Modern Mathematical Methods in Transport Theory Greenberg, Polewczak, 2013-11-22 The Eleventh International Transport Theory Conference and Symposium in honor of the sixty fifth birthday of Kenneth Case and the sixtieth birthday of Paul Zweifel was held in Blacksburg Virginia during May 22 26 1989 on the campus of Virginia Polytechnic Institute and State University Virginia Tech This volume consists of a selection of the invited papers delivered at the Conference and represents a cross section of the research currently being carried out in the field of transport theory The volume is divided into two sections The Symposium lectures are intended each to summarize an important aspect of transport theory as well as to present timely new results of the author s research interest The Conference lectures are contributions of each author on his current research As has been the custom in this series of conferences each lecturer was invited to participate by the organizing committee of the Conference W Greenberg Virginia Tech chairman V Boffi Universita di Firenze N Corngold California Institute of Technology B Ganapol University of Arizona N McCormick University of Washington P Nelson Texas Tech G Pomraning University of California Los Angeles The Eleventh International Transport Theory Conference was funded by generous contributions from Science Applications International Corporation R Beyster president and from Virginia Polytechnic Institute and State University Conference participants and we believe researchers in this and related areas are indebted to these organizations We would like to thank Lamberto Rondoni in the graduate program at Virginia Tech for proofreading manuscripts of all the Italian contributors

New Results in Operator Theory and Its Applications Israel Gohberg, Yuri I. Lyubich, 1997-08-19 This volume is dedicated to the memory of Israel Glazman an outstanding personality and distinguished mathematician the author of many remarkable papers and books in operator theory and its applications The present book opens with an essay devoted to Glazman s life and scientific achievements It focusses on the areas of his unusually wide interests and consists of 18 mathematical papers in spectral theory of differential operators and linear operators in Hilbert and Banach spaces analytic operator functions ordinary and partial differential equations functional equations mathematical physics nonlinear functional analysis approximation theory and optimization and mathematical statistics The book gives a picture of the current state of some important problems in areas of operator theory and its applications and will be of interest to a wide group of researchers working in pure and applied mathematics

Toward General Theory Of Differential-operator And Kinetic Models Nikolay Sidorov, Denis Sidorov, Alexander V Sinitsyn, 2020-03-13 This volume provides a comprehensive introduction to the modern theory of differential operator and kinetic models including Vlasov Maxwell Fredholm Lyapunov Schmidt branching equations to name a few This book will bridge the gap in the considerable

body of existing academic literature on the analytical methods used in studies of complex behavior of differential operator equations and kinetic models This monograph will be of interest to mathematicians physicists and engineers interested in the theory of such non standard systems Mathematical Topics in Nonlinear Kinetic Theory II N. half of the papers in this volume are based on lectures which were presented at a conference at Leipzig University in August 1994 which was dedicated to Vladimir Petrovich Potapov He would have been eighty years old These have been supplemented by 1 Historical material based on reminiscences of former colleagues students and associates of V P Potapov 2 Translations of a number of important papers which serve to clarify the Potapov approach to problems of interpolation and extension as well as a number of related problems and methods and are relatively unknown in the West 3 Two expository papers which have been especially written for this volume For purposes of discussion it is convenient to group the technical papers in this volume into six categories We will now run through them lightly first listing the major theme then in parentheses the authors of the relevant papers followed by discussion Some supplementary references are listed at the end OT72 which appears frequently in this volume refers to Volume 72 in the series Operator Theory Advances and Applications It was dedicated to V P Potapov 1 Multiplicative decompositions Yu P Ginzburg M S Livsic I V Mikhailova V I Smirnov

Schur Functions, Operator Colligations, and Reproducing Kernel Pontryagin Spaces Daniel Alpay,Aad Dijksma,James Rovnyak,Hendrik de Snoo,2012-12-06 Generalized Schur functions are scalar or operator valued holomorphic functions such that certain associated kernels have a finite number of negative squares This book develops the realization theory of such functions as characteristic functions of coisometric isometric and unitary colligations whose state spaces are reproducing kernel Pontryagin spaces This provides a modern system theory setting for the relationship between invariant subspaces and factorization operator models Krein Langer factorizations and other topics The book is intended for students and researchers in mathematics and engineering An introductory chapter supplies background material including reproducing kernel

Pontryagin spaces complementary spaces in the sense of de Branges and a key result on defining operators as closures of linear relations The presentation is self contained and streamlined so that the indefinite case is handled completely parallel to the definite case *Journal of analysis and its applications* ,1982 Mathematical Aspects of Computerized Tomography G.T. Basor,I. Gohberg,2012-12-06 This volume is dedicated to Harold Widom a distinguished mathematician and renowned expert in the area of Toeplitz Wiener Hopf and pseudodifferential operators on the occasion of his sixtieth birthday The book opens with biographical material and a list of the mathematician's publications this being followed by two papers based on Toeplitz lectures which he delivered at Tel Aviv University in March 1993 The rest of the book consists of a selection of papers containing some recent achievements in the following areas Szeg Widom asymptotic formulas for determinants of finite sections of Toeplitz matrices and their generalizations the Fisher Hartwig conjecture random matrices analysis of kernels of Toeplitz matrices projectional methods and eigenvalue distribution for Toeplitz matrices the Fredholm theory for convolution type operators the Nehari interpolation problem with generalizations and applications and Toeplitz Hausdorff type theorems The book will appeal to a wide audience of pure and applied mathematicians One-Dimensional Linear Singular Integral Equations I. Gohberg,N. Krupnik,2012-12-06 This book is an introduction to the theory of linear one dimensional singular integral equations It is essentially a graduate textbook Singular integral equations have attracted more and more attention because on one hand this class of equations appears in many applications and on the other it is one of a few classes of equations which can be solved in explicit form In this book material of the monograph 2 of the authors on one dimensional singular integral operators is widely used This monograph appeared in 1973 in Russian and later in German translation 3 In the final text version the authors included many addenda and changes which have in essence changed character structure and contents of the book and have in our opinion made it more suitable for a wider range of readers Only

the case of singular integral operators with continuous coefficients on a closed contour is considered herein The case of discontinuous coefficients and more general contours will be considered in the second volume We are grateful to the editor Professor G Heinig of the volume and to the translators Dr B Luderer and Dr S Roch and to G Lillack who did the typing of the manuscript for the work they have done on this volume
