

Our Changing Atmosphere

Experiment

For this experiment you will use CO₂ data from NOAA, the National Oceanic and Atmospheric Administration to graph trends and changes to our atmosphere.

Materials:

- Gridded chart paper with 1-inch squares, one sheet per group—smaller graph paper can be used, but the result is less dramatic
- Meter stick
- Marker
- 1/2-inch sticky dots (use smaller dots if you are using smaller graph paper), 12 dots per year of data; all dots should be the same color
- Tape
- Earth globe

Assembly:

1. Use the meter stick and marker to draw a large x-axis and y-axis on the graph paper. You will need at least 14 squares of space along each axis.
2. Label the y-axis "Average monthly CO₂ data from Mauna Loa (in ppm)" and choose a scale that will accommodate values from 380 ppm to 414 ppm (if you are graphing data from earlier than 2001, you will need to adjust the scale accordingly), letting each 1-inch line equal 1 ppm along the y-axis.
3. Label the x-axis "Month" and place the numbers 1 through 12 along the x-axis, letting two 1-inch lines equal one month.
4. In the upper right corner, write the word "Year." One sheet of paper will be used for each year of data you graph.
5. Print out two years' worth of data per sheet of paper and cut into half sheets so that each group receives one year's worth of data.

To Do and Notice:

- The data you are going to graph are mean monthly atmospheric CO₂ data from Mauna Loa, collected by the National Oceanic and Atmospheric Administration (NOAA). Use the globe to locate Mauna Loa. Is it in the Northern or Southern Hemisphere?
- Write the Mauna Loa CO₂ values from your data sheet on the sticky dots one monthly value per dot. Place the dots appropriately on the graph, and also label the graph with the year in which your data were collected.
- What do you notice? When are the values the highest? The lowest?
- When graphing the data from the South Pole data, they should be added to the same graph paper (the same data are from the same year) using sticky dots that are a different color. What do you notice about the seasonal fluctuation pattern of the Northern Hemisphere and in the Southern Hemisphere? Why do you think these different patterns occur in the data?
- Tape all of the graphs together in chronological order, overlapping the "month 1" and "month 12" to create a continuous graph of multiple years' data. What do you notice?

Follow-up Questions:

1. What does this data tell you? Explain.
2. What is causing these trends? Explain by doing further research.
