Machines With A Purpose:

Machines with a Purpose H. H. Rosenbrock, 1990 There is at present a widespread unease about the direction in which our technology is taking us apparently against our will Advances continue to damage the environment and reduce human work to the trivial mechanical repetition of actions which have no human meaning Attempts to design technology which complements rather than rejects human skills are all too often frustrated by the current scientific belief that man is a machine and what is more that he can contribute nothing that cannot equally well be contributed by a machine This challenging and stimulating book refutes four centuries of science based on strictly causal explanations It shows that man and nature can be viewed as machines with a purpose and that the advancement of technology can be to the benefit and not the detriment of the human race and the environment

This book explores the domain of reliability engineering in the context of machine tools. Failures of machine tools not only jeopardize users' ability to meet their due date commitments but also lead to poor quality of products, slower production, down time losses, etc. Poor reliability and improper maintenance of a machine tool greatly increases the life cycle cost to the user. Thus the application area of the present book, i.e. machine tools, will be equally appealing to machine tool designers, production engineers, and maintenance managers. The book will serve as a consolidated volume on various dimensions of machine tool reliability and its implications from manufacturers' and users' point of view. From the manufacturers' point of view, it discusses various approaches for reliability and maintenance based design of machine tools. In specific, it discusses simultaneous selection of optimal reliability configuration and maintenance schedules, maintenance optimization under various maintenance scenarios, and cost based FMEA. From the users' point of view, it explores the role of machine tool reliability in shop floor level decision making. In specific, it shows how to model the interactions of machine tool reliability with production scheduling, maintenance scheduling, and process quality control.
