## **Oscar Zariski Collected Papers Volume II Holomorphic Functions And Linear Systems:**

*Oscar Zariski: Collected Papers, Volume 2* Oscar Zariski, 1979-09-26 This is the second of four volumes that will eventually present the full corpus of Zariski's mathematical contributions. Like the first volume subtitled *Foundations of Algebraic Geometry and Resolution of Singularities* and edited by H. Hironaka and D. Mumford, it is divided into two parts, each devoted to a large but circumscribed area of research activity. The first part, containing eight papers introduced by Artin, deals with the theory of formal holomorphic functions on algebraic varieties over fields of any characteristic. The primary concern in Zariski's words is analytic properties of an algebraic variety  $V$  either in the neighborhood of a point (strictly local theory) or, and this is the deeper aspect of the theory, in the neighborhood of an algebraic subvariety of  $V$  (semiglobal theory). Mumford surveys the ten papers reprinted in the second part. These deal with linear systems and the Riemann-Roch theorem and its applications again in arbitrary characteristic. The applications are primarily to algebraic surfaces and include minimal models and characterization of rational or ruled surfaces.

**Collected Papers: Theory of algebras, and finite groups** Richard Brauer, 1980 **Number Theory, Invariants, and Applications** Percy Alexander MacMahon, 1986 Some of the fifty-six papers in Volume II relate to combinatorics, but most of them investigate quite distinct areas and reveal a different side of MacMahon's mind and mathematical originality. **Percy Alexander MacMahon: Number theory, invariants, and applications** Percy Alexander MacMahon, 1978 **Collected Papers: Finite groups** Richard Brauer, 1980 Einar Hille,

Classical Analysis and Functional Analysis Einar Hille, 1975 Einar Hille is one of the very few mathematicians to make significant contributions to both classical analysis and functional analysis. This volume consists of Hille's own selection of a number of papers that highlight his career in mathematical research. One need only glance through the commentaries at the end of this volume to note that most of Hille's work on functional equations, ordinary differential equations, analytic function theory, ergodic theory, semi-groups, partial differential equations, etc., is germane to present-day research. Thus this volume should serve as a source of guidance and inspiration for today's budding young analyst. Holomorphic Functions and

rational or ruled surfaces      **Percy Alexander MacMahon: Combinatorics** Percy Alexander MacMahon, 1978 This first volume of the collected papers of MacMahon is a member of the series *Mathematicians of Our Time* and takes its place among the previously published collections of the work of Paul Erdos Einar Hille Charles Loewner George Polya Hans Rademacher Stanislaw Ulam Norbert Wiener and Oscar Zariski Gian Carlo Rota Professor of Mathematics at MIT is founding editor of the series George E Andrews the editor of this and a subsequent volume that together contain MacMahon's major papers writes that there are several compelling reasons for publishing the *Collected Papers of Percy Alexander MacMahon* 1854-1929 First MacMahon's researches in combinatorics were ahead of his time In studying the literature of MacMahon's day we find that while MacMahon was a prolific writer as these *Collected Papers* confirm his discoveries generated little work by others on combinatorics Within the past twenty years however combinatorics has undergone a remarkable renaissance and a random check through the *Science Citation Index* indicates clearly that MacMahon's work is no longer neglected Second well over twenty five percent of MacMahon's papers appeared after the publication of his historic two volume work *Combinatory Analysis* 1915-1916 This later work includes his extensive researches on determinants his book and papers on repeating patterns and numerous contributions to combinatorics notably his enumeration of the partitions of a multipartite number Furthermore less than twenty percent of all his papers are referred to in *Combinatory Analysis* the impact of *Combinatory Analysis* alone on the contemporary scientific community suggests the importance of publishing all MacMahon's papers The papers in this first volume are grouped by subject area symmetric functions 18 papers the Master Theorem 2 papers permutations 9 papers compositions and Simon Newcomb's problem 4 papers perfect partitions 4 papers distributions upon a chess board and Latin Squares 3 papers multipartite numbers 5 papers partitions 6 papers partition analysis 9 papers and plane and solid partitions 4 papers This sequence of topics closely parallels the thematic development of MacMahon's *Combinatory Analysis* Each topical group is preceded by an introduction and commentary that relates the papers to contemporary developments a summary of each of the papers and in two chapters additional commentary in the form of related papers by other mathematicians namely P Hall and D E Littlewood
