universe was an appropriate site for the synthesis of the elements they became deeply involved in the question of cosmic nucleosynthesis and particularly the synthesis of the light elements In the course of this work they developed a general relativistic model of the expanding universe with physics folded in which led in a progressive logical sequence to our prediction of the existence of a present cosmic background radiation some seventeen years before the observation of such radiation was reported by Penzias and Wilson In addition they carried out with James W Follin Jr a detailed study of the physics of what was then considered to be the very early universe starting a few seconds after the Big Bang which still provides a methodology for studies of light element nucleosynthesis Because of their involvement they bring a personal perspective to the subject They present a picture of what is now believed to be the state of knowledge about the evolution of the expanding universe and delineate the story of the development of the Big Bang model as they have seen and lived it from their own unique vantage point **The Book Review** ,2000 *Journeying the Cosmos* Barrett Williams,ChatGPT,2024-08-21
