Chapter 4 explains the notion of looping implemented using for and while statements It also explains how to read data from a file and write results to a file Chapter 5 formally treats with functions enabling a large program to be broken up into smaller manageable units which work together to solve a given problem Chapter 6 is devoted to characters and strings In Julia we can work with them as seamlessly as we do with numbers Chapter 7 tackles array processing which is significantly easier in Julia than other languages Chapter 8 is about sorting and searching techniques Sorting puts data in an order that can be searched more quickly easily and makes it more palatable for human consumption Chapter 9 introduces structures enabling us to group data in a form that can be manipulated more easily as a unit Chapter 10 deals with two useful data structures dictionaries and sets These enable us to solve certain kinds of problems more easily and conveniently than we can without them This book is intended for anyone who is learning programming for the first time The presentation is based on the fact that many students though not all have difficulties in learning programming To overcome this the book uses an approach which provides clear examples detailed explanations of very basic concepts and numerous interesting problems not just artificial exercises whose only purpose is to illustrate some language feature
