## **Seeing Spatial Form:**

Seeing Spatial Form Michael R. M. Jenkin, Laurence R. Harris, 2005-10-27 The world is divided into objects things that are distinct from their backgrounds and that can move or be moved Objects are food and prey and threats as well as neutral items and it is critical to be able to see them How the form of an object is distinguished is one of the most basic yet least understood topics of research in vision perception The object defining system needs to operate in the real world where objects and viewers move and where the scene is cluttered rarely offering a clear unobscured view of any object How are we able to see and define objects using the complex pattern of light falling on the retina An object becomes visible if it differs sufficiently from its surroundings in its luminance color texture motion or depth Although the processes that use these different cues are quite distinct research has shown that they share some organizational principles This book *Seeing Spatial Form* is dedicated to David Martin Regan who has made so many contributions to our understanding of how we see objects Its chapters bring together ideas from some of the world s leading researchers in form vision to explain what we know about distinguishing form The book includes a CD ROM which contains additional demonstrations and color images that considerably enhance the chapter contents *Seeing Spatial Form* will be an invaluable resource for student and professional researchers in vision science cognitive psychology and neuroscience

*Seeing More* Samantha Matherne, Gardner Cowles Associate Professor of the Humanities Samantha Matherne, 2024-07-19 There is a long standing tradition in philosophy that defines imagination as engaging with things that are not real or present as a kind of fantasy Immanuel Kant offered an original theory of imagination as something that shapes our encounters with what is real present and pervades our lives This book brings this theory of imagining to light The

Oxford Handbook of Synesthesia Julia Simner, Edward M. Hubbard, 2018-10-23 Synesthesia is a fascinating phenomenon which has captured the imagination of scientists and artists alike This title brings together a broad body of knowledge about this condition into one definitive state of the art handbook

**Laws of Seeing** Wolfgang Metzger, 2009-08-21 The first English translation of a classic work in vision science from 1936 by a leading figure in the Gestalt movement covering topics that continue to be major issues in vision research today This classic work in vision science written by a leading figure in Germany's Gestalt movement in psychology and first published in 1936 addresses topics that remain of major interest to vision researchers today Wolfgang Metzger's main argument drawn from Gestalt theory is that the objects we perceive in visual experience are not the objects themselves but perceptual effigies of those objects constructed by our brain according to natural rules Gestalt concepts are currently being increasingly integrated into mainstream neuroscience by researchers proposing network processing beyond the classical receptive field Metzger's discussion of such topics as ambiguous figures hidden forms camouflage shadows and depth and three dimensional representations in paintings will interest anyone working in the field of vision and perception including psychologists biologists neurophysiologists and researchers in computational vision and artists designers and philosophers Each chapter is accompanied by compelling visual demonstrations of the phenomena described the book includes 194 illustrations drawn from visual science art and everyday experience that invite readers to verify Metzger's observations for themselves Today's researchers may find themselves pondering the intriguing question of what effect Metzger's theories might have had on vision research if Laws of Seeing and its treasure trove of perceptual observations had been available to the English speaking world at the time of its writing

*Space, Place and Gender* Doreen Massey, 2013-06-10 This new book brings together Doreen Massey's key writings on three areas central to a range of disciplines In addition the author reflects on the development of these ideas and outlines her current position on these important issues The book is organized around the three themes of space place and gender It traces the development of ideas about the social nature of space and place and the relation of both to issues of gender and debates within feminism It is debates in these areas which have been crucial in bringing geography to the centre of social sciences thinking in recent years and this book includes writings that have been fundamental to that process Beginning with the economy and social structures of production it develops a wider notion of spatiality as the product of intersecting social relations In turn this has led to conceptions of place as essentially open and hybrid always provisional and contested These themes intersect with much current thinking about identity within both feminism and cultural studies Each of the themes is preceded by a section which reflects on the development of ideas and sets out the context of their production The introduction assesses the current state of play and argues for the close relationship of new thinking on each of these themes This book will be of interest to students in geography social theory women's studies and cultural studies

Re-viewing Space Rosario Caballero, 2006 Annotation Re-viewing Space Figurative Language in Architects Assessment of Built Space draws attention to the structure of mind as

shown by the pervasiveness of figurative language in all kinds of discourse It integrates insights from cognitive theory with discourse analytic procedures in order to explore the role of metaphor in real communication Bearing in mind that an understanding of the relationship between conceptual schemas and linguistic expressions cannot be effected without considering the cultural contexts in which metaphors occur this book is concerned with exploring the kind of metaphors used by architects for assessing design solutions in building reviews Jacket The Mathematical Structure of Stable Physical Systems Dr. Martin Concoyle,G.P. Coatmundi,2014-01-16 This book is an introduction to the simple math patterns used to describe fundamental stable spectral orbital physical systems represented as discrete hyperbolic shapes the containment set has many dimensions and these dimensions possess macroscopic geometric properties which are also discrete hyperbolic shapes Thus it is a description which transcends the idea of materialism ie it is higher dimensional and it can also be used to model a life form as a unified high dimension geometric construct which generates its own energy and which has a natural structure for memory where this construct is made in relation to the main property of the description being in fact the spectral properties of both material systems and of the metric spaces which contain the material systems where material is simply a lower dimension metric space and where both material components and metric spaces are in resonance with the containing space Partial differential equations are defined on the many metric spaces of this description but their main function is to act on either the usually unimportant free material components to most often cause non linear dynamics or to perturb the orbits of the quite often condensed material trapped by or within the stable orbits of a very stable hyperbolic metric space shape Re-Imagining Public Space D. Boros,J. Glass,2014-12-09 Public space both literally and figuratively is foundationally important to political life From Socratic lectures in the public forum to Occupy Wall Street and the Arab Spring public spaces have long played host to political discussion and protest The book provides a direct assessment of the role that public space plays in political life
