## **Seizures Medical Causes And Management:**

*Seizures* Norman Delanty, 2001-11-27 Seizures are frightening events They frighten the patients who experience them they frighten those who witness them they also frighten many physicians who have to deal with them Most individuals with seizures present to family physicians or to emergency room physicians However despite the fact that seizures are among the most common neurological conditions most general practitioners family practice specialists and internists do not see large numbers of patients with seizures Given the apoplectic appearance of generalized tonic clonic convulsions it is not difficult to understand why they arouse such emotional responses in those that experience them those that witness them and those whose care is sought for them Seizures are symptoms of something wrong with the brain Many different kinds of perturbations in brain anatomy chemistry or physiology can produce seizures For many individuals seizures occur in the context of an acute illness and will not recur once that illness is treated These individuals do not have epilepsy They have transient disturbances in brain function attributable to systemic medical conditions It is important to recognize these issues because first the seizure may be the initial or even only manifestation of the underlying medical problem and this needs to be recognized *Hospital Medicine* Robert M.
