Our Common Seas Coasts In Crisis:

Our Common Seas Don Hinrichsen, 1990 In association with the International Institute for Environment and Development Our Common Seas Don Hinrichsen, 2016-07-22 Most of the world's population lives on or near the coasts. Every nation not completely landlocked has used the sea as its supposedly self-cleansing garbage dump. Now the effects are being felt. There is not a coast in the world which is not dangerously polluted. Sewage, oil, plastics, industrial effluents, radioactive waste have been added to uncontrolled development, all of which are busily destroying otherwise robust inshore eco-systems. Hinrichsen, basing his work on United Nations Environment Programme (UNEP) research and his own extensive travels, has described the situation in the Mediterranean, the Gulf, the Indian Ocean, the South East Asian Seas and the Eastern Pacific. He covers both the disasters and the growing successes in dealing with them and he points the way to the sort of international deal needed to rescue a vast resource in danger of complete destruction. His book is both a call to action and a sign of hope. Originally published in 1990. *Coastal Waters of the World* Don Hinrichsen, 2013-03-19 Nearly 60% of the world's population lives and works within 100 miles of a coast and even those who don't are connected to the world's oceans through an intricate drainage of rivers and streams. Ultimately the whole of humankind is coastal. *Coastal Waters of the World* is a comprehensive reference source on the state of the world's coastal areas. It focuses on the tremendous pressures facing coastal areas and the management systems and strategies needed to cope with them. Don Hinrichsen explores the origins and implications of three related issues: the overwhelming threats to our coastal resources and seas from population and pollution; the destruction of critical resources through unsustainable economic activity and the inability of governments to craft and implement rational coastal management plans. Introductory chapters present a concise summary of our coastal problems, including coastal habitat degradation and the fisheries crisis, along with a discussion of better management options. Three case studies of successful coastal governance focus on some of the problems and bring to life potential solutions. Following that are regional profiles that provide detailed information on the main population resource and management challenges facing each of the world's thirteen major coastal waters and seas. The profiles are presented in a standard format to allow for ease of comparison between regions and accessibility of information. The book ends with a realistic and practical agenda for action that can be implemented immediately. Safeguarding these complex interlinked ecosystems is humanity's most challenging management job. *Coastal Waters of the World* will help raise our awareness of coastal area concerns and provide a constructive contribution to the ongoing debate over how to manage these ever-changing areas both for ourselves and for future generations. It will serve as a valuable reference tool and an up-to-date resource for policymakers, management specialists and students interested in sustainable coastal governance.

Conservation Biology Peggy L. Fiedler, Peter M. Kareiva, 2013-06-29 Reflecting a new generation of conservation biologists, upper division and graduate level conservation biology courses as well as for individual reference, this book

incorporates a number of new authors and additional chapters covering all aspects of one of the most dynamic areas in the life sciences. Containing ten additional chapters it includes such timely topics as ecosystem management and the economics of conservation. Coastal Conservation and Management J. Pat Doody, 2012-12-06 *Coastal Conservation and Management* provides the reader with a synthesis of the range and variation of the main coastal formations and includes practical guidance on their management. The book discusses all the main coastal habitats of importance for nature conservation: saltmarsh, shingle, sand dune and seacliff, as well as combinations of these habitats, estuaries and other coastal wetlands. It offers a comprehensive picture of both the soft sedimentary formations and those which are more resilient. While these habitats have all been covered elsewhere in the literature, no single volume gives such a wide-ranging account. An attempt is made throughout to provide the reader with a basic understanding of the importance and range of variation of each habitat and coastal ecosystem. The principal issues are discussed and the key management options identified. Some prescriptive suggestions are made, though for the most part the reader is left to ponder the issues and their possible solutions. **Saving**

Our Planet Mostafa K. Tolba, 2012-12-06 *Saving Our Planet* analyses the changes both positive and negative that have occurred in the environment in the past two decades. It focuses not only on the state of the environment but also on the interactions between development activities and the environment. It highlights the main responses since 1972 to protect the environment. It is based on a wide-ranging review of the scientific literature, UNEP reports and other sources, and over 500 references are listed. *Global Environmental Institutions* Elizabeth R. DeSombre, 2017-02-10 *Global Environmental*

