Lands for Conservation, 1993-02-01 This book responds to a congressional request to evaluate criteria by which land is acquired under the Land and Water Conservation Fund. Nature-friendly Land Use Practices at Multiple Scales Rebecca Lynn Kihlslinger, James M. McElfish, 2009 This unique book is organized around eight detailed case studies of private land developers, local governments, and public agencies that have worked across jurisdictional and ecological boundaries to effectively address habitat conservation. The book includes two essays by leading conservation biologists who link planning at scale with sound land use decisions. Conservation Trusts Sally K. Fairfax, Darla Guenzler, 2001 In the wake of the Exxon Valdez oil spill, a conservation trust helped stabilize and regenerate the damaged area. When bird habitats along the Platte River were threatened by Grayrocks Dam, a similar trust came to their rescue. And if a family wants to protect its land for future generations, establishing a trust may be the best solution. For more than a century, bequests of land and funds for environmental protection have been common, but in recent decades, the trusts used to address conservation issues and resolve environmental disputes have diversified and grown significantly. This book examines a variety of conservation organizations built on or close to trust principles: some government creations, some private, some combinations of the two, to explain how conservation trusts are created and how they work. It explores strengths and weaknesses of the trust concept, considers the widespread use of land trusts, and presents case studies that both illustrate successes and give instructive examples of potential pitfalls. Drawing on cases from Maine to Hawaii, the authors examine the different kinds and configurations of trusts. They consider government trusts that blend federal, state, and local agencies into a single entity or that derive funding from outside legislative and

executive channels trusts established by government and private cooperation to share responsibility for jointly held and managed resources and trusts established by private organizations and families For each type they explain why each is created how it operates and whether it has been proven effective They also address the important issue of accountability and consider when a trust is not the answer to a problem As more Americans reject federal control of land in favor of local determination land trusts have become the most popular tool for the preservation of land habitats and species And as the sharing of authority among public private and diverse government partners becomes more prevalent sound guidelines for establishing effective trusts are critical This book shows how the trust template provides an invaluable approach for future conservation efforts and is a primer for anyone involved in environmental management *New and Forthcoming Books*

National Academy Press (U.S.),1993 **Private Property and the Endangered Species Act** Jason F. Shogren,2013-10-01 Our whole nation benefits from the preservation of natural habitats and their diversity of animal and plant species yet small groups of private landowners often bear most of the costs of setting land aside for conservation purposes This imbalance has generated many conflicts since the passage of the Endangered Species Act in 1973 and remains one of the most controversial issues to be resolved as the ESA makes its way through Congress for reauthorization To provide policy makers landowners and other stakeholders in the ESA debates with impartial baseline information this book offers multidisciplinary perspectives on the role that private property plays in protecting endangered species in the United States The opening chapter traces the evolution of the ESA and set forth the parameters of the debate over regulation of private property Four subsequent chapters explore the judicial and economic implications of ESA and suggest how issues of scale and diversity affect the implementation of the ESA on private property The volume concludes with eight principles to help frame the ongoing ESA reauthorization debate developed by the University of Wyoming s Institute for Environment and Natural Resources Policy Board the sponsor of the research presented in this book **Department of the Interior and Related Agencies**

Salzer,John W. Willoughby,James P. Gibbs,2009-05-11

Monitoring Plant and Animal Populations offers an overview of population monitoring issues that is accessible to the typical field biologist and land managers with a modest statistical background. The text includes concrete guidelines for ecologists to follow to design a statistically defensible monitoring program. User friendly practical guide written in a highly readable format. The authors provide an interdisciplinary scope to address the current widespread interest in monitoring in many environmental fields including pure and applied ecology, conservation biology, and wildlife management. Emphasizes the role of monitoring in adaptive management. Defines important terminology and contrasts monitoring with other data collection activities. Covers the applicable principles of sampling and shows how to design a monitoring project. Provides a step by step overview of the monitoring process illustrated by flow charts and references. The authors also offer guidelines for analyzing and interpreting monitoring data. Illustrates the foundation of management objectives and describes their components, types, and development. Describes common field techniques for measuring important attributes of animal and plant populations. Reviews different methods for recording monitoring data in the field, managing the data, and communicating data to policymakers.

Species at Risk Jason F. Shogren, 2014-05-14

Protecting endangered species of animals and plants is a goal that almost everyone supports in principle but in practice private landowners have often opposed the regulations of the Endangered Species Act which they argue unfairly limits their right to profit from their property. To encourage private landowners to cooperate voluntarily in species conservation and to mitigate the economic burden of doing so, the government and nonprofit land trusts have created a number of incentive programs including conservation easements, leases, habitat banking, habitat conservation planning, safe harbors, candidate conservation agreements, and the no surprise policy. In this book, lawyers, economists, political scientists, historians, and zoologists come together to assess the challenges and opportunities for using economic incentives as compensation for protecting species at risk on private property. They examine current programs to see how well they are working and also offer ideas for how these programs could be more successful. Their ultimate goal is to better understand how economic incentive schemes can be made both more cost effective and more socially acceptable while respecting a wide range of views regarding opportunity costs, legal standing, biological effectiveness.
