Modern Developments in Vacuum Electron Sources Georg Gaertner, Wolfram Knapp, Richard G. Forbes, 2020-10-09 This book gives an overview of modern cathodes and electron emitters for vacuum tubes and vacuum electron devices in general. It covers the latest developments in field emission theory as well as new methods towards improving thermionic and cold cathodes. It addresses thermionic cathodes such as oxide cathodes impregnated and scandate cathodes as well as photocathodes and field emitters the latter comprising carbon nanotubes, graphene and Spindt type emitter arrays. Despite the rise and fall of the once dominant types of vacuum tubes such as radio valves and cathode ray tubes, cathodes are continually being improved upon as new applications with increased demands arise, for example in electron beam lithography, high power and high frequency microwave tubes, terahertz imaging and electron sources for accelerators. Written by 17 experts in the field, the book presents the latest developments in cathodes needed for these applications, discussing the state of the art and addressing future trends.

Modern Developments and Applications in Microbeam Analysis Glyn Love, W.A. Patrick Nicholson, Aldo Armigliato, 2012-12-06 This supplement of *Mikrochimica Acta* contains selected papers from the Fifth Workshop of the European Microbeam Analysis Society (EMAS) on Modern Developments and Applications in Microbeam Analysis which took place from the 11 to 15 May 1997 in Torquay, UK. EMAS was founded in 1986 by scientists from many European countries in order to stimulate research in microbeam analysis and its development and application. The society now has over 350 members from more than 20 countries. An important EMAS activity is the organisation of biennial workshops which focus upon the current status and developing trends in microanalytical techniques. For this meeting EMAS chose to invite speakers on the following subjects: Standardless analysis, EPMA techniques for quantitative near surface analysis and depth profiling, Matrix corrections in Auger electron and X-ray photon spectroscopy, X-ray analysis and imaging using low voltage beams, Scanning probe and near field microscopies, EPMA of frozen biological bulk samples, Environmental SEM and X-ray microanalysis of biological materials, Quantitative elemental mapping of X-ray radiographs by factorial correspondence, X-ray spectrum processing and multivariate analysis, Thin film analysis and chemical mapping in the analytical electron microscope, Wavelength dispersive X-ray spectroscopy, High resolution non dispersive X-ray spectroscopy with state of the art silicon detectors and Recent developments in instrumentation for X-ray analysis. These invited lectures were given by eminent scientists from Europe, the USA and Australia. In addition to the introductory lectures there were poster sessions at which some 110 posters were on display.

Modern Developments in X-Ray and Neutron Optics Alexei Erko, Mourad Idir, Thomas Krist, Alan G. Michette, 2008-04-01 This volume describes modern developments in reflective, refractive and diffractive optics for short wavelength radiation. It also covers recent theoretical approaches to modelling and

ray tracing the x ray and neutron optical systems It is based on the joint research activities of specialists in x ray and neutron optics working together under the framework of the European Programme for Cooperation in Science and Technology COST Action P7 in the period 2002-2006 *Modern Developments in Electron Microscopy. Benjamin Morton SIEGEL, 1964 **Recent Advances in Electron Cryomicroscopy, Part A**, 2010-11-25 Structural genomics is the systematic determination of 3 D structures of proteins representative of the range of protein structure and function found in nature The goal is to build a body of structural information that will predict the structure and potential function for almost any protein from knowledge of its coding sequence This is essential information for understanding the functioning of the human proteome the ensemble of tens of thousands of proteins specified by the human genome While most structural biologists pursue structures of individual proteins or protein groups specialists in structural genomics pursue structures of proteins on a genome wide scale This implies large scale cloning expression and purification One main advantage of this approach is economy of scale Examines the three dimensional structure of all proteins of a given organism by experimental methods such as X ray crystallography and NMR spectroscopy Looks at structural genomics as a foundation of drug discovery as discovering new medicines is becoming more challenging and the pharmaceutical industry is looking to new technologies to help in this mission **Introduction to Electron Microscopy** Saul Wischnitzer, 2013-10-22

Introduction to Electron Microscopy Second Edition provides an introduction to the foundations of electron microscopy an outline of some practical aspects of instrument operation and discussion of the rationale of the methodology of biological specimen preparation The book seeks to provide a comprehensive understanding of the theoretical and operational aspects of the electron microscope This edition consists of two parts Part One deals with the history basic theory and operation of the electron microscope Part Two discusses steps used in material preparation for electron microscope investigation such as fixation embedding and staining techniques Biomedical researchers molecular biologists toxicologists forensic investigators and medical students will find this book a very useful reference **Symposium on Advances in Electron Metallography and Electron Probe Microanalysis**, 1962

Introduction to Microscopy by Means of Light, Electrons, X Rays, or Acoustics Theodore G. Rochow, Paul A. Tucker, 2013-06-29 Following three printings of the First Edition 1978 the publisher has asked for a Second Edition to bring the contents up to date In doing so the authors aim to show how the newer microscopies are related to the older types with respect to theoretical resolving power what you pay for and resolution what you get The book is an introduction to students technicians technologists and scientists in biology medicine science and engineering It should be useful in academic and industrial research consulting and forensics however the book is not intended to be encyclopedic The authors are greatly indebted to the College of Textiles of North Carolina State University at Raleigh for support from the administration there for typing word processing stationery mailing drafting diagrams and general assistance We personally thank Joann Fish for word processing Teresa M Langley and Grace Parnell for typing