Institutions continues to provide the most accessible and succinct overview of the major global institutions attempting to protect the natural environment. Fully updated throughout to reflect the latest environmental issues, the second edition includes substantial new material on developments in international agreements and how institutional mechanisms have evolved in the past 10 years, including the creation of the new Sustainable Development Goals, the Minamata Convention on Mercury and the Paris Agreement on Climate Change. This second edition maintains the clear structure of the first edition, examining the underlying causes of global environmental problems, the creation of global environmental institutions, the effectiveness of action undertaken by these institutions. Providing an overview of the United Nations Environment Programme and the other entities within the UN that play important roles in global environmental governance, it also examines institutions clustered by issue area, introducing institutions that focus on protecting endangered species and biodiversity, govern the ocean environment, focusing on the atmosphere and regulate the transboundary movement of hazardous substances. Concluding with an updated chapter on emerging issues and future directions, drawing on the latest scholarship in the field and written by an acknowledged expert in the field, *Global Environmental Institutions* is essential reading for students of environmental politics and international organizations. *Global Transformations* David Held, 1999 In this book the authors set forth a new model of globalization that lays claims to supersede existing models and then use this

model to assess the way the processes of globalization have operated in different historic periods in respect to political organization military globalization trade finance corporate productivity migration culture and the environment Each of these topics is covered in a chapter which contrasts the contemporary nature of globalization with that of earlier epochs In mapping the shape and political consequences of globalization the authors concentrate on six states in advanced capitalist societies SIACS the United States the United Kingdom Sweden France Germany and Japan For comparative purposes other states particularly those with developing economics are referred to and discussed where relevant The book concludes by systematically describing and assessing contemporary globalization and appraising the implications of globalization for the sovereignty and autonomy of SIACS It also confronts directly the political fatalism that surrounds much discussion of globalization with a normative agenda that elaborates the possibilities for democratizing and civilizing the unfolding global transformation

Green Justice Thomas M Hoban, Richard O Brooks, 2018-02-20 In the nine years since Green Justice first appeared the field we have come to identify as environmental law has taken a number of twists and turns few of which were foreseen by the authors or so far as they know by anyone else Although this edition attempts to account for many of these changes it continues to emphasize what we believed then and continue to believe to be paramount not only for the study of environmental law but for common law based jurisprudence in general Despite the immediacy and crush of daily events closely reasoned analyses of the difficulties and conflicts arising from environmental conflicts as embodied in major cases or key decisions such as we present here provide a stabilizing core around which the swirl of daily events takes place and against which those events must be evaluated We believed then and believe even more strongly now that this is true not only for legal specialists and scholars but for an educated populace as well Thus this casebook

An Introduction to Global Environmental Issues Lewis A. Owen, Professor Kevin T Pickering, Kevin T. Pickering, 2006-03 An Introduction to Global Environmental Issues presents a comprehensive and stimulating introduction to the key environmental issues presently threatening our global environment Offering an authoritative introduction to the key topics a source of latest environmental information and an innovative stimulus for debate this is an essential book for all those studying or concerned with global environmental issues Major global environmental issues are brought into focus Explanations of the evolution of the earth's natural systems hydrosphere biosphere geosphere ecosphere provide an essential understanding of the scientific concepts processes and historical background to environmental issues Contemporary socio economic cultural and political considerations are explored and important conceptual approaches such as Gaian hypotheses and Chaos Theory are introduced Human impact and management of the natural environment and concerns for maintaining biodiversity are emphasised throughout Specific features include Case studies drawn from across the world Superb illustrations 4 colour plate sections a wealth of informative diagrams Glossary of key terms with key concepts highlighted throughout the text Annotated guides to further reading Chapter summaries and key points A Lecturers Manual is available to accompany the
