UNIX history U the university domain and its reach into research and industry due to its early dissemination by AT T to all interested parties at almost no cost and as source code UNIX s present functionality emanated not just from AT T developers but also from many external developers who used the product and contributed their own further developments which they then put at AT T s disposal Consider the contributions of the University of California at Berkeley for example With the rising commercialization of UNIX by AT T and the current owner Novell since 1983 and with the philosophical wars between the large UNIX vendors such as Sun HP Digital IBM SCQ and the UNIX laboratory as well the more rhetorical than factual discussions between QSF and UNIX International such creative and cooperative continuing development became increasingly restricted and UNIX source code today has become unaffordably expensive and de facto inaccessible Linux has changed the situation Linux provides interested computer scientists and users with a system that revives the old UNIX tradition Linux is available for free and everyone is heartily free participatory invited but not obliged to contribute to its continuing development When I wrote the foreword to the first edition of this book in 1994 Linux because it ran on PC systems had begun to penetrate the workrooms of many computer science students and computer freaks

User-Centred Requirements for Software Engineering Environments David J. Gilmore,Russel L. Winder,Francoise Detienne,2013-06-29 The idea for this workshop originated when I came across and read Martin Zelkowitz s book on Requirements for Software Engineering Environments the proceedings of a small workshop held at the University of Maryland in 1986 Although stimulated by the book I was also disappointed in that it didn t adequately address two important questions Whose requirements are these and Will the environment which meets all these requirements be usable by software engineers And thus was the decision made to organise this workshop which would explicitly address these two questions As time went by setting things up it became clear that our workshop would happen more than five years after the Maryland workshop and thus at the same time as addressing the two questions above this workshop would attempt to update the Zelkowitz approach Hence the workshop acquired two halves one dominated by discussion of what we already know about usability problems in software engineering and the other by discussion of existing solutions technical and otherwise to these problems This scheme also provided a good format for bringing together those in the HeI community concerned with the human factors of software engineering and those building tools to solve acknowledged but rarely understood problems
