Rivers And Floodplains Forms Processes And Sedimentary Record:

Rivers and Floodplains John S. Bridge, 2009-04-01 *Rivers and Floodplains* is concerned with the origin geometry water flow sediment transport erosion and deposition associated with modern alluvial rivers and floodplains how they vary in time and space and how this information is used to interpret deposits of ancient rivers and floodplains There is specific reference to the types and lifestyles of organisms associated with fluvial environments human interactions with rivers and floodplains associated environmental and engineering concerns as well as the economic aspects of fluvial deposits particularly the modeling of fluvial hydrocarbon reservoirs and aquifers Methods of studying rivers and floodplains and their deposits are also discussed Although basic principles are emphasized many examples are detailed Particular emphasis is placed on how an understanding of the nature of modern rivers and floodplains is required before any problems concerning rivers and floodplains past or present can be addressed rationally *Rivers and Floodplains* is designed as a core text for senior undergraduate and graduate students studying modern or ancient fluvial environments particularly in earth sciences environmental sciences and physical geography but also in civil and agricultural engineering College teachers researchers and practising professionals will also find the book an invaluable reference Presents a process based approach which is relevant to modern curricula Discusses methods of studying rivers and floodplains and their deposits Provides many detailed examples throughout the text Emphasises the basic principles of this subject As the first synthesis of this entire field it will be a must have for all students studying modern or ancient fluvial environments Teachers researchers and practising professionals will find this an invaluable reference tool *Rivers and Floodplains* will also be of interest to geologists geographers and engineers

The Fly River, Papua New Guinea Barrie R. Bolton, 2009-01-09 In 1984 the OK Tedi Mining Company Limited began mining copper and gold mineralization from Mt Fubilan which is located at the headwaters of the OK Tedi Subsequent mining in the region followed in 1990 Since this time there has been intense monitoring of the environment undertaken by those in the field in order to better understand the possible impact of mining This book assembles and summarizes research spanning two decades undertaken by leading experts with firsthand experience Much of this research is contained in internal company reports giving the reader rare insight and firsthand knowledge Documents physical and biologic change in a large tropical river system brought about largely by mining in an otherwise pristine environment This book brings together a broad range of disciplines to provide a comprehensive overview of change in a complex and dynamical tropical river system based largely on previously unpublished company reports The book provides examples of state of the art strategies and methodologies for monitoring environmental impact in a large river system

Landforms Britannica Educational Publishing, 2011-05-01 The planet's natural dips and elevations slopes and structures stud the world's landscapes and enrich its panoramas However the Earth's landforms should not be viewed as anomalies in its topography rather they are often invaluable components of ecosystems and hold significant clues to the natural forces that

fashion our environment This comprehensive volume examines the various landforms from mountains to caves to glaciers that can be found across the globe The processes that shape each formation are also detailed within these pages

A Systems Approach for River and River Basin Restoration Theodore Endreny, 2021-05-27 Communities increasingly find that the water quality water levels or some other resource indicator in their river basins do not meet their expectations This discrepancy between the desired and actual state of the resource leads to efforts in river basin restoration River basins are complex systems and too often restoration efforts are ineffective due to a lack of understanding of the purpose of the system defined by the system structure and function The river basin structure includes stocks e g water level or quality inflows e g precipitation or fertilization outflows e g evaporation or runoff and positive and negative feedback loops with delays in responsiveness all of which function to change or stabilize the state of the system e g the stock of interest such as water level or quality External drivers on this structure together with goals and rules contribute to how a river basin functions This book reviews several new research projects to identify and rank the twelve most effective leverage points to address discrepancies between the desired and actual state of the river basin system This book demonstrates that river basin restoration is most likely to succeed when we change paradigms rather than try to change the system elements as the paradigm will establish the system goals structure rules delays and parameters

Joyce, 2013-02-15 Encapsulating two decades of research Polity and Ecology in Formative Period Coastal Oaxaca is the first major treatment of the lower Rio Verde region of Oaxaca investigating its social political and ecological history Tracing Formative period developments from the earliest known evidence of human presence to the collapse of Rio Viejo the region's first centralized polity the volume synthesizes the archaeological and paleoecological evidence from the valley This period saw the earliest agricultural settlements in the region as well as the origins of sedentism and social complexity and witnessed major changes in floodplain and coastal environments that expanded the productivity of subsistence resources The book addresses theoretically significant questions of broad relevance such as the origins and spread of agriculture the social negotiation of complex political formations the effects of long distance trade and interaction the macroregional effects of landscape change and prehispanic ideology and political power Focusing on questions of interregional interaction environmental change and political centralization Polity and Ecology in Formative Period Coastal Oaxaca provides a comprehensive understanding of the Formative period archaeology of this important and long neglected region of Oaxaca

