Macrophage-mediated Antibody-dependent Cellular Cytotoxicity Hillel S. Koren, 1983 Macrophages & Cancer Gloria H. Heppner, Amy M. Fulton, 2019-06-04 First Published in 1988 this book offers a full comprehensive guide into the relationship between macrophages and Cancer Carefully compiled and filled with a vast repertoire of notes and references this book serves as a useful reference for Students of Medicine Oncology and other practitioners in their respective fields

Cumulated Index Medicus, 1976 **Cancer Immunology: Innovative Approaches to Therapy** Ronald B. Herberman, 2012-12-06 This volume is the second in the Cancer Treatment and Research series focussing on basic and clinical tumor immunology It has a rather different focus or emphasis from that of the first volume published two years ago That work Basic and Clinical Tumor Immunology R B Herberman ed Martinus Nijhoff Publishers 1983 devoted considerable attention to up dated summaries in various areas of classical tumor immunology specific antitumor immunity the immunologic competence of cancer patients characterization of human tumor associated antigens the ability to propagate specifically immune T cells in culture in the presence of interleukin 2 and the use of such cells for adoptive immunotherapy of established tumors of evidence concerning the immune surveillance hypothesis and pointed out the need to consider non T cell mediated mechanisms of host resistance In particular one chapter summarized information on the role of macrophages in host resistance against tumors The present volume continues to emphasize one of the major themes of the first volume innovative approaches to the therapy of cancer It involves contributions from leading investigators on several primary types of therapeutic interventions related to monoclonal antibodies the collaboration of monoclonal antibodies with macrophages to mediate antibody dependent cellular cytotoxicity lymphokines tumor vaccines and natural killer cells It also has an up to date summary of the immunologic aspects of the exciting and promising work being performed on human T cell leukemia virus in the laboratory of Dr Robert Gallo Mechanisms of Invasion and Metastasis Marc M. Mareel, Patrick De Baetselier, Frans M. Van Roy, 1991-04-23 This book covers important biological immunological and molecular information essential for understanding the rationale and results of experiments and clinical observations on cell cell and cell substrate adhesion hydrolytic activities cell motility immunological and other host elements of the host tumor ecosystem at different sites of the metastatic process genetic and epigenetic elements of the acquisition and the expression of invasive phenotypes 38 tables and 60 computer drawn figures provide comprehensive overviews and a methodological chapter emphasizing the differences and similarities between assays and their relevance for natural situations has also been included Clinical and experimental cancer researchers as well as post graduate students interested in cancer research will find this book to be an indispensable reference resource Disorders of the Monocyte Macrophage System F. Schmalz, D. Huhn, H. E. Schaefer, 2012-12-06 The origin and function of normal monocytes and macrophages have been clearly defined by extensive investigations in human and in animal models The central importance

of this cell system for the biological defense mechanisms is well established phagocytosis inactivation and destruction of organic and inorganic materials an important role in the initiation of humoral and cell mediated immunological responses and the secretion of a variety of chemical mediator and effector substances are the most important features of this ontogenetically ancient cell system However the data on this cellular system are rather recent and this may explain why relatively little attention has been paid to the pathology of the monocyte macrophage system MMS until now In addition this monograph should focus attention on the secondary pathological implications of the MMS in disorders not primarily originating from this system Several techniques are available to identify even abnormal individuals of this cell system and therefore can be employed for the study of severely altered or neoplastic monocytic cells

Novel Agents for Multiple Myeloma Claudio Cerchione, Hans C. Lee, Giovanni Martinelli, María-Victoria Mateos, Kenneth Anderson, 2024-05-07 Multiple myeloma MM is a malignant neoplasm of plasma cells that accumulate in bone marrow leading to bone destruction and marrow failure It accounts for approximately 1-8% of all hematologic and solid cancers and slightly 15% of hematologic malignancies in the United States MM is typically sensitive to different classes of cytotoxic drugs both as frontline treatment and as treatment for relapsed disease Unfortunately even if responses are typically durable nowadays MM is not considered curable with current approaches However MM survival rates have been brilliantly improved thanks to the introduction of novel agents patients diagnosed after 2010 have had higher rates of novel therapy use and better survival outcomes compared with those of earlier years Most relevant therapeutic advances over the past decades has been the introduction of novel therapies such as immune modifying agents thalidomide and lenalidomide and proteasome inhibitors bortezomib adopted with or without stem cell transplantation

Nahmias, Richard J. O'Reilly, 2012-12-06

When we were first approached by the senior editors of this series to edit a book on interactions between the host and infectious agents we accepted this offer as an exciting challenge. The only condition readily agreed upon was that such a book should focus on the immunology of infections in humans. Our reasons if not biases were severalfold. We sensed that the fields of microbiology and immunology which had diverged as each was focusing on its individual search were coming together. In agreement with the opinions expressed by Dr Richard Krause in the Introduction we strongly believed that the development of the immune system evolved in response to infectious agents and that the evolution of these agents was influenced in turn by the character of the host's responses. An intensive examination of the multitude of primitive or more recently developed host defense mechanisms to determine their relative contribution to man's resistance to a given infectious agent appeared to us to be of crucial basic and practical interest. Many immune mechanisms studied in animals were being explored in humans and it appeared timely to focus particularly on what was known about man's resistance to infectious agents correlating this information with lessons learned from relevant experiments in animal models.

This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial RE Society and biomedical scientists in general who are interested in the intricate system of cells and molecular moieties derived from these cells which constitute the RES. It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular system. Nevertheless because of historical developments and current interest in the subject by investigators from many diverse areas it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology, biochemistry, phylogeny and ontogeny, physiology and pharmacology as well as clinical areas including immunopathology, cancer, infectious diseases, allergy and hypersensitivity. It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines. Diagnostic, Prognostic and Predictive Factors of Response in the Era of Precision Oncology in Breast Cancer Francesco Schettini, Daniele Generali, 2023-12-12

In the last couple of decades the study of the cancer genome and the progressive implementation of next generation sequencing platforms have

provided the Scientific and Oncology communities with a multitude of data technologies diagnostic prognostic and predictive tools that have been revolutionizing the way we can study diagnose and treat cancer including breast tumors For example genomic tests can now refine the prognosis of early stage breast cancer patients beyond standard clinicopathological features and help guide escalated or de escalated treatment choices The identification of the molecular intrinsic subtypes might also be helpful in guiding treatment choices in advanced hormone receptor positive disease The identification of germline mutations in BRCA1 or BRCA2 has led to the development and introduction of PARP inhibitors for the treatment of advanced and early stage breast cancer along with personalized follow up and prophylactic surgical procedures for patients with or without cancer carrying such mutations
