Roadside Revegetation David E. Steinfeld, 2007 Native plants are a foundation of ecological function affecting soil conservation wildlife habitat plant communities invasive species and water quality Establishing locally adapted self sustaining plant communities can also support transportation goals for safety and efficiency Past obstacles to establishing native plant communities on roadsides have been technical informational and organizational Effective strategies and practical techniques for revegetating the disturbed conditions with limited resources must be made available to practitioners Multiple disciplines ranging from engineering to soil science ecology botany and wildlife science must be able to work cooperatively not in isolation This report offers an integrated approach to facilitate the successful establishment of native plants along roadsides and other areas of disturbance associated with road modifications It guides readers through a comprehensive process of 1 initiating 2 planning 3 implementing and 4 monitoring a roadside revegetating project with native plants

Roadside Naturalization and Texas Highway 190 John Mark Scott, 2007 There is much dialog concerning the use of native plants in the roadside environment From the Highway Beautification of Lady Bird Johnson in the 1960 s to the environmental issues of today designers are focused on ways to incorporate native plant material in the roadside Through qualitative analysis this thesis explores best practices for the use of native plant material in the roadside as compared with a unique roadside design in North Texas In 2003 The North Texas Tollway Authority NTTA began design for the Texas Highway 190 Tollway A new direction for roadside enhancement using native and adapted plant material was created by the Board of Directors of the NTTA and a design team from the engineering and planning company HNTB Borrowing from the Blackland Prairies of North Texas the designers stylized a design concept using native and adapted plant material to create regimented landscape planting beds throughout the 29 miles of roadway Considered the largest landscape project using native plant material in the State the design team utilized accepted criteria for the use of native plant material and developed new criteria during the design process

Wildflowers and Plant Communities of the Southern Appalachian Mountains and Piedmont Timothy P. Spira, 2011-05-16 This richly illustrated field guide serves as an introduction to the wildflowers and plant communities of the southern Appalachians and the rolling hills of the adjoining piedmont Rather than organizing plants including trees shrubs and herbaceous plants by flower color or family characteristics as is done in most guidebooks botanist Tim Spira takes a holistic ecological approach that enables the reader

to identify and learn about plants in their natural communities This approach says Spira better reflects the natural world as plants like other organisms don't live in isolation they coexist and interact in myriad ways Full color photo keys allow the reader to rapidly preview plants found within each of the 21 major plant communities described and the illustrated species description for each of the 340 featured plants includes fascinating information about the ecology and natural history of each plant in its larger environment With this new format readers can see how the mountain and piedmont landscapes form a mosaic of plant communities that harbor particular groups of plants The volume also includes a glossary illustrations of plant structures and descriptions of sites to visit Whether you're a beginning naturalist or an expert botanist this guidebook is a useful companion on field excursions and wildflower walks as well as a valuable reference Southern Gateways Guide is a registered trademark of the University of North Carolina Press **Public Roads**, 2010 **Handbook of Road Ecology** Rodney van der Ree, Daniel J. Smith, Clara Grilo, 2015-04-02 Winner of the IENE Project Award 2016 This authoritative volume brings together some of the world's leading researchers academics practitioners and transportation agency personnel to present the current status of the ecological sustainability of the linear infrastructure primarily road rail and utility easements that dissect and fragment landscapes globally It outlines the potential impacts demonstrates how this infrastructure is being improved and how broad ecological principles are applied to mitigate the impact of road networks on wildlife Research and monitoring is an important aspect of road ecology encompassing all phases of a transportation project This book covers research and monitoring to span the entire project continuum starting with planning and design through construction and into maintenance and management It focuses on impacts and solutions for species groups and specific regions with particular emphasis on the unique challenges facing Asia South America and Africa Other key features Contributions from authors originating from over 25 countries including from all continents Each chapter summarizes important lessons and includes lists of further reading and thoroughly up to date references Highlights principles that address key points relevant to all phases in all road projects Explains best practices based on a number of successful international case studies Chapters are stand alone but they also build upon and complement each other extensive cross referencing directs the reader to relevant material elsewhere in the book Handbook of Road Ecology offers a comprehensive summary of approximately 30 years of global efforts to quantify the impacts of roads and traffic and implement effective mitigation As such it is essential reading for those involved in the planning design assessment and construction of new roads the management and maintenance of existing roads and the modifying or retrofitting of existing roads and problem locations This handbook is an accessible resource for both developed and developing countries including government transportation agencies Government environmental conservation agencies NGOs and road funding and donor organisations *Guidelines for Vegetation Management*, 2011 Publication code GVM 1 P 4 of cover **The Midwestern Native Garden** Charlotte Adelman, Bernard L. Schwartz, 2011-09-21 Midwestern gardeners and landscapers are becoming increasingly attracted to

noninvasive regional native wildflowers and plants over popular nonnative species The Midwestern Native Garden offers viable alternatives to both amateurs and professionals whether they are considering adding a few native plants or intending to go native all the way Native plants improve air and water quality reduce use of pesticides and provide vital food and reproductive sites to birds and butterflies that nonnative plants cannot offer helping bring back a healthy ecosystem The authors provide a comprehensive selection of native alternatives that look similar or even identical to a range of nonnative ornamentals These are native plants that are suitable for all garden styles bloom during the same season and have the same cultivation requirements as their nonnative counterparts Plant entries are accompanied by nature notes setting out the specific birds and butterflies the native plants attract The Midwestern Native Garden will be a welcome guide to gardeners whose styles range from formal to naturalistic but who want to create an authentic sense of place with regional natives The beauty hardiness and easy maintenance of native Midwestern plants will soon make them the new favorites Rangeland
