multi dimensional asymmetries of scale time and directions in the large dam controversy with a regional focus on Asia especially on India and China Whereas the concept of large scale transformation of fluvial environments into technological hydroscaapes originated in the West widespread construction of large dams started in the countries of the Global South in the period after decolonisation Construction and operation of large dams are amongst the most prestigious but also most sensitive development issues often accompanied by massive resistance of adversely affected people and civil society organisations Based on the notion of a contested politicised environment various case studies are analysed to identify the dominant narratives and imaginations that shape the large dams debate This volume largely contains contributions related to several subprojects from within the Cluster of Excellence Asia and Europe in a Global Context Shifting Asymmetries in Cultural Flows based at Heidelberg University with several expert contributions from external researchers

International Development Governance Ahmed Shafiqul Huque, Habib Zafarullah, 2017-09-25 The establishment of good governance is a major challenge for the developing world along with the need to sustain the progress resulting from developmental efforts Although there are numerous studies on the development and governance of emerging nations few volumes make a serious effort to bring together these two critical concepts *International Development Governance* combines the two concepts development and governance by examining the issues and problems faced by nations in their attempts to establish sustainable governance This textbook also initiates discussions on the concept of development governance in an international context The book fills the gap in existing literature by drawing upon the experience and expertise of scholars from a broad spectrum of knowledge Their views explain the issues and problems with reference to a number of tools that could establish development governance and sustain it The text offers in depth examinations of developmental sectors resulting in a textbook that will inspire future public officials policy makers and consultants to contribute to the betterment of life for citizens of developing countries

Water Resources and Agricultural Development in the Tropics Christopher J. Barrow, 2016-07-01 First published in 1988 There are many excellent texts on water supply and irrigation engineering irrigation economics agricultural development and the problems which often plague such efforts Few syntheses of such writings have been made

despite a clear need for them from people interested in water resources and agricultural development students of geography economics development studies and agricultural management administrators planners and aid agency staff This book attempts to provide a broad interdisciplinary introduction for such people *Command Area Development Programmes* M. Venkata Reddy,1998 This book presents a comprehensive account of problems and issues associates with command area development It is a longitudinal study where the same set of villages and households were studied at two points of time with a gap of eight years The main thrust of the study among other things is on on farm development water management agricultural extension and the locational advantages of a farm plot in ensuring timely and adequate supply of water Room for Manoeuvre Edward J. Clay,Bernard Schaffer,1984 Explores the roles of some of the organizations involved in the developing world and what might be done to increase their effectiveness Common instruments of intervention are illustrated with material from Bangladesh India Kenya Mauritius and Sri Lanka **Development and the Environmental Crisis** Michael Redclift,2010-11-26 First published in 1984 Michael Redclift s book makes the global environmental crisis a central concern of political economy and its structural causes a central concern of environmentalism Michael Redclift argues that a close analysis of the environmental crisis in the South reveals the importance of the share of resources obtained by different social groups The development strategies based on the experiences and interests of Western capitalist countries fail to recognise that environmental degradation in the South is a product of inequalities in both global and local economic relations and cannot be solved simply by applying solutions borrowed from environmentalism in the North The key to understanding the South s environmental problems lies in the recognition that structural processes markets technology state intervention are also a determining influence upon the way natural resources are used Through his review of Europe s Green Movement contemporary breakthroughs in biotechnology and information systems and recent feminist discourse Michael Redclift has enlarged the compass of the environmental debate and produced a book which should serve as a benchmark in future discussions of development and the environment It will be of importance to students in a range of disciplines within development studies geography ecology and the social sciences Green Development Bill Adams,2008-07-30 The third edition retains the clear and powerful argument of previous editions but has been updated to reflect advances in ideas and changes in international policy Greater attention has been given to political ecology environmental risk and the environmental impacts of development **Remote Sensing Techniques and GIS Applications in Earth and Environmental Studies** Santra, Abhisek,Mitra, Shreyashi Santra,2016-11-29 Emerging technologies have enhanced the various uses of geographic information systems This allows for more effective analysis of available data to optimize resources and promote sustainability Remote Sensing Techniques and GIS Applications in Earth and Environmental Studies is a critical reference source for the latest research on innovative methods for analyzing geographic data and utilizing sensor technologies for environmental monitoring Featuring extensive coverage across a range of relevant perspectives and topics

such as land use geospatial analysis image interpretation and site suitability analysis this book is ideally designed for engineers professionals practitioners upper level students and academics actively involved in the various areas of environmental sciences

