Our Changing Planet The FY 1998 US Global Change Research Program:

Accomplishments of the U.S. Global Change Research Program National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Division on Earth and Life Studies, Board on Environmental Change and Society, Board on Atmospheric Sciences and Climate, Committee to Advise the U.S. Global Change Research Program, 2017-03-13 The U S Global Change Research Program USGCRP is an interagency program established by the Global Change Research Act GCRA of 1990 mandated by Congress to assist the Nation and the world to understand assess predict and respond to human induced and natural processes of global change Since the USGCRP began scientific understanding of global change has increased and the information needs of the nation have changed dramatically A better understanding of what is changing and why can help decision makers in the public and private sectors cope with ongoing change Accomplishments of the U S Global Change Research Program highlights the growth of global change science in the quarter century that the USGCRP has been in existence and documents some of its contributions to that growth through its primary functions of interagency planning and coordination and of synthesis of research and practice to inform decision making *Our Changing Planet* Subcommittee on Global Change Research, Subcommittee on Global Climate

Research, 2014-07-16 The U S Global Change Research Program USGCRP stands at the threshold of a major transition Over the next several years in addition to continuing to improve our understanding of the Earth s environment and how it is changing the program will greatly advance our knowledge about the implications of such change for society The research successes of the last decade have laid the foundation for a global environmental change information service that will allow global change research results to be applied more effectively to national needs **Our Changing Planet** ,1999 **Our**

Ecosystems Research National Research Council, Oversight Group for the Ecosystems Panel, Ecosystems Panel, 2001-01-19 Research Council established the Ecosystems Panel in response to a request from the United States Global Change Research Program USGCRP The panel s charge included periodic reviews of the ecosystems aspects of the USGCRP and this is the first of those reviews It is based on information provided by the USGCRP including *Our Changing Planet* NSTC 1997 and earlier editions 1 ideas and conversations provided by participants in a workshop held in St Michaels Maryland in July 1998 and the deliberations of the panel In addition the panel reviewed the ecosystems chapter of the NRC report *Global Environmental*

Change Research Pathways for the Next Decade NRC 1999a known as the Pathways report The USGCRP is an interagency program established in 1989 and codified by the Global Change Research Act of 1990 PL 101 606 The USGCRP comprises representatives of the departments of Agriculture Commerce National Oceanic and Atmospheric Administration and National Institute of Standards and Technology Defense Energy Health and Human Services the National Institute of Environmental Health Sciences Interior and State as well as the Environmental Protection Agency the National Aeronautics and Space Administration the National Science Foundation the Smithsonian Institution the Office of Science and Technology Policy the Office of Management and Budget and the intelligence community NSTC 1997 The USGCRP s research program is described in detail in Our Changing Planet NSTC 1997 1999 In brief the program focuses on four major areas of earth system science 1 Seasonal to interannual climate variability 2 Climate change over decades to centuries 3 Changes in ozone ultraviolet UV radiation and atmospheric chemistry and 4 Changes in land cover and in terrestrial and aquatic ecosystems The fourth topic is the area in which advice was requested from the ecosystems panel The Ecosystems Panel s charge has three parts to provide a forum for the discussion of questions of ecosystem science of interest to scientists in and out of the federal agencies to periodically review the ecosystem aspects of the USGCRP s research program and to help identify general areas of ecosystem science that need additional attention especially areas that cut across ecosystems and levels of ecological organization In addressing the second item of its charge for this report the panel first identified the most significant and challenging areas in ecosystem science then used that identification as a basis to make recommendations to the USGCRP Thus this report is not a detailed review of the USGCRP s program but rather an attempt to identify those areas that the panel concludes are most in need of attention by a general research program on global change As noted in this report some of those areas are already receiving attention by the USGCRP Global Environmental Change Committee on Global Change Research, Policy Division, Policy and Global Affairs, National Research Council, 1999-09-28 How can we understand and rise to the environmental challenges of global change One clear answer is to understand the science of global change not solely in terms of the processes that control changes in climate and the composition of the atmosphere but in how ecosystems and human society interact with these changes In the last two decades of the twentieth century a number of such research efforts supported by computer and satellite technology have been launched Yet many opportunities for integration remain unexploited and many fundamental questions remain about the earth s capacity to support a growing human population This volume encourages a renewed commitment to understanding global change and sets a direction for research in the decade ahead Through case studies the book explores what can be learned from the lessons of the past 20 years and what are the outstanding scientific questions Highlights include Research imperatives and strategies for investigators in the areas of atmospheric chemistry climate ecosystem studies and human dimensions of global change The context of climate change including lessons to be gleaned from paleoclimatology Human responses to and forcing of projected global change This book

offers a comprehensive overview of global change research to date and provides a framework for answering urgent questions
