Macromolecular Synthesis Volume :

Macromolecular Synthesis James A. Moore, 1978 *Macromolecular Synthesis*, 1978 **Macromolecular Crystallography Protocols, Volume 1** Sylvie Doublié, 2008-02-04 Macromolecular Crystallography Protocols now in two volumes examines major developments that have occurred since publication of the acclaimed first edition nearly a decade ago Volume 1 Preparation and Crystallization of Macromolecules and Volume 2 Structure Determination explore recent advances that have accelerated the pace of structural determination and made crystallography accessible to a broader range of investigators Volume 1 is composed of detailed protocols for the preparation and optimization of crystals including tips from the experts on the best methods for inducing proteins to adopt their crystalline form Volume 2 complements the first volume by addressing laboratory techniques for crystal handling and structural characterization as well as computational techniques for data collection phasing and refinement The volume concludes with a detailed and insightful survey of available crystallographic software These volumes will be an indispensable reference for obtaining macromolecular crystals and determining their three dimensional structure Macromolecular Syntheses William J. Bailey, William J.. Bailey, 1972

Macromolecular Syntheses, 1977 A periodic publication of methods for the preparation of macromolecules

Macromolecular Syntheses Emerson L. Wittbecker, 1963 *Macromolecules* H.G. Elias, 2013-11-11 The second edition of this textbook is identical with its fourth German edition and it thus has the same goals precise definition of basic phenomena a broad survey of the whole field integrated representation of chemistry physics and technology and a balanced treatment of facts and comprehension The book thus intends to bridge the gap between the often oversimplified introductory textbooks and the highly specialized texts and monographs that cover only parts of macromolecular science The text intends to survey the whole field of macromolecular science Its organization results from the following considerations The chemical structure of macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of polymers Properties depend on structure Solution properties are thus discussed in Part II solid state properties in Part III There are other reasons for discussing properties before synthesis For example it is difficult to understand equilibrium polymerization without knowledge of solution thermodynamics the gel effect without knowledge of the glass transition temperature etc Part IV treats the principles of macromolecular syntheses and reactions *Handbook of Polymer Synthesis* Hans R. Kricheldorf, Oskar Nuyken, Graham Swift, 2004-11-27 An in depth review of important preparative methods for the synthesis and chemical modification of polymers this authoritative second edition examines the advantages and limitations of various polymerization applications and procedures It features new approaches and innovative strategies from the most prominent industry and academic laboratories Macromolecules Hans-Georg Elias, 2013-06-29 Like so many of its kind this textbook originated from the requirements of teaching While lecturing on macromolecular science as a required subject for chemists and materials scientists on the undergraduate

graduate and postgraduate levels at Swiss Federal Institute of Technology at Zurich 1960 1971 I needed a one volume textbook which treated the whole field of macromolecular science from its chemistry and physics to its applications in a not too elementary manner This textbook thus intends to bridge the gap between the often oversimplified introductory books and the highly specialized texts and monographs that cover only parts of macromolecular science This first English edition is based on the third German edition 1975 which is about 40% different from the first German edition 1971 a result of rapid progress in macromolecular science and the less rapid education of the writer This text intends to survey the whole field of macromolecular science Its organization results from the following considerations The chemical structure of macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of macro molecules Properties depend on structure Solution properties are thus discussed in Part II solid state properties in Part III There are other reasons for discussing properties before syntheses For example it is difficult to under stand equilibrium polymerization without knowledge of solution thermody of the glass temperature etc

Heimer, 2021-05-30 The area of polyamines is presented in this useful two volume publication Basic information describing the role of polyamines in the processes of growth and differentiation is given Also included are data on the regulation of polyamine biosynthesis and metabolism and their interactions with nucleic acids Several chapters are devoted to the role of polyamines in various aspects of plant biology with a special emphasis on their participation in the response of plants to extreme environments Special attention is given to the use of inhibitors of polyamine biosynthesis as potential antitumor and antiproliferative agents Additionally progress in the molecular biology and genetic engineering of genes coding for polyamine biosynthetic enzymes is described Cancer researchers biologists geneticists biochemists physiologists and clinicians will find this volume indispensable

Macromolecular Architectures Jöns G. Hilborn, 2003-07-03 Molecular manipulation of nano and microstructures paves the way to produce organic polymer materials by design Such architectures comprise both the synthesis and the kinetics and thermodynamics of macromolecular organization and is the theme of this volume The book consists of four articles reviewing living polymerization to produce precisely defined linear polyesters comparing them to other living polymerization techniques The articles also deal with the synthesis of polymeric dendrimers either by the convergent or divergent approach block copolymers synthesis to define micromorphology in high performance polymers and thereby tailoring their thermal chemical mechanical and dielectrical properties and finally kinetics and thermodynamics for microstructural organization in macroporous thermosets

Fundamentals of Polymerization Broja Mohan Mandal, 2013 Over the last twenty years the field of the chemistry of polymerization witnessed enormous growth through the development of new concepts catalysts processes etc Examples are non classical living polymerizations group transfer polymerization living carbocationic polymerization living radical polymerization and living ring opening metathesis polymerization ROMP new catalysts metallocenes and late transition metal catalysts for stereospecific polymerization Schrock and Grubbs catalyst for ROMP among others and new processes such as miniemulsion microemulsion polymerization and dispersion polymerization in polar solvents Apart from the developments in the chemistry of polymerization methods have been developed for the evaluation of highly reliable rate constants of propagation in radical as well as cationic polymerization All these have revolutionized the field of synthetic polymer chemistry In the book fundamentals of both the new and old polymerization chemistry have been dealt with The new chemistry has been given nearly equal space along with the old