Environmental Reconstruction in Headwater Areas Martin F. Bach,Josef Krecek,2012-12-06 These proceedings of a NATO Advanced Research Workshop on Environmental Reconstruction in Headwater Areas provide a landmark in the evolution of a distinctive movement perhaps an emerging new philosophy within the practice of headwater management The Headwater Control movement traces its history back to the First International Conference on Headwater Control Prague 1989 Throughout this brief history Headwater Control has remained a typical environment movement ad hoc At its meetings for every convert to the multidisciplinary integrative practical interventionist and above all green ideals of the group there have been several delegates who have found the whole concept both new and slightly incomprehensible One reason for this has been the Headwater Control practice of trying to bring together scientists practitioners policy makers and non government environmentalist organisations The group s larger meetings have always been federal gatherings Sponsorship has been shared with invited participation from associations representing hydrological science soil conservation erosion control forestry environmental activism and so forth These delegations may have included fellow travellers in the work to protect headwater environments but their main concerns have not necessarily coincided with the Headwater Control group s prescriptions for the environmental regeneration of headwater regions The Liberec Workshop whose proceedings are distilled into this volume provided a first opportunity for the scattered supporters of Headwater Control to talk among themselves and find out to what degree there really is a shared vision of the way forward in headwater management restoration and protection

Environmental Resources A.S. Mather,K. Chapman,2018-10-08 Environmental Resources provides a comprehensive text for undergraduate resource management courses It begins with an introduction to natural and environmental resources and then considers them in the context of politics time and space

Land, Water and Development Malcolm Newson,2008-09-17 Water is newsworthy there is or will be a world water crisis Aggravated by climate change we are approaching the limits of human exploitation of freshwater resources notably in growing essential food The complexities and uncertainties associated with improving our management of fresh water take the potential remedies out of the hands of simple local hard engineering and into much larger units the basin the ecosystem and the global context and also require longer term perspectives The Third Edition follows the same

structure as its predecessors presenting the historical and scientific backgrounds to land water interactions and establishing the links with development processes and policies Throughout its two major messages are that our new philosophy should be one of humans in the ecosystem and that the guidance from science being uncertain and contested must be operationalized in a participatory system of governance based on participation Following a review of progress towards these elements in the developed world the international case studies update the situation in the developing world following the Millennium Development Goals our new emphasis on poverty and on global food supplies This book covers the multitude of scientific research findings development of tools and spatial temporal scale challenges which have emerged in the last decade Tensions are highlighted in the current and future role of large dams country studies are retained and considerably updated and development contexts are explored in greater depth as a dividing line in capacity to cope with land and water stress Technical issues have been expanded to cover major droughts environmental flows and the restoration of rivers and wetlands A separate chapter picks up these themes under terms of their relationship with uncertainty and the widespread perception that a new ethos of adaptive management is needed in the water sector For students of geography environmental science hydrology and development studies this innovative edition provides a reasoned academic basis of evidence for sustainable adaptive management of rivers and related large scale ecosystems using more than 600 new sources It will also prove invaluable for lecturers and practitioners

Wasting the Rain (Routledge Revivals) William M. Adams

Adams,2014-05-01 First published in 1992 this title offers an experienced and constructive evaluation of the ways in which water resources have been developed in Africa Adams argues that the best hope of productive development lies in working and engaging with local people and using local knowledge of the environment effectively Modern large scale developments that have largely been ineffective are examined and emphasis is placed on the importance of using the skills and concerns of those affected such as small farmers to develop ingenious water projects an approach that can be applied worldwide This is an interesting and relevant title which will be of particular value to those with an interest in the developments in water resource conservation over the past two decades
