**from Food** Myriam M.-L. Grundy,Peter J. Wilde,2021-01-19 The structure of a food influences the way it is transformed  
during processing and digestion This in turn has an impact on nutrient bioaccessibility release and digestibility and  
subsequently on the physiological response and health of the individual who consumes that food Although evidence exists on  
the health benefits associated with the inclusion of certain lipid rich foods e g nuts dairy products and fish in the diet the  
mechanisms that explain the physiological effects and the long term benefits are not well understood Lipids in themselves  
have many beneficial health effects they are a source of energy and essential fatty acids they are structural components of  
cell membranes they are required to solubilise fat soluble compounds and they serve as precursors of hormones In addition  
the overall structure of the food containing the lipids plays a crucial role in determining health benefits notably by  
influencing lipid bioaccessibility and digestibility Bioaccessibility and digestibility of lipids from food uniquely focuses on the  
physico chemical properties of lipids and lipid rich food as well as the subsequent effects on human health Chapters from  
experts in food digestion examine food structure at both the macro and micro levels covering lipids from plant and animal  
food products The editors have developed the book for dietitians nutritionists and food scientists Clinicians and other health  
professionals educators in nutrition and others working in the food industry will also find the material relevant      *Current*