Geomorphological Fieldwork, 2014-12-06 Geomorphological Fieldwork addresses a topic that always remains popular within the geosciences and environmental science More specifically the volume conveys a growing legacy of field based learning for young geomorphologists that can be used as a student book for field based university courses and postgraduate research requiring fieldwork or field schools The editors have much experience of field based learning within geomorphology and extend this to physical geography The topics covered are relevant to basic geomorphology as well as applied approaches

in environmental and cultural geomorphology The book integrates a physical human approach to geography but focuses on physical geography and geomorphology from an integrated field based geoscience perspective Addresses fluvial and karst landscapes in depth Focuses on field based learning as well as educational geomorphology Conveys experiential knowledge in international contexts Green Infrastructure and Climate Change Adaptation Futoshi Nakamura, 2022-01-25 This open access book introduces the function implementation and governance of green infrastructure in Japan and other countries where lands are geologically fragile and climatologically susceptible to climate change It proposes green infrastructure as an adaptation strategy for climate change and biodiversity conservation In the face of climate change dams levees and floodways built as disaster prevention facilities do not sufficiently function against extraordinary events such as mega floods and tsunami disasters To prevent those disasters and loss of biodiversity in various ecosystems we should shift from conventional hard measures to more adaptive strategies using various functions that natural and semi natural ecosystems provide Green infrastructure is an interconnected network of waterways wetlands woodlands wildlife habitats and other natural areas that support native species maintain natural ecological processes sustain air and water resources and contribute to the health and quality of life for communities and people Green infrastructure has mainly been discussed from adaptation strategy perspectives in cities and urban areas However to protect cities which are generally situated at downstream lower elevations we explore the preservation and restoration of forests at headwater basins and wetlands along rivers from a catchment perspective In addition the quantitative examination of flood risk biodiversity and social economic benefits described in this book brings new perspectives to the discussion The aim of this book is to accelerate the transformative changes from gray based adaptation strategies to green or hybrid based strategies to adapt to climate change The book provides essential information on the structure function and maintenance of green infrastructure for scientists university students government officers and practitioners *Fundamentals of Fluvial Geomorphology* Ro

Loughney, 2021-02-04 The principles of stratigraphic paleobiology can be readily applied to the nonmarine fossil record. Consistent spatial and temporal patterns of accommodation and sedimentation in sedimentary basins are an important control on stratigraphic architecture. Temperature and precipitation covary with elevation causing significant variation in community composition and changes in base level cause elevation to undergo predictable changes. These principles lead to eight sets of hypotheses about the nonmarine fossil record. Three relate to long term and cyclical patterns in the preservation of major fossil groups and their taphonomy as well as the occurrence of fossil concentrations. The remaining hypotheses relate to the widespread occurrence of elevation correlated gradients in community composition long term and cyclical trends in these communities and the stratigraphic position of abrupt changes in community composition. Testing of these hypotheses makes the stratigraphic paleobiology of nonmarine systems a promising area of investigation. [Encyclopedia of Quaternary Science](#) Cary Mock, 2013-03-25 The second revised edition of the *Encyclopedia of Quaternary Science* Four Volume Set provides both students and professionals with an up to date reference work on this important and highly varied area of research. There are lots of new articles and many of the articles that appeared in the first edition have been updated to reflect advances in knowledge since 2006 when the original articles were written. The second edition will contain about 375 articles written by leading experts around the world. This major reference work is richly illustrated with more than 3 000 illustrations most of them in colour. Research in the Quaternary sciences has advanced greatly in the last 10 years especially since topics like global climate change geologic hazards and soil erosion were put high on the political agenda. This second edition builds upon its award winning predecessor to provide the reader assured quality along with essential updated coverage. Contains 357 broad ranging articles 4310 pages written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field. Facilitates teaching and learning. The first edition was regarded by many

as the most significant single overview of Quaternary science ever yet Editor in Chief Scott Elias has managed to surpass that in this second edition by securing even more expert reviews whilst retaining his renowned editorial consistency that enables readers to navigate seamlessly from one unfamiliar topic to the next
