developments Therefore as a simple prerequisite the background of the readers should have a basic knowledge in hydraulics in undergraduate level and an understanding of fundamentals of calculus

Geomorphic Analysis of River Systems

Kirstie A. Fryirs, Gary J. Brierley, 2012-09-26 Filling a niche in the geomorphology teaching market this introductory book is built around a 12 week course in fluvial geomorphology Reading the landscape entails making sense of what a riverscape looks like how it works how it has evolved over time and how alterations to one part of a catchment may have secondary consequences elsewhere over different timeframes These place based field analyses are framed within their topographic climatic and environmental context Issues and principles presented in the first part of this book provide foundational understandings that underpin the approach to reading the landscape that is presented in the second half of the book In reading the landscape detective style investigations and interpretations are tied to theoretical and conceptual principles to generate catchment specific analyses of river character behaviour and evolution including responses to human disturbance This book has been constructed as an introductory text on river landscapes providing a bridge and or companion to quantitatively framed or modelled approaches to landscape analysis that are addressed elsewhere Key principles outlined in the book emphasise the importance of complexity contingency and emergence in interpreting the character behaviour and evolution of any given system The target audience is second and third year undergraduate students in geomorphology hydrology earth science and environmental science as well as river practitioners who use geomorphic understandings to guide scientific and or management applications The primary focus of Kirstie and Gary s research and teaching entails the use of geomorphic principles as a tool with which to develop coherent scientific understandings of river systems and the application of these understandings in management practice Kirstie and Gary are co developers of the River Styles Framework and Short Course that is widely used in river management decision making and training Additional resources for this book can be found at www.wiley.com/go/fryirs_riversystems

River Dynamics

Bruce L. Rhoads, 2020-05-07 Rivers are important agents of change that shape the Earth s surface and evolve through time in response to fluctuations in climate and other environmental conditions They are fundamental in landscape development and essential for water supply irrigation and transportation This book provides a comprehensive overview of the geomorphological processes that shape rivers and that produce change in the form of rivers It explores how the dynamics of rivers are being affected by anthropogenic change including climate change dam construction and modification of rivers for flood control and land drainage It discusses how concern about environmental degradation of rivers has led to the emergence of management strategies to restore and naturalize these systems and how river management techniques work best when coordinated with the natural dynamics of rivers This textbook provides an excellent resource for students researchers and professionals in fluvial geomorphology hydrology river science and environmental policy

Afrotropical Streams and Rivers Tatenda Dalu, Frank Masese, 2024-11-09 The

Afrotropical Streams and Rivers Structure Ecological Processes and Management is a comprehensive guide that provides assessment of major rivers and tributaries in Africa Unlike other books available the editors present a thorough study of geomorphological hydrological biological and ecological processes incorporating a range of plant and animal communities while considering implications of human communities that depend upon them This book edited by a diverse cohort of researchers and or scholars is intended as an educational and practical guide for graduate students researchers and scientists who focus on the biodiversity conservation and management policy issues of the African river systems Provides a comprehensive introduction to African freshwater rivers their biota and abiotic processes Contains unique case studies on African streams and rivers Organised around an interdisciplinary approach that covers the complex aspects of conservation and management of African river systems on the continent

Landscapes and Landforms of the Horn of Africa Paolo Billi, 2022-09-30 This book focuses on regions for which until now the geomorphology was very poorly studied and relatively unknown Nevertheless the landforms and landscapes of the Horn of Africa are highly attractive diverse and in a few cases unique since they span very different environments from highland plateaus and mountains to lowlands even below sea level and coastlines with a high degree of diversity and from monsoon to arid climate conditions The main topics addressed in the book include the links between the geological evolution and the current large scale geomorphology of the Horn of Africa the large differences between the highlands and lowlands climate river hydrology and their variation through time within a climate change perspective This part of the world was home of the very first hominids The landscape in which they lived and evolved throughout the Pleistocene is described in comparison with the arid and inhospitable though immensely scenic environment of today Perennial and ephemeral rivers with very different morphology processes and hydrology drain the area and in combination with the past and recent uplift substantially contributed to provide the region with peculiar landscapes and landforms Long lasting weathering and erosion processes result in a typical inselberg landscape such as the Bur region or the currently exposed flatland of old peneplain surfaces Their changes through time induced by both natural and anthropogenic factors are addressed by a couple of case studies Though the region has few inhabitants they had to struggle to find their livelihood in a land that offers poor resources This resulted in landscape change and land degradation Examples of human impact on the landscape are presented at different scales This book provides readers interested in geography and geomorphology with essential scientific and educational information on the Landscapes and Landforms of Eritrea Djibouti and Somalia through simple though scientifically rigorous texts illustrated with several color maps and photos One main prerogative of this book is therefore to give an insight into a region of the world where for geographical and historical constraints geomorphological investigation was very limited thus enriching its intrinsic informative value

Fundamentals of Geomorphology Reader in Geography Richard Huggett, 2007-07 This extensively revised and updated edition continues to present an engaging and comprehensive introduction to the subject exploring the world s landforms from a broad systems

