The Handbook of Fatigue Management in Transportation Christina M. Rudin-Brown, Ashleigh J. Filtiness, 2023-08-02

In the world of transportation fatigue is a silent killer that can affect us all. Understanding fatigue including how to manage it to minimize safety risk is of great importance. However while it is one thing to recognize that fatigue is a critical safety issue it is quite another to set up a successful scientifically informed fatigue risk management programme. This book is here to help. It has been carefully designed as a comprehensive reference point bringing together international expertise from leaders in fatigue science and showcasing valuable insights from transportation industry practitioners. The 40 authored chapters are divided into six sections to better understand fatigue science, the consequences of fatigue in transportation, contributors to fatigue, managing fatigue and promoting alertness, real world case studies of fatigue management in practice and future perspectives. While it is possible to read each chapter in isolation most will be gained by reading the book as a whole. Each chapter starts with an abstract overview and concludes with summary bullet points creating a handy quick check for key points. This accessible text is for those who are interested in supporting alert and safe transportation operations. It is suitable for professionals, transport managers, government advisors, policy makers, students, academics and anyone who wants to learn more. All transport modes, road, rail, maritime and aviation are considered. For anyone waking up to the complex challenge of fatigue management this handbook is a must.

Driver Behaviour and Training Lisa Dorn, 2017-07-12

This title was first published in 2003. Research on driver behaviour over the past two decades has demonstrated that driver characteristics, goals and motivations are important determinants of driving behaviour. We are now in a position to apply this knowledge to driver training programs and evaluate their effectiveness in improving safety. The main objective for the First International Conference on Driver Behaviour and Training and this book is to describe and

discuss recent advances in this field The book bridges the gap between practitioners in road safety and theoreticians investigating driving behaviour from a number of different perspectives and related disciplines It will encourage research in driver training to combat erroneous or deviant driving behaviour and or reduce the effects of human error at source This book will be of interest to road safety researchers and road safety practitioners in the private and public sector

Designing Interaction and Interfaces for Automated Vehicles Neville Stanton, Kirsten M. A. Revell, Patrick Langdon, 2021-03-10 Driving automation and autonomy are already upon us and the problems that were predicted twenty years ago are beginning to appear These problems include shortfalls in expected benefits equipment unreliability driver skill fade and error inducing equipment designs Designing Interaction and Interfaces for Automated Vehicles User Centred

Ecological Design and Testing investigates the difficult problem of how to interface drivers with automated vehicles by offering an inclusive human centred design process that focusses on human variability and capability in interaction with interfaces This book introduces a novel method that combines both systems thinking and inclusive user centred design It models driver interaction provides design specifications concept designs and the results of studies in simulators on the test track and in road going vehicles This book is for designers of systems interfaces interactions UX Human Factors and Ergonomics researchers and practitioners involved with systems engineering and automotive academics _ In this book Prof Stanton and colleagues show how Human Factors methods can be applied to the tricky problem of interfacing human drivers with vehicle automation They have developed an approach to designing the human automation interaction for the handovers between the driver and the vehicle This approach has been tested in driving simulators and most interestingly in real vehicles on British motorways The approach called User Centred Ecological Interface Design has been validated against driver behaviour and used to support their ongoing work on vehicle automation I highly recommend this book for anyone interested or involved in designing human automation interaction in vehicles and beyond Professor Michael A Regan University of NSW Sydney AUSTRALIA

Vehicle Feedback and Driver Situation Awareness Guy H. Walker, Neville A. Stanton, Paul M. Salmon, 2018-04-17 A potentially troubling aspect of modern vehicle design some would argue is a trend for isolating the driver and reducing vehicle feedback usually in the name of comfort and refinement but increasingly because of automation There is little doubt cars have become more civilised over the years yet despite this the consequences of driver behaviour remain to a large extent anecdotal Readers will have heard such anecdotes for themselves They usually take the form of drivers of a certain age recalling their first cars from the 1970s or

80s in which doing 70 mph really felt like it The question is whether such anecdotes actually reflect a bigger more significant issue that could be better understood Related questions have been explored in other domains such as aviation where the change to fly by wire did indeed bring about some occasionally serious performance issues that were not anticipated Despite some clear parallels automotive systems have been left relatively unstudied The research described in this book aims to explore precisely these issues from a Human Factors perspective This means connecting the topics of vehicle feel vehicle dynamics and automotive engineering with the latest research on driver situation awareness The problem is explored experimentally from a variety of theoretical viewpoints but the outcomes are consistently practical Here we have a promising new avenue along which the driver experience can be enhanced in novel and insightful ways Tools and templates are provided so that engineers and designers can try different ways to boost vehicle safety efficiency and enjoyment from a human centered perspective Association of American Publishers AAP Finalist for the 2019 PROSE Award Features Diagnosis of how vehicle feel impacts driver situation awareness and how this could aid future vehicle designs Multi theory approach to driver situation awareness and how different views of this important concept give rise to different insights Comprehensive analysis of situation awareness in driving the information requirements of drivers and how these needs can be supported Practical descriptions of how state of science Human Factors methods have been applied in practice *A Subject Bibliography from Highway Safety Literature* United States.
