Our Changing Geopolitical Premises:

Our Changing Geopolitical Premises Thomas P. Rona, 1982 *The Soviet View of U.S. Strategic Doctrine* Jonathan Samuel Lockwood, 1983-01-01 Soviet perceptions of American strategic doctrine have influenced then use of military power in foreign policy An understanding of how those perceptions are being derived at and of their specific contents is therefore essential to any reflection on direction that American defense policy should take Particularly in the field of arms control and disarmament Soviet perceptions carry severe implications for U S proposals as well as general behavior Lockwood bases his examination on Soviet sources such as newspapers periodicals radio broadcasts and books He establishes that Soviet analysts tend to project their own notions of clear strategy onto U S doctrine and intentions Starting from the premise that the Soviets mean what they say Lockwood is able to give a historical account of Soviet perceptions starting from massive retaliation up to and including Presidential Directive 59 In his final chapter the author gives possible policy strategies to successfully counteract the Soviet military policy Geopolitics and International Relations ,2021-12-13 Although we live in a globalised world territorially embedded factors are highly relevant in such domains as security economy energy environment politics diplomacy Today s analysts of world affairs are often loosely referring to geopolitics but do not always clearly define it This book therefore offers a necessary framework an introduction into the main components of geopolitical analysis an overview of the main geopolitical schools of thought as well as reflections on how technology and geopolitics affect each other in economy energy and security In addition several empirical studies are showcased each developing innovative approaches Leading authors reflect upon containment analyse geopolitical myths research geoeconomic rivalries study mental maps analyse conflict through territorially embedded variables greed motivations and apply neo medievalism to study sub state diplomacy Contributors include David Crieckemans Gyula Csurgai Luis da Vinha Manuel Duran Alexandre Lambert Antonios Nestoras and Steven Spittaels **Our Changing Geo-Political Premises (PB)** Thomas P. Rona, **The United States and the Persian Gulf** Alvin J. Cottrell, Michael Moodie, 1984-01-01 **Our Changing Geo-Political Premises** Thomas P. Rona, *Simon Dalby: A Pioneer in International Relations* Simon Dalby, Roger Boyd, 2025-06-11 This book profiles Simon Dalby s academic contributions in the fields of critical geopolitics environmental security and the intersection of international relations and the Anthropocene It includes reprints of key essays that highlight innovations in critical thought at the intersections between geopolitics environment and security Starting with an analysis of American reconstructions of the Soviet threat in the 1970s an early contribution to the emerging field of critical geopolitics subsequent papers focus on the emergent formulations of environmental security in the aftermath of the Cold War and the environmental costs of globalization Focusing on the implicit geographical framing in discourses of globalization offered a critique that extended the ambit of critical geopolitics to grapple with the issues of environmental security and the rising concern with climate change as well as the political identities invoked in that debate In the aftermath of 9 11 similar arguments about

contextualization applied to the American global war on terror and the revival of discussions of empire and its geographies both in arguments for invading Iraq as well as the wider discussions in policy discourse and popular culture Simultaneously the emergence of earth system science and the concept of the Anthropocene offered another way to highlight the dangers of fossil fueled economic activities The necessity of fundamentally rethinking the premises of security policy in light of this recontextualization is emphasized in more recent contributions on climate security and the current ecological crisis Critical geopolitics Environmental security Global war on terror Firepower in the Anthropocene

Security and Environmental Change Simon Dalby, 2013-05-08 In the early years of the new millennium hurricanes lashed the Caribbean and flooded New Orleans as heat waves and floods seemed to alternate in Europe Snows were disappearing on Mount Kilimanjaro while the ice caps on both poles retreated The resulting disruption caused to many societies and the potential for destabilizing international migration has meant that the environment has become a political priority The scale of environmental change caused by globalization is now so large that security has to be understood as an ecological process A new geopolitics is long overdue In this book Simon Dalby provides an accessible and engaging account of the challenges we face in responding to security and environmental change He traces the historical roots of current thinking about security and climate change to show the roots of the contemporary concern and goes on to outline modern thinking about securitization which uses the politics of invoking threats as a central part of the analysis He argues that to understand climate change and the dislocations of global ecology it is necessary to look back at how ecological change is tied to the expansion of the world economic system over the last few centuries As the global urban system changes on a local and global scale the world's population becomes vulnerable in new ways In a clear and careful analysis Dalby shows that theories of human security now require a much more nuanced geopolitical imagination if they are to grapple with these new vulnerabilities and influence how we build more resilient societies to cope with the coming disruptions This book will appeal to level students and scholars of geography environmental studies security studies and international politics as well as to anyone concerned with contemporary globalization and its transformation of the biosphere

Climate Change and the Bay of Bengal Sanjay Chaturvedi, Vijay Sakhuja, 2015-10-16 Climate Change and the Bay of Bengal argues that in the era of climate change radically different understandings of security and sovereignty are at work It questions the geopolitics of fear and the manner in which metanarratives of climate change tend to privilege the global and national scales over other scales especially the regional and the local The authors argue in favour of a new imagination of the Bay of Bengal space as a semi enclosed sea embedded in a large marine ecosystem under the relevant provisions of the UNCLOS that impose various obligations upon its signatories to cooperate at a regional level Such an

imagination anchored in geographies of hope should not remain confined to official domains and discourses but become a part of popular socio spatial consciousness through a regional public diplomacy reaching out to the grassroots level A Bay of Bengal regional seas programme under the auspices of UNEP should be conceptualized and operationalized in a manner that explicitly factors in climate change consequences into the existing understandings and approaches to environmental human security in the region *USSR Report* ,1986 **Review of Current Military Literature** ,1983 **Perspectives in**

Mastering Space John Agnew,Stuart Crobridge,2002-09-26 For over two hundred years the domination of some countries by others has been intrinsic to international relations with national economic and political strength viewed as essential to a nation s survival and global position Mastering Space identifies the essential features of this state centredness and suggests

an optimistic alternative more in keeping with the contemporary post Cold War climate Drawing on recent geopolitical thinking the authors claim that the dynamism of the international political economy has been obscured through excessive attention on the state as an unchanging actor Dealing with such topical issues as Japan s rise to economic dominance and America s perceived decline as well as the global impact of continued geographical change the book discusses the role of geographical organization in the global political economy and the impact of increasing economic globalisation and political fragmentation in future international relations The authors identify the present time as crucial to the global political economy and explore the possibilities of moving the world from mastering space to real reciprocity between peoples and places John Agnew is a Professor of Geography at the Maxwell School of Citizenship and Public Affairs Syracuse University Stuart Corbridge is a lecturer in Geography at the University of Cambridge and a Fellow of Sidney Sussex College