Gilvear, Malcolm T. Greenwood, Martin C. Thoms, Paul J. Wood, 2016-03-03 River Science is a rapidly developing interdisciplinary field at the interface of the natural sciences engineering and socio political sciences It recognises that the sustainable management of contemporary rivers will increasingly require new ways of characterising them to enable engagement with the diverse range of stakeholders This volume represents the outcome of research by many of the authors and their colleagues over the last 40 years and demonstrates the integral role that River Science now plays in underpinning our understanding of the functioning of natural ecosystems and how societal demands and historic changes have affected these systems The book will inform academics policy makers and society in general of the benefits of healthy functioning riverine systems and will increase awareness of the wide range of ecosystem goods and services they provide

Encyclopedia of World Geography R. W. McColl, 2005 Presents a comprehensive guide to the geography of the world with world maps and articles on cartography notable explorers climate and more *Rivers in the Landscape* Ellen Wohl, 2020-02-10 Rivers are the great shapers of terrestrial landscapes Very few points on Earth above sea level do not lie within a drainage basin Even points distant from the nearest channel are likely to be influenced by that channel Tectonic uplift raises rock thousands of meters above sea level Precipitation falling on the uplifted terrain concentrates into channels that carry sediment downward to the oceans and influence the steepness of adjacent hill slopes by governing the rate at which the landscape incises Rivers migrate laterally across lowlands creating a complex topography of terraces floodplain wetlands and channels Subtle differences in elevation grain size and soil moisture across this topography control the movement of ground water and the distribution of plants and animals Rivers in the Landscape Second Edition emphasizes general principles and conceptual models as well as concrete examples of each topic drawn from the extensive literature on

river process and form The book is suitable for use as a course text or a general reference on rivers Aimed at advanced undergraduate students graduate students and professionals looking for a concise summary of physical aspects of rivers Rivers in the Landscape is designed to emphasize the connectivity between rivers and the greater landscape by explicitly considering the interactions between rivers and tectonics climate biota and human activities provide a concise summary of the current state of knowledge for physical process and form in rivers reflect the diversity of river environments from mountainous headwater channels to large lowland floodplain rivers and from the arctic to the tropics reflect the diverse methods that scientists use to characterize and understand river process and form including remote sensing field measurements physical experiments and numerical simulations reflect the increasing emphasis on quantification in fluvial geomorphology and the study of Earth surfaces in general provide both an introduction to the classic foundational papers on each topic and a guide to the latest particularly insightful and integrative references A Living Landscape Stijn Arnoldussen, 2008 Today half the Netherlands is below sea level Because of this water management is of key importance when it comes to maintaining present day habitation of the Dutch low lands In prehistory however large parts of the Dutch landscape were highly dynamic due to ongoing fluvial sedimentation Vast deltaic areas with ceaseless river activity formed the backdrop against which prehistoric occupation took place Although such landscapes may seem inhospitable the often excellently preserved archaeological evidence indicates that people lived in these lowlands throughout prehistory This book describes why Bronze Age farmers were keen to settle here and how these prehistoric communities structured the landscape around their house sites at various scales Using a vast body of evidence from several large scale excavations in the Dutch river area the author reconstructs the changes in the cultural landscape over time Starting from the Middle Neolithic changing preferences for settlement site locations and changes in domestic architecture are traced in detail to the Iron Age However for proper understanding of the cultural landscape not only settlements but also graves and patterns of object deposition and their landscape characteristics are discussed By using evidence from over 50 major excavations yielding over 300 house plans this book contains by far the richest data set on Dutch Bronze Age settlements Most of these results have not previously been published in English making this book of over 500 pages a true academic treasure for an international audience The in depth presentation of Bronze Age settlement sites as well as the critical discussion of models and premises current in later prehistoric settlement archaeology have an important relevance stretching beyond the Dutch lowland areas on which it is based The wealth of high quality Dutch data is presented as a synthesized yet well annotated narrative that rises above mere site interpretation even more so due to its landscape scale focus Therefore this book is a must have for those interested in later prehistoric cultural landscapes and settlement archaeology **Rivers and Society** Malcolm Cooper, Abhik Chakraborty, Shamik Chakraborty, 2017-11-22 Rivers and their watersheds constitute some of the most dynamic and complex landscapes Rivers have sustained human communities and human societies have utilized and altered river flows

in a number of ways for millennia However the level of human impact on rivers and on watershed environments has become acute during the last hundred years or so This book brings together empirical research and theoretical perspectives on the changing conditions of a range of river basin environments in the contemporary world including the history and culture of local societies living in these river basins It provides theoretical insights on the patterns and nature of the interaction between rivers and their use by human communities The chapters are written from a variety of positions including environmental science hydrology human ecology urban studies water management historical geography cultural anthropology and tourism studies The case studies span different geographical regions providing valuable insight on the multifaceted interactions between rivers and our societies and on the changing riverscapes in different parts of the world Specific detailed examples are included from Australia Brazil France India Iran Japan the Netherlands New Zealand South Africa UK and USA Chapter 11 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license
