Focussing particularly on the environmental impacts of human activities, the book explains the ways in which an understanding of basic physical principles can help us to use the environment and its resources. Three particular approaches are adopted throughout: a systems approach highlighting the interactions and interrelationships between the environment's diverse parts; an interdisciplinary perspective stepping back from individual subject focus to examine the complex breadth of the environment's diversity; a global perspective incorporating stimulating examples drawn from around the world to illustrate broad global patterns and contrasts. The Environment explains the principles and applications of the different parts of the Earth's system: the lithosphere, the atmosphere, the hydrosphere and explains the interrelationship across these systems. It explores the present environmental crisis, examines how the planet Earth fits into the wider universe and explores human environment interactions to offer a clear understanding of the diverse and complex environment we live in and new ways of thinking about the way it is changing.
