**Macromolecules** Hans-Georg Elias, 2013-06-29 Like so many of its kind this textbook originated from the requirements of teaching While lecturing on macromolecular science as a required subject for chemists and materials scientists on the undergraduate graduate and postgraduate levels at Swiss Federal Institute of Technology at Zurich 1960 1971 I needed a one volume textbook which treated the whole field of macromolecular science from its chemistry and physics to its applications in a not too elementary manner This textbook thus intends to bridge the gap between the often oversimplified introductory books and the highly specialized texts and monographs that cover only parts of macromolecular science This first English edition is based on the third German edition 1975 which is about 40% different from the first German edition 1971 a result of rapid progress in macromolecular science and the less rapid education of the writer This text intends to survey the whole field of macromolecular science Its organization results from the following considerations The chemical structure of macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of macro molecules Properties depend on structure Solution properties are thus discussed in

Part II solid state properties in Part III There are other reasons for discussing properties before syntheses For example it is difficult to understand equilibrium polymerization without knowledge of solution thermodynamics of the glass temperature etc

**Macromolecules** Hans-Georg Elias, 2005-10-28 Macromolecules provides a broad survey of the entire subject integrated representations of chemistry physics and technology precise descriptions and definitions of basic phenomena and balanced treatments of facts and theory The book series thus intends to bridge the gap between introductory textbooks and the highly specialized texts and monographs that cover only part of polymer science and technology Volume I is concerned with the fundamentals of chemical structure and principles of synthesis of macromolecules constitution configuration conformation polymerization equilibria polymerization mechanisms ionic coordination free radical step reactions including solid state and biochemical polymerizations polymer reactions and strategies for defined polymer architectures Volume II discusses individual polymers and their industrial syntheses Volume III the fundamentals of physical structures and properties and Volume IV the processing and application of polymers as plastics fibers elastomers thickeners etc The world of macromolecules in a nutshell

Handbook of Ring-Opening Polymerization Philippe Dubois, Olivier Coulembier, Jean-Marie Raquez, 2009-03-02 This comprehensive truly one stop reference discusses monomers methods stereochemistry industrial applications and more Chapters written by internationally acclaimed experts in their respective fields cover both basic principles and up to date information ranging from the controlled ring opening polymerization methods to polymer materials of industrial interest All main classes of monomers including heterocyclics cyclic olefins and alkynes and cycloalkanes are discussed separately as well as their specificities regarding the ring opening polymerization techniques the mechanisms the degree of control the properties of the related polymers and their applications The two last chapters are devoted to the implementation of green chemistry in ring opening polymerization processes Of much interest to chemists in academia and industry

**FUNDAMENTALS OF CHEMISTRY - Volume II** Sergio Carrà, 2009-05-05 Fundamentals of Chemistry theme in two volumes is a component of Encyclopedia of Chemical Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias The Theme is organized into six different topics which represent the main scientific areas History and Fundamentals of Chemistry Chemical Experimentation and Instrumentation Theoretical Approach to Chemistry Chemical Thermodynamics Rates of Chemical Reactions Chemical Synthesis of Substances These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

**Expert Level of Dental Resins - Material Science & Technology** Ralf Janda, 2022-09-12 Resin materials are broadly used in dentistry for almost all indications and they will gain even more importance in the future Especially the increasing performance and efficiency of the CAD CAM technology and 3D printing open possibilities to use resins which were not used up to now in dentistry Besides dentists dental students or dental

technicians there are many other specialists such as researchers material scientists industrial developers or experts of adjoining professional disciplines who are technically engaged in dental resins The Expert Level is the third book of the series Dental Resins Material Science Technology The Expert Level includes all information and data presented in the Basic Level and Advanced Level of this series but enormously expands the knowledge base From a total database of 8 198 references 1 707 were selected and used for this textbook It comprises more than 1 000 manuscript pages 384 figures and 124 tables The Expert Level describes very accurately and comprehensively all details of the material science and technology of dental polymers and composites Furthermore their production methods and applications are discussed in detail Therefore this book is a unique treatise of the complete present knowledge about dental resins and dental resin composites This includes the discussion of the raw starting materials together with the explanation and presentation of their chemical structures and properties their CAS Numbers and the names of the manufacturers amounts of the raw starting materials usually used to formulate the finished products important material and toxicological properties of the starting materials and the finished products detailed description of the production processes of essential starting materials such as the syntheses of essential monomers the silanization of inorganic fillers or the manufacturing of unfilled and filled splinter polymers detailed description of the formulation and the properties of the finished products Furthermore for many commercial endproducts rather detailed formulations as well as the exact production processes are described All ISO standards that are relevant for dental resins are listed too Furthermore many essential methods to test the mechanical chemical and toxicological properties are also presented and explained The Expert Level enables every scientist with a good chemical knowledge not only to understand how dental polymers function but also to develop new and improved products
