Processing ODP systems are those that support heterogeneous distributed applications both within and between autonomous organizations. Many challenges must be overcome before ODP systems can be fully realized. This book describes the recent advances in the theory and practice of developing, deploying, and managing open distributed systems. Applications of these systems include but are not limited to telecommunication, medical, and large scale transaction processing and electronic commerce systems. All of these are currently developed on distributed platforms. For anybody working in industry or research in this field, *Open Distributed Processing and Distributed Platforms* will prove an invaluable text.

Open Systems in Medicine Eckart Fleck, 1995. Aiming to improve quality in health care and diagnosis, the book discusses information processing and communication in medicine and presents a new approach. By object oriented analysis, modelling, and design, the approach enables an evolutionary development according to the needs of the medical environment. Following this approach, medical applications are realised using a heterogeneous distributed information management system. This system provides integration and communication of multimedia information for medical services. Concepts, architectures, and techniques for realisation are introduced. Clear overview by Martin Ohly and the contribution on medical terminology in clinical applications by Dr Paparoditis. The integrated hospital systems developed in the project and the telemedicine services are well described and there is an interesting account of digital signal processing. I ended by feeling more positive about the underlying strengths of the work described and admiring the achievement of delivering such a huge and broad ranging set of demonstrations in clinical practice. The book is an important record of a major contribution in the evolution of health informatics. Aiming to improve quality in health care and diagnostics, this book discusses information processing and communication in medicine and presents a new approach. *Siemens Review* volume 62 no 5 September-October 1995 p 40.
