Staff, 1996 So successful it had to be reprinted in its first edition here is a perfect guide for the more than 49 million people who will visit one of the 31 national parks in the western U S this year Each chapter is checked by a national park ranger for accuracy This third edition features a new 16 page chapter on Mesa Verde National Park *The Publishers Weekly*, 1915 **Guide to Wildlife Feeding Injuries on Conifers in the Pacific Northwest** William Hobart Lawrence, 1996 [Animal Tracks of Southern California](#) Chris Stall, 1990 Info on 40 50 animals common to each region **Textbook of Botany** Charles Elmer Allen, Edward Martinus Gilbert, 1917 Excerpt from Textbook of Botany There are such wide differences of opinion regarding the proper content of an elementary course in botany that no teacher would venture to put forth a particular selection of facts and principles as the only one wisely to be made from the great body of knowledge concerning plants The present writers are quite uninclined to adopt such an attitude toward their own choice still less would they insist upon the precise order in which the materials they have selected should be presented We are convinced however that an introductory course can best be centered about a fairly intensive study of a small number of plants and that an attempt at a more desultory treatment of the subject must prove unsatisfactory The plants used as types should be easily available and so far as possible they should be selected from among those that already have definite meanings to the pupil either because of their familiarity or because of their utility In addition the predominance and the practical significance of the seed plants may be recognized by devoting some time to a study of their divers forms and uses and in this study too illustrations should be drawn chiefly from those plants of which the pupil sees or hears most in his everyday life At whatever point in the course this latter work is done it should have been preceded by an intensive study of the life of at least one particular seed plant The present book

offers a sufficient amount of work for a year's course. Probably all teachers will agree that a secondary school course in botany should not occupy less time than this although unfortunately the ideal is often impossible of attainment. The order of presentation here adopted is that which will probably in general be most satisfactory in schools that begin the study of botany in the fall.

New York City Trees, 2002. This pocket sized gem is dedicated to the idea that every species of tree has a story and every individual tree has a history. Includes stories of New York City's trees complete with photos, tree silhouettes and leaf and fruit morphologies.

Eastern Pennsylvania All-Outdoors Atlas & Field Guide Sportsman's Connection, 2013-09-01. Sportsman's Connection's Eastern Pennsylvania All-Outdoors Atlas Field Guide contains maps created at twice the scale of other road atlases which means double the detail. And while the maps are sure to be the finest quality you have ever used, the thing that makes this book unique is all the additional information. Your favorite outdoor activities including fishing, lakes and streams, hunting, camping, hiking and biking, snowmobiling and off-roading, paddling, skiing, golfing and wildlife viewing are covered in great depth with helpful editorial and extensive tables which are all cross-referenced and indexed to the map pages in a way that's fun and easy to use.

Landscape Ethnobiology Leslie Main Johnson, Eugene S. Hunn, 2012. Although anthropologists and cultural geographers have explored place in various senses, little cross-cultural examination of kinds of place or ecotopes has been presented from an ethno-ecological perspective. In this volume, indigenous and local understandings of landscape are investigated in order to better understand how human communities relate to their terrestrial and aquatic resources. The contributors go beyond the traditional ecological knowledge (TEK) literature and offer valuable insights on ecology and on land and resources management, emphasizing the perception of landscape above the level of species and their folk classification. Focusing on the ways traditional people perceive and manage land and biotic resources within diverse regional and cultural settings, the contributors address theoretical issues and present case studies from North America, Mexico, Amazonia, tropical Asia, Africa and Europe.

Trees and Shrubs of the Pacific Northwest Mark Turner, Ellen Kuhlmann, 2014-06-03.
